Title V Operating Permit Renewal Application
Fritz Winter North America, LP – Franklin, Kentucky
Permit: V-16-022 R1
Agency Interest: 129745

Dear Sir or Madam:

Please find the attached forms for renewal of the above referenced Title V Operating Permit.

As required per 401 KAR 52:020 Section 4(2)(c), renewals are to provide only the information that is new or different from the most recent source-wide permit application and a 401 KAR 52:020 Section 23 certification by the responsible official.

Fritz Winter North America, LP (FWNA) is continuing to work towards execution of an Agreed Order with Kentucky Department for Environmental Protection and the Division for Air Quality to address several of the terms and conditions in the existing Air Quality Permit referenced above. Out of that effort we expect a number of changes to the existing Air Permit that will be reflected in a new construction permit application that will be submitted to your office within the coming months.

In addition to the Administration Information form (Form DEP7007AI), we are providing requested changes and clarifications to the most recent source-wide permit application using both the Manufacturing Form (Form DEP7007B) and the Source Emissions Profile Form (DEP7007N).

Please contact Eddie Butler at eddie.butler@fritzwinter.us should you have any questions regarding this application.

Based on information and belief formed after reasonable inquiry, the statements and information contained in the permit renewal document(s) are true, accurate and complete.

Respectfully submitted,

Darryl Konsler
CEO

List names of owners and officers of the company who have an interest in the company of 5% or more.

Name	Position

Section AI.4: Type of Application

Current Status: ☑ Title V ☐ Conditional Major ☐ State-Origin ☐ General Permit ☐ Registration ☐ None

Requested Action: *(check all that apply)*

☐ Name Change	☐ Initial Registration	☐ Significant Revision	☐ Administrative Permit Amendment
☑ Renewal Permit	☐ Revised Registration	☐ Minor Revision	☐ Initial Source-wide OperatingPermit
☐ 502(b)(10)Change	☐ Extension Request	☐ Addition of New Facility	☐ Portable Plant Relocation Notice
☐ Revision	☐ Off Permit Change	☐ Landfill Alternate Compliance Submittal	☐ Modification of Existing Facilities
☐ Ownership Change	☐ Closure		

Requested Status: ☑ Title V ☐ Conditional Major ☐ State-Origin ☑ PSD ☐ NSR ☐ Other: _____

Is the source requesting a limitation of potential emissions? ☑ Yes ☐ No

Pollutant:	Requested Limit:	Pollutant:	Requested Limit:
☑ Particulate Matter	See Air Quality Permit	☑ Single HAP	
☑ Volatile Organic Compounds (VOC)	V-16-022 R1	☑ Combined HAPs	
☑ Carbon Monoxide		☐ Air Toxics (40 CFR 68, Subpart F)	
☑ Nitrogen Oxides		☐ Carbon Dioxide	
☑ Sulfur Dioxide		☐ Greenhouse Gases (GHG)	
☑ Lead		☐ Other	

For New Construction:

Proposed Start Date of Construction: *(MM/YYYY)* _____ **Proposed Operation Start-Up Date:** *(MM/YYYY)* _____

For Modifications:

Proposed Start Date of Modification: *(MM/YYYY)* _____ **Proposed Operation Start-Up Date:** *(MM/YYYY)* _____

Applicant is seeking coverage under a permit shield. ☐ **Yes** ☑ **No** **Identify any non-applicable requirements for which permit shield is sought on a separate attachment to the application.**

Section AI.5 Other Required Information

Indicate the documents attached as part of this application:

☐ DEP7007A Indirect Heat Exchangers and Turbines	☐ DEP7007CC Compliance Certification
☑ DEP7007B Manufacturing or Processing Operations	☐ DEP7007DD Insignificant Activities
☐ DEP7007C Incinerators and Waste Burners	☐ DEP7007EE Internal Combustion Engines
☐ DEP7007F Episode Standby Plan	☐ DEP7007FF Secondary Aluminum Processing
☐ DEP7007J Volatile Liquid Storage	☐ DEP7007GG Control Equipment
☐ DEP7007K Surface Coating or Printing Operations	☐ DEP7007HH Haul Roads
☐ DEP7007L Mineral Processes	☐ Confidentiality Claim
☐ DEP7007M Metal Cleaning Degreasers	☐ Ownership Change Form
☑ DEP7007N Source Emissions Profile	☐ Secretary of State Certificate
☐ DEP7007P Perchloroethylene Dry Cleaning Systems	☐ Flowcharts or diagrams depicting process
☐ DEP7007R Emission Offset Credit	☐ Digital Line Graphs (DLG) files of buldings, roads, etc.
☐ DEP7007S Service Stations	☐ Site Map
☐ DEP7007T Metal Plating and Surface Treatment Operations	☐ Map or drawing depicting location of facility
☐ DEP7007V Applicable Requirements and Compliance Activities	☐ Safety Data Sheet (SDS)
☐ DEP7007Y Good Engineering Practice and Stack Height Determination	☐ Emergency Response Plan
☐ DEP7007AA Compliance Schedule for Non-complying Emission Units	☐ Other: _____
☐ DEP7007BB Certified Progress Report	

Section AI.6: Signature Block

I, the undersigned, hereby certify under penalty of law, that I am a responsible official*, and that I have personally examined, and am familiar with, the information submitted in this document and all its attachments. Based on my inquiry of those individuals with primary responsibility for obtaining the information, I certify that the information is on knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false or incomplete information, including the possibility of fine or imprisonment.

Authorized Signature	4/23/2021 **Date**

Section B.3: Notes, Comments, and Explanations

The following Emission Units have yet to be installed: EU03, EU04, EU11, EU12, EU15, EU34, EU41, EU42, EU46, EU47, EU49, EU51, EU58, EU62, EU65 (on order/not installed), EU70, EU75
EU77 : Change Paved Roadways from EU76 to EU77 as EU76 is already identified as the ID for the diesel storage tank.
EU11-EU16: Change operating limit to 91,586 tpy; incorrect assumption to split 50:50
EU17: Change description from "Melt Shop Baghouse Waste Dust Silo" to "Core/Mold Baghouse Waste Dust Silo"
EU19-EU21, EU35A-EU35B: Change hourly capacity to 25 tph to reflect pnuematic conveying truck capacity
EU21-EU34,EU48,EU49: Combine into a single emission unit described as "Moldmaking and Sand Handling" with Emission Unit ID EU21 to match SCC description
EU33-EU34: Change maximum hourly capacity as 1975 tph for the group; incorrect assumption to split 50:50
EU50-EU51: Change maximum hourly capacity to 25.3 tph for group; incorrect assumption to split 50:50
EU68, EU69 and EU71: Change emission unit name to Paint Line #3, Paint Line #2 and Paint Line #1, respectively

Section N.4: Notes, Comments, and Explanations
EU01: Combine EU01 and EU02 as SCC includes all charge handling activites
EU01: Change name from Scrap Steel Storage to Change Handling to match SCC and industry norms
EU01: APCD CU01 added to address secondary capture of emissions
EU03 and EU04: Not installed at this time
EU05: Change name from Refractory Burner #1 to Ladle Preheater #1 to better identify emission unit
EU06: Change name from Refractory Burner #2 to Ladle Preheater #2 to better identify emission unit
EU05 and EU06: APCD CU01 added to address secondary capture of emissions

Section N.4: Notes, Comments, and Explanations
EU11-EU16: Change operating limit to 91,586 tpy; incorrect assumption to split 50:50
EU11, EU12 and EU15: Not installed at this time
EU11-EU16: Change maximum hourly capacity as 25.3 tph for each group; incorrect assumption to split 50:50
EU13 and EU14: Combine to a single EU ID EU13 and name "Molten Metal Transfer"
EU17: Change description from "Melt Shop Baghouse Waste Dust Silo" to "Core/Mold Baghouse Waste Dust Silo"
EU19: Change hourly capacity to 25 tph to reflect pnuematic conveying truck capacity
EU20: Change hourly capacity to 25 tph to reflect pnuematic conveying truck capacity
EU13, EU14, EU18: Added Control Device ID CU01 as secondary capture

Section N.4: Notes, Comments, and Explanations
EU21: Change hourly capacity to 25 tph to reflect pnuematic conveying truck capacity.
EU21 - EU30: Combine into a single emission unit described as "Moldmaking and Sand Handling" with Emission Unit ID EU21 to match SCC description

Section N.4: Notes, Comments, and Explanations
EU31 thru EU34: Combine into a single emission unit identied as "Moldmaking and Sand Preparation (EU21)"
EU33-EU34: Change maximum hourly capacity as 197 tph for the group; incorrect assumption to split 50:50
EU35A: Change hourly capacity to 25 tph to reflect pnuematic conveying truck capacity
EU35B: Change hourly capacity to 25 tph to reflect pnuematic conveying truck capacity
EU35A and EU35B: Bin Vents (CU18 and CU19) vent inside with secondary capture via CU08 through stack ST09
EU34: Not installed at this time

Section N.4: Notes, Comments, and Explanations
EU48 thru EU49: Combine into a single emission unit identied as "Moldmaking and Sand Preparation (EU21)"
EU50-EU51: Change maximum hourly capacity to 25.3 tph for group; incorrect assumption to split 50:50
EU41, EU42,EU46, EU47, EU49: Not installed at this time

Section N.4: Notes, Comments, and Explanations
EU50-EU51: Change maximum hourly capacity to 25.3 tph for group; incorrect assumption to split 50:50
EU51 and EU58: Not installed at this time

Section N.4: Notes, Comments, and Explanations
EU61 and EU62: To match SCC, remove shot maximum hourly capacity and replace with metal hourly capacity for the group
EU64: Change name for Grinding #1 to Autogrinder #1, replace capacity with metal hourly capacity for the group
EU65: Change name for Grinding #2 to Autogrinder #2, replace capacity with metal hourly capacity for the group
EU66 and EU67: Combine and describe as "Machining " and identify as EU66
EU66-EU67: Cartridge Filters (CU13a-j) vent inside with secondary capture via Paint Line Fabric Filter stack ST15c
EU68: Change name to Paint Line #3
EU62, EU65 and E70: Emission Unit is not installed
EU69: Change name to Paint Line #2
EU71: Change name to Paint Line #1

Section N.4: Notes, Comments, and Explanations
EU75: Gasoline tank is not installed
EU77 - Change Paved Roadways from EU76 to EU77 as EU76 is already identified as the ID for the diesel storage tank.

PSD Permit Application

Document to Support Air Permit Application Correction

Table of Contents

Section 1 Project Introduction 1-1

1.1 Document Summary 1-1
1.2 Introduction 1-1
1.3 Project Background 1-1
1.3.1 Applicable Permit Limits 1-1
1.3.2 Initial Performance Test Results (CU01/ST02) – Phase 1 1-3
1.3.3 Performance Test Results – Phase 2 1-3
1.3.4 Other Test Results 1-3
1.3.5 Performance Test Results Analysis 1-4
1.4 Revisions to Previous Permit Applications 1-5
1.5 NSR Applicability 1-5
1.6 Application Contents 1-6

Section 2 Process Description 2-1

2.1 Process Overview 2-1
2.2 Melt Shop 2-2
2.3 Sand Plant 2-3
2.4 Core Shop 2-3
2.5 Mold Assembly 2-4
2.6 Pouring, Cooling and Shakeout 2-4
2.7 Finishing 2-5
2.8 Painting 2-6
2.9 Utilities 2-6

Section 3 Emission Calculations 3-1

3.1 Emission Calculations 3-1
3.2 Particulate Emission Calculations 3-1
3.3 Gaseous Criteria Pollutants and Organic HAP Emission Calculations 3-2

Section 4 Regulatory Analysis 4-1

4.1 Prevention of Significant Deterioration (PSD) 4-1
4.2 National Emission Standards for Hazardous Air Pollutants (NESHAPs) 4-1
4.2.1 NESHAPS for a minor source of HAP (40 CFR 63 Subpart ZZZZZ-NESHAP for Iron and Steel Foundries Area Sources): 4-1
4.2.2 NESHAPS for a major and minor sources of HAP (40 CFR 63 Subpart ZZZZ-NESHAP for Stationary Reciprocating Internal Combustion Engines RICE)): 4-2

4.2.3 Subpart CCCCCC—National Emission Standards for Hazardous Air Pollutants for Source Category: Gasoline Dispensing Facilities....4-2
4.2.4 Subpart XXXXXX—National Emission Standards for Hazardous Air Pollutants Area Source Standards for Nine Metal Fabrication and Finishing Source Categories 4-2
4.2.5 Subpart HHHHHH—National Emission Standards for Hazardous Air Pollutants: Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources....4-2
4.3 New Source Performance Standards (NSPS)....4-2
4.3.1 40 CFR 60 Subpart Z—Standards of Performance for FerroalloyProduction Facilities 4-2
4.3.2 40 CFR 60 Subpart IIII - Standards of Performance for StationaryCompression Ignition Internal Combustion Engine 4-3
4.4 State Specific Rules 4-3
4.4.1 401 KAR 51:010 Attainment Status Designations....4-3
4.4.2 401 KAR 51:017. Prevention of Significant Deterioration of Air Quality. 4-3
4.4.3 401 KAR 52:020. Title V Permits. 4-3
4.4.4 401 KAR 52:050. Permit Application Forms. 4-3
4.4.5 401 KAR 55:005. Significant Harm Criteria....4-3
4.4.6 401 KAR 55:020. Abatement Strategies. 4-4
4.4.7 CFR Part 61 National Emission Standards for Hazardous Air Pollutants....4-4
4.4.8 401 KAR 59:005. General Provisions. 4-4
4.4.9 401 KAR 59:010. New Process Operations. 4-4
4.4.10 401 KAR 59:050. New Storage Vessels for Petroleum Liquids. 4-5
4.4.11 401 KAR 59:105. New Process Gas Streams. 4-5
4.4.12 401 KAR 59:225. New Miscellaneous Metal Parts and Products Surface Coating Operations. 4-5
4.4.13 401 KAR 60:005. 40 CFR Part 60 standards of performance for new stationary sources. 4-5
4.4.14 401 KAR 63:002. 40 CFR Part 63 national emission standards for hazardous air pollutants. 4-5

Section 5 BACT Analysis 5-1

5.1 Changes from Prior Application 5-1
5.2 BACT Introduction 5-2
5.3 Study Methodology....5-3
5.4 Emission Units and Pollutants....5-5
5.5 Analysis Introduction and Prioritization....5-5
5.6.1 RBLC Information Quality....5-6
5.6.2 RBLC Identified Pollutants and Emission Rates....5-6
5.6.3 CO and VOC Emission Quantification and Variability 5-6
5.6.4 Commingling of Process Emissions 5-7

5.6.5 Air Volume and Capture Rates 5-7
5.7.1 Step 1 – Identify All Control Technologies 5-8
5.7.2 Step 2 – Eliminate Technically Infeasible Options 5-8
5.7.3 Step 3 – Rank Remaining Technically Feasible Control Options 5-9
5.7.4 Step 4 – Evaluate Remaining Control Technologies 5-10
5.7.5 Step 5 – Selection of BACT 5-10
5.8 Particulate BACT 5-10
5.8.1 Step 1 – Identify All Control Technologies 5-11
5.8.2 Step 2: – Eliminate Technically Infeasible Options 5-14
5.8.3 Step 3: – Ranking Remaining Control Technologies by Control Effectiveness 5-15
5.8.4 Step 4: Evaluate Most Effective Controls and Document Results 5-15
5.8.5 Step 5: Select BACT 5-15
5.9 CO BACT 5-16
5.9.1 Step 1 – Identify All Control Technologies 5-16
5.9.2 Step 2: Eliminate Technically Infeasible Options 5-18
5.9.3 Step 3: Ranking Remaining Control Technologies by Control Effectiveness 5-19
5.9.4 Step 4: Evaluate Most Effective Controls and Document Results 5-19
5.9.5 Step 5: Select BACT 5-20
5.10 VOC BACT 5-20
5.10.1 Foundry Operations 5-21
5.10.2 Coating Operations 5-27
5.11 BACT for Utility Operations 5-31

Section 6 Air Quality Analysis 6-1

6.1 Modeling Methodology 6-1
6.1.1 Model Selection 6-2
6.1.2 Meteorological Data 6-2
6.1.3 Building Downwash 6-2
6.1.4 Model Terrain 6-3
6.1.5 Urban/Rural Determination 6-3
6.1.6 Receptor Grid Coordinate System 6-3
6.2 Modeled Emission Sources 6-4
6.3 Class II Significance Analysis 6-4
6.4 Ambient Monitoring Requirements 6-5
6.4.1 Pre-Construction Monitoring Waiver Request 6-5
6.4.2 Ambient Background Concentrations 6-5
6.5 Regional Inventory Data 6-6
6.6 Cumulative Modeling Analysis 6-7
6.6.1 National Ambient Air Quality Standard Modeling Results 6-7
6.6.2 PSD PM_{10} and $PM_{2.5}$ Increment Modeling Results 6-7

6.7 Class I Significance Analysis 6-8
6.7.1 Class I Area Screening (Q/D) Analysis 6-8
6.7.2 Class I Increment Evaluation 6-8
6.8 Tier 1 Analysis – Consideration of Modeled Emission Rates for Precursors (MERPs) 6-9
6.8.1 $PM_{2.5}$ MERPs Assessment 6-9
6.8.2 Ozone MERPs Assessment 6-11
6.9 Toxics Modeling 6-11

Section 7 Other Impact Analysis 7-1

7.1 Class I Visibility 7-1
7.2 Secondary Impacts on Soil and Vegetation 7-2
7.3 Demographics 7-3
7.4 Construction Impacts 7-3
7.5 Greenhouse Gas Impacts 7-4

List of Appendices

Appendix A Tables
Appendix B Figures
Appendix C Emission Calculations
Appendix D Safety Data Sheets
Appendix E CU01/ST02 - CO Control Option Supporting Data
Appendix F CU06/ST07 - CO Control Option Supporting Data
Appendix G CU08/ST09 - CO Control Option Supporting Data
Appendix H CU01/ST02 - VOC Control Option Supporting Data
Appendix I CU06/ST07 - VOC Control Option Supporting Data
Appendix J CU08/ST09 - VOC Control Option Supporting Data
Appendix K CU07/ST08 - VOC Control Option Supporting Data
Appendix L Coating - VOC Control Option Supporting Data
Appendix M Coating Permits - Similar Operations
Appendix N Air Dispersion Modeling Protocol
Appendix O Pre-Construction Monitoring Waiver
Appendix P Off-Site Sources
Appendix Q VISCREEN Results
Appendix R KDAQ Permit Application Forms
Appendix S Emission Estimation Supporting Information
Appendix T Air Dispersion Modeling Electronic Files

Section 1
Project Introduction

1.1 Document Summary

This document provides an application to correct Air Quality Permit V-16-022 R1 (Air Permit) issued on November 25, 2017, to Fritz Winter North America LP (FWNA). The necessary corrections were identified as a result of required performance testing, air permit required monitoring and recordkeeping and a detailed review of the above identified air permit.

To reduce the resources required to review and process this application, the previous application has been used as a base document for any necessary text changes. During review of historical project information, several Kentucky Division for Air Quality (DAQ) questions, issues and concerns regarding previous applications were identified and addressed within this document. To conserve as much of the original application as possible, Figures and Tables have been consolidated into appendices.

Additional project background information is provided in this section.

1.2 Introduction

As authorized by the Air Permit, FWNA constructed and operates a gray iron foundry and machining operation to produce automotive parts, predominantly brake rotors. The facility is located in the Wilkey North Industrial Park located in Franklin, Simpson County, Kentucky. The facility is located approximately five miles north of Franklin and 13 miles south of BowlingGreen along State Route 31W.

The facility is listed under the Standard Industrial Classification (SIC) code of 3714 - Motor Vehicle Parts and Accessories. The Air Permit restricts the maximum production capacity of the foundry to 91,586 tons of molten gray iron poured per year.

1.3 Project Background

As a result of Air Permit required initial performance testing, it was determined that certain established emission limitations were not met. This section identifies the units and pollutants where emission limitations were exceeded and provides a brief analysis of likely causes.

1.3.1 Applicable Permit Limits

In addition to and in concert with other applicable sections, Section B (Foundry Operations), Section B (Coating Operations) three.c., Section D.5, Section D.7, Section G.4.e, Section G.4.h, Section G.5. and Section H.2. of Air Quality Permit V-16-022 R1 issued on November 25, 2017, includes provisions to conduct performance (emission) testing to verify compliance with permit established emission limitations.

During 2018 and prior to the installation of Control Device CU08 with Stack ST09 (identified in a format of Control Device ID/Stack ID, e.g., CU08/ST09 throughout this document), FWNA was to comply with Alternative Operating Scenario #2 provided for in Section H of the referenced air permit.

Alternative Operating Scenario #2 allowed the foundry to temporarily exhaust emission units EU33, EU34, EU36, EU37, EU38, EU43, EU44, EU45, EU46, EU47, EU48, EU49, EU50, EU51, EU52, EU59 to Baghouse CU01 (CU01/ST02) prior to the installation of CU08/ST09. Operating per Alternative Operating Scenario 2 is identified in the Air Permit as Phase 1 per the note at the bottom of the emission unit table provided in Section B (Foundry Operations).

When FWNA is conducting production activities under Alternative Operating Scenario #2, Air Permit Section H.2 (i.e., Phase 1) establishes PM, PM_{10} and $PM_{2.5}$ emission limitations for CU01/ST02 as shown in Table 1-1 provided in Appendix A (all report tables may be found in Appendix A).

Air Permit Section D.5 provides emission limitations for CU06/ST07 and CU11/ST12. These emission limits are effective when operating under Phase 1 as well as once Baghouse CU08 is installed (i.e., Phase 2).

Section D.5 also identifies PM, PM_{10} and $PM_{2.5}$ emission limitations for CU01/ST02 and CU08/ST09 during Phase 2 (once Baghouse CU08/ST09 has been installed and the exhaust ducts from emission unit IDs EU33, EU34, EU36, EU37, EU38, EU43, EU44, EU45, EU46, EU47, EU48, EU49, EU50, EU51, EU52, EU59 are moved from CU01/ST02 to CU08/ST09). [It is beneficial to note the facility continues to operate the existing coating operations under Section H. Alternative Operating Scenario #1].

Table 1-2 provides those Section D.5 identified PM, PM_{10} and $PM_{2.5}$ emission limitations during Phase 2 for CU01/ST02 and CU08/ST09 as well as PM, PM_{10} and $PM_{2.5}$ emission limitations during both Phase 1 and Phase 2 for CU06/ST07 and CU11/ST12.

Comparing Table 1-1 and 1-2 it is worth noting that CU01/ST02 PM, PM_{10} and $PM_{2.5}$ emission limitations did not change to reflect the movement of a number of particulate matter generating sources from CU01/ST02 to CU08/ST09 as the facility transitioned from Phase 1 to Phase 2 operations. Put another way, prior to transitioning to CU08/ST09, a number of units with condensable particulate matter emissions were ducted to CU01/ST02. The CU01/ST02 emission limitations were not altered to reflect the possibility of the increased condensable emissions associated with these units during Phase 1 operations.

Table 1-3 provides the volatile organic compound (VOC) and carbon monoxide (CO) emission limitations for CU1/ST02, CU07/ST08 (VOC only) and CU08/ST09. These emission limitations are effective during both Phase 1 and Phase 2. **Similar to the PM, PM_{10} and $PM_{2.5}$ issued identified above, CU08/ST09 has identified VOC and CO emissions rates that were not addressed within the emission limitations for CU01/ST02 when it was operating under Phase 1.**

Finally, Air Permit Section B.3.h. identifies performance test requirements for the Shakeout Conveyor (EU53) to determine compliance with VOC and CO BACT emission limits identified in Section B.2.e. and f. These emission limits are provided in Table 1-4 and apply during both Phase 1 and 2.

1.3.2 Initial Performance Test Results (CU01/ST02) – Phase 1

During Phase 1 the initial performance testing was conducted for the Melt Shop Baghouse (CU01/ST02) and Sand System Baghouse (CU06/ST07) in November 2018 and December 2018. Results of those tests are provided in Table 1-5 and Table 1-6 for CU01/ST02 and CU06/ST07, respectively.

The CU06/ST07 results provided in Table 1-6 assumed the only source of VOC and/or CO emissions were from the Shakeout Conveyor (EU53), and therefore any VOC and CO emissions determined at the stack were assigned to the Shakeout Conveyor (EU53).

The performance test of the CU01/ST02 yielded results that exceeded the permitted emission rates for PM_{10}, $PM_{2.5}$, VOC, and CO. **Again, as identified above, CU01/ST02 emission limitations in the Air Permit were not changed to reflect the emissions from the units temporarily ducted to CU01/ST02 during Phased 1 operations**.

The performance test of CU06/ST07 determined PM_{10} and $PM_{2.5}$ emissions exceeded applicable emission limits identified in Table 1-6 or correspondingly identified in Table 1-2.

As stated above, since CU06/ST07 was assumed to have no other sources of VOC and CO, it was inferred that those emission rates determined from testing CU06/ST07 were from the Shakeout Conveyor (EU53) and therefore indicated the Shakeout Conveyor exceeded the allowable VOC emission rate provided in Table 1-4.

1.3.3 Performance Test Results – Phase 2

Section D.5 and D.6 of the Air Permit includes provisions to repeat performance testing following completion of Phase 2 construction activities. The Phase 2 construction activities included installation of Baghouse CU08/Stack ST09 and then moving the exhaust ducts for several emission units from CU01/ST02 to CU08/ST09.

The performance test was conducted and the resulting pollutants in excess of emission limitations were $PM_{2.5}$, VOC, and CO for CU01/ST02 and $PM_{2.5}$ and VOC from CU06/ST07 and EU53, respectively. Note $PM_{2.5}$ emissions from CU01/ST02 and CU06/ST02 were only slightly above permitted limitations as was the VOC emissions from EU53.

A summary of the performance test results is provided and compared to the corresponding emission limits in Table 1-7 and Table 1-8.

1.3.4 Other Test Results

In addition to the above tests, performance tests have been conducted on Acid Scrubber CU07 (Stack ST08) and the Phase 2 installation of the Sand/Mold Baghouse CU08 (Stack ST09). Considering the results, these performance tests identified other possible Air Permit changes that could be warranted including the following:

- Acid Scrubber (CU07/ST08), test conducted November 2018, yielded emissions of CO that were unexpected with no underlying permitted emission limitations. [It is believed this is an anomaly and no change is being made to the permit application]

- Acid Scrubber (CU07/ST08), test conducted November 2018, yielded emissions of VOC that were 84% of the allowable limit. This testing was conducted at a production rate which was approximately 13% of the allowable.

1.3.5 Performance Test Results Analysis

The following provides a discussion of the likely causes of the excess emissions.

CU01 and CU06 PM_{10} and $PM_{2.5}$ Emission Limit Exceedances

From review of the above PM results, the minimal PM outlet loading indicates the baghouses are performing extremely well at removing filterable PM. The results of the performance test show the measured emission rates meet the current permit PM BACT emission limitations. Potential causes of the emissions limit exceedance include:

- The exceedances of the PM_{10} and $PM_{2.5}$ emission limitation exceedances is the results of the prior permit application's failure to address condensable particulate emissions that can occur during foundry melting, pouring, cooling and/or shakeout operations. No foundry identified in the RACT/BACT/LAER Clearinghouse (RBLC) have PM_{10} and $PM_{2.5}$ emission rates, including condensable, at these low emission rates.
- **As identified above, another reason the CU01/ST02 PM_{10} and $PM_{2.5}$ emission limitations were exceeded was a result of the additional emission units and their associated condensable particulate emissions venting to CU01/ST02 during Phase 1 while no accommodation was made in the Air Permit.**

To address this issue a revised BACT evaluation has been conducted to determine appropriate PM_{10} and $PM_{2.5}$ emission rates for these operations.

CU01/ST02, CU06/ST07 and EU53 VOC/CO Emission Limit Exceedance

There are several factors that likely led to the excess VOC and CO emission limitations from these stacks and the emission unit. Those factors include the following:

- As identified above regarding the Phase 1 PM_{10} and $PM_{2.5}$ emission limitations, the Air Permit did not consider VOC and CO emission rates from the additional emission units vented to CU01 during Phase 1 when establishing the Air Permit limits.
- Second, VOC and CO emissions vary across pouring, cooling and shakeout based on a number of factors (e.g., cooling time). When assessing compliance with VOC and CO emission limitations it is important to aggregate the performance test results across the applicable stacks and compare those results against a grouped emissions limit for the selected units. The Air Permit did not provide for this allowance.
- Third, it does not appear the VOC Shakeout BACT determination accurately reflects the expected VOC emission rate. The prior BACT identified Waupaca Foundry as having a VOC emission limit of 0.1 lb/ton of metal. A representative of Waupaca confirmed compliance cannot be demonstrated with the VOC emission limitation.
- Finally, we believe secondary capture of some emissions is occurring and being vented to these stacks resulting in greater emissions of VOC and CO.

To address the above issue a revised BACT evaluation has been conducted to determine appropriate VOC and CO emission rates for these operations. In addition, the revised Air Permit

must allow for aggregation of VOC and CO emission rates across multiple air pollution control devices to allow permit flexibility when assessing compliance at the emission unit level.

1.4 Revisions to Previous Permit Applications

Given the results of the above performance tests, the knowledge of other available foundry emissions information and the ongoing Air Permit Monitoring and Recordkeeping, this revised permit application has been prepared to address the above emission limitation exceedances. These changes are summarized in Table 1-9, 1-10 and 1-11 by comparing the expected revised emission rates and BACT to the same values provided in the current Air Permit.

Important aspects of each table can be summarized as follows:

- The largest Table 1-9 increase is a result of revisions made to the Coremaking VOC emission rates to incorporate increase emissions from resin, catalyst and/or the use of core release. A violation did not occur due to the low production rate experienced during the test. The table shows a reduction in PM and PM_{10} potential emission rates.
- Table 1-10 shows a decrease in potential emissions of PM and PM_{10} (approximately five tpy) with a slight increase in $PM_{2.5}$ emissions (approximately 10 tpy).
- Table 1-11 shows an overall potential increase in VOC and CO of approximately 43 and 22 tpy, respectively for these stacks. [note: these differences do not equate to the same change identified in Table 1-9 due to other emission units not addressed in BACT limits provided in Tables 1-10 and 1-11.

In addition to the changes identified in Tables 1-10 and 1-11, the revised application includes requests for the following changes:

- Remove several emission units identified in the initial and revised permit application that will not be installed including Scrap Drying (EU03), Scrap Cleaning (EU04), Holding Furnace #1 (EU11), Holding Furnace #2 (EU12), Mold Shop Baghouse Waste Dust Silo (EU58), Gasoline Storage Tank (EU75), and Paint Booth #3 (EU70). See Table 2-1 as referenced in Section 2.
- Change emission unit descriptions and names. See Table 2-1 as referenced in Section 2.
- Removal of BV-01A, BV-01B, BV-02A, and BV-02B as they are no longer used.
- Increase Core Release (EU39-EU42) usage to reflect usage rates;
- Increase Core Wash (EU43, EU79-EU81) usage to reflect usage rates;
- Remove shotblast media limit (EU61 and EU62) as the emission factor is based on tons of metal processed;
- Remove bentonite, silica, bond, and other usages not material to emission calculations and associated limits.
- Increase coremaking catalyst (EU39-EU42) usage to reflect potential usage rates;
- Add Rust Preventative (EU82) and Snag Grinding (EU77 and EU78) emission units.
- Change Section H, Alternative Operating Scenario 1, 1.c.Thinner (EU68 and EU69) usage to reflect operational needs.

1.5 NSR Applicability

The initial installation and subsequently issued permit estimated emissions above the Prevention of Significant Deterioration (PSD) major source threshold for carbon monoxide (CO). In addition, the

project has significant emission rates of particulate matter (PM), PM with an aerodynamic diameter of less than 10 microns (PM_{10}), and PM with an aerodynamic diameter of less than 2.5 microns ($PM_{2.5}$). Revised emissions calculations now project that potential volatile organic compounds (VOCs) emissions will exceed the major source threshold.

1.6 Application Contents

This permit application includes: a process description (Section 2), a summary of the expected air emissions (Section 3), a regulatory analysis of the proposed project (Section 4), a Best Available Control Technology (BACT) analysis (Section 5), the required air quality modeling analysis (Section 6), and an assessment of other impacts (Section 7). The required Kentucky Division of Air Quality (DAQ) air permit application forms may be found in Appendix R.

Section 2
Process Description

2.1 Process Overview

The process of producing cast iron metal parts first involves fabricating a green sand mold and then filling it with molten iron. Once the metal cools and solidifies, the mold is broken to recover the cast metal part which then undergoes machining and final finishing. Figures are provided in Appendix B and Figure 2-1 provides a simplified process flow diagram of the overall foundry and machining process.

The mold making process occurs in two steps. First the outer part of the mold is formed by filling two halves of a reusable steel frame with green sand. Green sand consists of silica sand, bentonite, and a carbon blend, such as seacoal or other carbonaceous material.

Green sand is produced in the sand plant. Green sand raw materials are delivered to the facility by truck or rail and stored in silos. After both halves of the mold frame are filled with green sand, the green sand is compacted and stamped with the shape of the desired metal casting. Certain metal parts require portions of the casting to be hollow. To make these hollow sections, a separate core must be fabricated and placed in the green sand mold.

The core is subject to intense heat and stress and must be fabricated using silica sand bound by a two-part phenolic urethane binder. The core is coated with a water based abrasive resistant coating to provide additional protection during the pouring of molten metal. Once the core is placed into the bottom half of the green sand mold, the top half mold frame is placed on top of the bottom half frame and conveyed to the pouring (casting) area.

Molten gray iron is produced at the melt shop in electric induction furnaces where scrap iron and various alloys are weighed out according to the desired specifications and heated. Molten iron is then transferred into a transport ladle and moved to a pouring furnace. Here the molten iron is poured into the assembled mold. The iron filled mold is then conveyed to a cooling tunnel where the iron is allowed to cool and solidify. Once solidified, the mold is broken apart in a "shakeout" area and the metal frames are taken off and sent back to the mold assembly area for reuse. Mold and core sand is recovered and sent to the sand plant for reuse. Rough castings are further cooled by forced air and sent to the finishing area where they first go through a shot blasting (i.e., cleaning) process, followed by grinding, machining, and finally a protective zinc coating is applied.

The following sections describe the production process in more detail. Air emission units are identified with the letters “EU” followed by a unique number. Emission control units are identified with the letters “CU.” Emission points that vent to the atmosphere through a stack are identified by the letters “ST.”

Emission unit Identification numbers, descriptions and the requested description changes incorporated into this application are provided in Table 2-1.

Tables 2-2 and 2-3 identify the emission control unit and stack for each emission unit by identification number and description. These tables also provide the following information:

- Identify where emissions from a control device are captured and vented from an alternative control device stack;
- Similar to Table 2-1, identify where emission units have been combined with this application;
- Identify where an emission unit, air pollution control device and/or stack is not installed at the time of the application;
- Similar to Table 2-1, identify emission units, air pollution control devices and/or stacks that will not be installed.

2.2 Melt Shop

A process flow diagram of the melt shop operations is presented in Figure 2-2. Raw materials delivered to the melt shop for production of gray iron include; scrap steel or iron, various alloys, and fluxing agents. Raw materials are delivered to the facility by rail or truck and stored inside the building. FWNA receives scrap as a raw material. Scrap is managed per the pertinent requirements of the National Emission Standards for Hazardous Air Pollutants for Iron and Steel Foundries Area Sources as codified in 40 Code of Federal Regulations (CFR) Part 63 Subpart ZZZZZZ (the Foundry Area Source Rule).

The following describes the Charge Handling emission unit (EU01). Incoming scrap is stored in bins inside the building and transferred to weigh scales for processing using an overhead crane fitted with an electromagnet. Alloys and fluxes are stored in designated areas inside the building. These additives include carbon, magnesium, molybdenum, copper, chromium, vanadium, and niobium. The alloy storage area is designed with air intakes to draw in fugitive dust and duct it to the Melt Baghouse (CU01). Alloys and additives are added manually to the furnace, according to specifications and analysis.

Induction furnaces are the cleanest form of melting iron. The scrap is melted by heat generated by passing a high amperage electric current through coils surrounding the steel jacket of the furnace. The alternating current in the coil induces an internal current in the scrap metal inside the furnace that in turn produces enough heat to melt the scrap and alloys. There are a total of four induction furnaces (EU07-EU10) with a capacity to produce 25.3 tons per hour (TPH) of molten iron. Prior to heating a pivoted ring hood is lowered over the top of the furnace that collects emissions generated during the melting process. Induction furnace emissions are vented to the Melt Baghouse (CU01) then is exhausted via stack ST02.

Flux added to the molten metal extracts impurities from the melt and forms a slag at the surface of the molten metal. Since clean scrap is used there is only a small number of impurities that need to be removed. The slag is removed from the surface of the molten iron by raising the hood slightly and using a long-handled scoop, manually skimming off the top of the molten metal. The slag is place in a small portable dumpster next to the furnace. When the iron in the induction furnace meets the specific elemental analysis and consistency, the hood is raised, and the furnace is tilted so the molten iron flows into a transport ladle.

To prepare for casting, the transport ladle is conveyed (Hot Metal Transfer – EU13) to the pouring area where the molten iron is poured from the transport ladle into one of two electrical induction pouring furnaces (EU15-EU16).

The induction furnaces, hot metal transfer and pouring furnaces are vented to the Melt Baghouse (CU01).

The pouring furnaces are equipped with small natural gas burners designed to initially heat the vessel when first brought into service from a cold start, and to keep the pouring spout hot so the molten iron does not cool against cold refractory when being poured.

Baghouse dust collected from the Melt Baghouse is conveyed to the Melt Baghouse Waste Dust Silo (EU17). The waste dust silo is equipped with a bin vent filter (CU02). The bin vent emission point is designated as ST03.

2.3 Sand Plant

There are three basic raw materials used to make the green sand mold (EU33-EU34). These are: silica sand; bentonite, which is a clay material that acts as the glue to hold the sand in the desired shape; and a carbon source, commonly a blend of bentonite and coal dust, commonly referred to as seacoal, or some other carbonaceous material which minimizes sand sticking to the iron casting. Figure 2-3 provides a process flow diagram of the sand plant.

Raw materials for the sand plant are delivered to the facility by truck and offloaded pneumatically into dedicated storage silos (EU19-EU21). Each silo has its own bin vent filter to control particulate emissions (CU03-CU05) and their associated emission points are ST04-ST06. From the silos, materials are pneumatically transferred to day bins and then to weigh hoppers . Specific proportion of each material is placed into the green sand mixers for blending. Recycled sand from the shakeout operation is also added to the green sand mixer. Most of the recovered sand from the shakeout process is recycled back into the green sand process. This equipment operates continuously and/or semi-continuously and the emissions unit is identified as Mold Sand Handling and Preparation (EU22).

Some of the sand (approximately 5%) must be purged from the mold sand system so that the residual core sand binder decomposition byproducts do not accumulate. This waste sand is sent to the waste sand storage silo (EU57) where it is later shipped off site for recycling or to a landfill. Like all other silos in the foundry the waste sand storage silo has a bin vent filter (CU10) and vents to atmosphere through emission point ST11. All of the sand system day bins, weigh hoppers and mixers are ducted to the Sand Plant Baghouse (CU06) and vents to the atmosphere through stack ST07 (see Tables 2-2 and 2-3).

2.4 Core Shop

To make the required voids and hollows in a brake rotor casting, a specially shaped, structurally sound, and dimensionally stable core needs to be fabricated and placed into the green sand mold before mold assembly and casting. Figure 2-4 provides the process flow diagram for the core shop.

Core silica sand is delivered to the facility by truck and pneumatically conveyed into one of two core silica sand storage silos (EU35A-EU35B). As required, core sand is pneumatically conveyed from a silo through a sand classifier that uses air to remove fine sized particles to produce a

uniform grain sized sand feed stream. The classified sand is then pneumatically conveyed to a sand bin for temporary storage. To make the core strong enough to remain intact during the molten iron casting process, the core must be especially strong. FWNA uses the phenolic urethane cold box (PUCB), or coldbox method of core production. In the coldbox process, silica sand from the sand bin is fed to a weigh hopper before being mixed with a two-part phenolic resin and hardener in an enclosed mixer. The sand classifier, transfer of sand-to-sand bin and then the transfer of sand to the weigh hopper comprise the Core Sand Handling and Preparation emission unit (EU36).

The blended core sand is then sent to one of four automated core machines (EU39- EU42). After the resin and sand mixture is shaped in the core machines, an amine gas (vaporized dimethyl propylamine) is injected through the porous phenolic urethane resin/ silica sand mixture. The amine acts as a catalyst to accelerate the curing time of the phenolic urethane resin. The amine gas remains unreacted and is ducted from each core machine to a common sulfuric Acid Scrubber (CU07) and vented to the atmosphere through stack ST08. The primary purpose of scrubbing out the amine gas is for odor control. In the core machines, an oil-based release agent is applied to the core stamping patterns to allow easy separation of the cores from their pattern. This material would likely be exhausted via CU07/ST08.

The hardened cores are then coated by dipping into a water based, pyrophyllite slurry, which provides additional abrasive protection which is applied in one of four coating units (EU43, EU79-EU81). The coated cores are then sent through an associate natural gas fired dryer (EU44-EU47), each with a heat input capacity of 4.0 MMBtu/hr (one of four, see Figure 2-4). Emissions from the core silica sand silos, sand classifier, sand bin, weigh hopper, core removal area and the dryers are vented to the Core/Mold Baghouse (CU08) and vented to the atmosphere through stack ST09.

2.5 Mold Assembly

The top and bottom halves of the molds, cope and drag respectively, along with the core inserts are assembled in the mold-making area (EU33-EU34).

The mold assembly process starts with an outer metal frame onto which a release agent is applied before the frame is filled and compacted with green sand. The outer shape of the desired casting is then stamped into both the cope and drag of the green sand (Mold Making #1 and Mold Making #2). Cores are placed into the bottom half of the molds before the top halve of the mold is placed on the bottom half to form one complete sealed mold. The mold is then conveyed to the pouring furnaces. Emissions generated from the mold assembly area are ducted to the Core/Mold Baghouse (CU08) which exhausts to the atmosphere through stack ST09.

2.6 Pouring, Cooling and Shakeout

The pouring, cooling, and shakeout (PCS) process is presented in the process flow diagram in Figure 2-5. The three PCS operations occur along one continuous conveyor line. At the pouring stations (EU50-EU51) molten iron from the pouring furnace is transferred into the assembled molds that are brought to the furnace on a rail system.

The molds are designed to allow the molten iron to be poured into one fill port. Due to the extreme heat contacting the carbon in the mold and the resin in the core, CO and volatile organic compounds (VOCs) are generated. Vents throughout the mold allow hot gases produced during

the pouring process to escape which typically auto ignite. To enhance the autoignition process, natural gas mold vent pilot burners are strategically placed at the mold conveyor to ignite the vent gases that have not already ignited.

The casted molds are then conveyed through a cooling tunnel (EU52) to allow controlled cooling of the molten iron to form the required metal crystalline structure. Emissions from the pouring stations and cooling tunnel are routed to the Core/Mold Baghouse (CU08) and exhausts to the atmosphere through stack ST09.

Once the iron castings solidify, the mold frames are opened, and the sand mold enters the shakeout conveyor (EU53) where the molds are broken, and the castings separated from the mold and core sand. Emissions from the shakeout conveyor are vented to the Sand Plant Baghouse (CU06) which is vented to the atmosphere through stack ST07.

The sand falls onto a conveyor that returns the sand to the Sand Plant. Before returning to the Sand Plant, the used mold and core sand runs through a sand screening sieve and a sand cooler where air and water are applied to obtain the desired cooling effect and moisture content. The recycled sand is then transferred to storage where it is blended again with other raw materials to make new green sand. This equipment is all part of the Mold Sand Handling and Preparation emission unit (EU22).

Due to impurities in the sand generated from heating the resin-based core sand and carbon in the green sand, some of the recycled sand must be taken out of the sand system and disposed of. Sand destined for a landfill is temporarily stored in the Sand Plant Waste Sand Silo (EU57). Emissions from the sand screen sieve, sand cooler, used sand storage is ducted to the Sand Plant Baghouse (CU06) and vented through stack ST07. Dust generated from the Waste Sand Silo (EU57) is filtered by a silo bin vent (CU10) before exhausting to the atmosphere through stack ST11.

The shakeout conveyor also breaks away the sprues from the casting which are separated and sent back to the melt shop as internal scrap. The castings are conveyed to the Forced Air Cooler (EU59) before entering the finishing stage. The air used to cool the castings is a mixture of recycled air leaving the cooling tunnel and fresh makeup air. Exhaust from the Forced Air Cooler (EU59) is routed to the Core/Mold Baghouse CU08.

2.7 Finishing

The finishing process is presented in Figure 2-6. After the castings are cooled in the forced air cooler, the parts are sorted at the Sorting Conveyor (EU60) to remove any remaining sprues and sent through one of two abrasive steel shot blasting units (EU61-EU62) to remove any remaining sand and to smooth the casting surface. Parts then enter one of two grinding stations (EU64-EU65) which removes any remaining sprue or raised surface from the casting. Also, one of two snag grinders (EU77-EU78) may be used for removing metal from the castings. The Sorting Conveyor, shot blasting units and grinders are ducted to the Fettling Baghouse CU11 which vents to the atmosphere through stack ST12. Dust from the Fettling Baghouse is conveyed to the Fettling Baghouse Waste Dust Silo (EU63) whose emissions are controlled by the Fettling Baghouse Waste Dust Silo Bin Vent Filter (CU12) via stack ST13.

Snag Grinder #1 and #2 each of their own fabric filters (CU21, CU22) that vent inside the building. Any emissions from these stacks would be captured by the Fettling Baghouse (CU11) and vented through stack ST12.

Finished castings are sent to short term storage to allow the gray iron to fully crystallize before being sent to the final machining operation.

In the machine shop, a series of computerized Machining Lines (EU66) and a Perforation Line (EU67) machine each casting to the correct specifications and tolerances. Particulate emissions generated from the dry lathes, drilling, and milling machines are ducted to a series of fabric filters (CU13a-CU13j) that vent into the building. Emissions from these fabric filters are presumed to vent to atmosphere through stack ST16 which exhausts from the Paint Line #1 Booth Filter. Iron chips generated from the dry lathe, milling and drilling operations are collected as scrap steel and sent back to the melt shop and reused as internal scrap.

A low-VOC content rust preventative may be applied to the casting prior to storage (EU82).

2.8 Painting

The painting operations are shown in Figure 2-6. Before shipping, each brake rotor is coated with a zinc coating. Two types of zinc coating operations are used. In one coating process, castings enter one of two lines, Paint Line #3 or Paint Line #2 (EU68-EU69), each consisting of an induction heating unit followed by a paint booth, then a cooling unit.

In an alternative type of coating, castings enter Paint Line #1 (EU71) which applies a solids-based coating, followed by a preheater and final induction heater to cure the zinc coating.

All three paint lines are fitted with individual filters (CU14-CU15 and CU17, respectively) and ducted to stacks ST15A, ST15B and ST16, respectively.

2.9 Utilities

Utility operations are presented in Figure 2-7. The refractory lining of the ladles and furnaces are subjected to extreme wear and stress throughout the casting process and has to be routinely replaced. Refractory relining of the induction furnaces, holding furnaces and pouring furnaces must be conducted in place. The new refractory lining is installed into a furnace by inserting a mold into the furnace and filling the space between the mold and the furnace wall with a refractory slurry. To cure the refractory lining, the mold inserts are removed once the refractory has set, and a portable natural gas burner (EU18) is lowered into the furnace and the heat cures the new refractory lining.

Relining transport ladles is accomplished in the refractory repair area in a same manner using a mold insert and portable natural gas burners (EU05-EU06). The estimated heat input capacity of each refractory curing burners is 8.5 MMBtu/hr.

Three diesel fired emergency generators (EU72-EU74) provide backup emergency electrical in the event of a main electrical supply power failure.

A 1,000 gallon above ground diesel storage tank (EU75) located on site used to refuel company vehicles. Other liquid chemicals are received and stored in totes and drums.

Section 3
Emission Calculations

3.1 Emission Calculations

This section describes how potential emissions from the proposed project are calculated. Detailed calculations of the emissions are provided in Appendix C and a summary table of the resulting hourly and annual emissions are shown in Table 3-1 and Table 3-2.

The emission unit-level calculations provided in Appendix C include footnotes that identify sources of emission factors as well as provide examples of the emission calculation methodology. Appendix D and S provides safety data sheets and other sources of emissions information, respectively.

To determine particulate matter emissions the calculation methodology generally includes using maximum stack outlet grain loading and anticipated maximum air volumes.

Gaseous criteria pollutant emission and organic HAP emission rates are determined via emission factors determined during site specific performance testing, testing conducted by material vendors or from other sources.

3.2 Particulate Emission Calculations

The majority of the emissions sources are sources of filterable particulate. These emissions are either sand or dust particles generated in the casting operation or metal dust generated in the melt shop or finishing areas. In either case the emissions are generally controlled by filters/baghouses.

Exhaust air from any of the fabric filters will not exceed 0.003 grains per dry standard cubic foot (gr/dscf) (vendor guarantee). This exit grain loading is justified in the Best Available Control Technology (BACT) section of the application (Section 5) and is used to calculate the particulate emissions from these sources when multiplied by the maximum design flowrate of air leaving the baghouse operating 8,760 hours per year (maximum potential).

Condensable particulates may be present in exhaust streams from the melting furnaces, pouring, mold cooling and shakeout (PCS) operations (due to the incomplete combustion of or organic materials in the mold and/or core) in addition to natural gas-fired burners. Condensable particulates were considered when establishing the above outlet grain loadings.

There are several locations throughout the process that particulate emissions are emitted such as the induction furnaces, pouring stations, grinding stations and conveyor systems. Where these emissions are controlled by a baghouse, ductwork and hooding are designed to customary engineering standards to ensure emissions from a unit are collected into a primary or secondary hood capture system and do not escape into the workplace atmosphere.

3.3 Gaseous Criteria Pollutants and Organic HAP Emission Calculations

The primary emissions of HAP's, VOC and CO come from the PCS operation due to incomplete combustion of gases generated during pouring of the hot iron into the mold and oxidizing the carbon in the green sand mold and the organic binder present in the core.

To estimate emissions from the PCS process and from the core shop, we relied primarily on the published work from the Casting Emission Reduction Program (CERP). CERP is a consortium of both industry and government (EPA) groups formed to develop accurate emission factors for this industry as well as investigate means of reducing these emissions. It was formed in the 1990s and has published work through 2007.

Although FWNA installed equipment, which on an hourly basis can process 25.3 tons/hr of metal in the melt shop and mold line, this rate of production is not sustainable due to the high maintenance required for this type of equipment. Therefore, FWNA has accepted a federally enforceable production cap of 91,586 tons/yr of metal production which exceeds their sales projections through the year 2025. Therefore, using this production level and the CERP emission factors, it was determined that the facility is a minor source of HAPs

The paint contains both HAPs and VOC. Calculation of emissions of these pollutants was based on the usage of paint per part and a maximum of approximately 3,500,000 parts per year. The safety data sheets (SDSs) identified the contents of these paints which was used to make these emission estimates. SDS for major raw materials are included in Appendix D.

Section 4
Regulatory Analysis

4.1 Prevention of Significant Deterioration (PSD)

The FWNA iron foundry and machining operations are located in Simpson County, Kentucky which is an attainment area for all criteria pollutants. The air quality in neighboring counties is also in attainment with National Ambient Air Quality Standards (NAAQS).

The FWNA foundry is presumed one of the 28 PSD source categories and one hundred tpy of emissions of any PSD regulated pollutant (PM_{10}, NO_x, CO, SO2, or VOC) designates the facility as a major source under PSD.

As identified in Table 1-9, the foundry has the potential to emit over one hundred tpy of CO and VOC therefore the facility is designated as a major source and the foundry construction was subject to PSD review.

Once the facility is designated as a major source other pollutants are evaluated to determine if emissions exceed their respective significant emission rates (SER). As shown in Table 1-9 SERs are exceeded for PM, PM_{10}, and $PM_{2.5}$. As a result, PM, PM_{10}, $PM_{2.5}$, CO and VOC are subject to PSD review.

This section reviews other potential applicable regulations.

4.2 National Emission Standards for Hazardous Air Pollutants (NESHAPs)

4.2.1 NESHAPS for a minor source of HAP (40 CFR 63 Subpart ZZZZZ-NESHAP for Iron and Steel Foundries Area Sources):

The rule provides emission limitations and work practices for both small foundries and large foundries. The FWNA foundry is a large foundry as defined by the rule. In summary this NESHAP requires the iron foundry to:

1) Develop a scrap management program that ensures no mercury switches are present in the scrap;
2) The scrap cannot contain chlorinated plastic material, and must be free of liquids, engine blocks, or oil filters;
3) Methanol cannot to be used in the green mold process;
4) Particulate matter cannot exceed 0.1 pound per ton of metal processed from the furnace operation;
5) Opacity cannot exceed 20% from the furnace baghouse; and
6) All process baghouses for affected units must be monitored with a baghouse leak detector.

4.2.2 NESHAPS for a major and minor sources of HAP (40 CFR 63 Subpart ZZZZ-NESHAP for Stationary Reciprocating Internal Combustion Engines RICE)):

This subpart regulates HAP emissions from RICE located at major sources and area sources of HAP. FWNA installed three emergency generators and therefore is subject to this subpart. The rule requires compliance with NSPS IIII and limits non-emergency operation to less than one hundred hours per year.

4.2.3 Subpart CCCCCC—National Emission Standards for Hazardous Air Pollutants for Source Category: Gasoline Dispensing Facilities

This rule regulates gasoline storage tanks at area sources by imposing certain emission limits and management practices. FWNA no longer plans to install a gasoline tank and therefore this rule is not applicable.

4.2.4 Subpart XXXXXX—National Emission Standards for Hazardous Air Pollutants Area Source Standards for Nine Metal Fabrication and Finishing Source Categories

This rule regulates various metal product industries requiring certain operational practices that would reduce metal HAP emissions. The rule is not applicable to the FWNA foundry because its operation does not fit any category described in Table 1 of the rule.

4.2.5 Subpart HHHHHH—National Emission Standards for Hazardous Air Pollutants: Paint Stripping and Miscellaneous Surface Coating Operations at Area Sources

This rule applies to area sources where surface coating of metal occurs, which does apply to the FWNA foundry. However, the rule focuses on regulating emissions of certain HAP metals namely, Chromium, Lead, Manganese, Nickel or Cadmium. The coating used at the FWNA finishing operations will be a zinc coating and does not contain any of these metals, at least not to the degree that makes it applicable to the rule (<0.1% for each metal). FWNA will continue to document that all coatings used has metal content less than this concentration.

4.3 New Source Performance Standards (NSPS)

4.3.1 40 CFR 60 Subpart Z—Standards of Performance for FerroalloyProduction Facilities

40 CFR 60 Subpart Z, Section §60.260 - Applicability and designation of affected facility:
(a) The provisions of this subpart are applicable to the following affected facilities: Electric submerged arc furnaces which produce silicon metal, ferrosilicon, calcium silicon, silicomanganese zirconium, ferrochrome silicon, silvery iron, high-carbon ferrochrome, charge chrome, standard ferromanganese, silicomanganese, ferromanganese silicon, or calcium carbide; and dust-handling equipment.

Since the FWNA foundry utilizes electric induction furnaces to melt scrap steel and keep the iron molten and not arc furnaces this rule does not apply.

4.3.2 40 CFR 60 Subpart IIII - Standards of Performance for StationaryCompression Ignition Internal Combustion Engine

This rule was finalized on July 11, 2006. It provides performance standards for diesel stationary compression ignition (CI) engines, including emergency engines that commence reconstruction or modification after the proposal date of July 11, 2005, or construction of a new engine after April 1, 2006. The rule provides performance standards for both engine manufacturers and operators. Engine operators must meet the specified emission standards and fuel type specifications in the rule. FWNA has installed three emergency generators and therefore FWNA is subject to this subpart. Other than required for maintenance purposes, these generators only operates when there is a power outage at the facility. The engines to be purchased for the project are in compliance with 40 CFR 60.4202 which specifies required emission standards for emergency engines. The engines will continue to be limited to run a total of one hundred hours per year of non-emergency operation.

4.4 State Specific Rules

The FWNA facility is located in Simpson County, which is in the Commonwealth of Kentucky, South Central Kentucky Intrastate Air Quality Control Region.

Several state specific rules that are potentially applicable to this facility.

4.4.1 401 KAR 51:010 Attainment Status Designations

The FWNA facility is located in Simpson County which has air quality standards for all regulated pollutants that are “Better than standard” and the county is not subject to additional non-attainment compliance requirements.

4.4.2 401 KAR 51:017. Prevention of Significant Deterioration of Air Quality.

The facility’s PTE emissions are such that the facility is subject to this regulation. The facility will continue to comply with this regulation.

4.4.3 401 KAR 52:020. Title V Permits.

The facility’s PTE emissions are such that the facility is subject to this regulation. The facility will continue to comply with this regulation.

4.4.4 401 KAR 52:050. Permit Application Forms.

The facility will complete Kentucky "Forms DEP7007AI to DD, Permit Application to Construct or Operate an Air Contaminant Source" as found in this permit application.

4.4.5 401 KAR 55:005. Significant Harm Criteria.

The purpose of this chapter is designed to prevent ambient pollutant concentrations at any location from reaching the following levels which could cause significant harm to the health of persons. The FWNA facility will continue to comply with this requirement.

4.4.6 401 KAR 55:020. Abatement Strategies.

The FWNA facility will prepare, when requested by the director in writing, standby plans for reducing the emission of air pollutants during episode periods (air pollution alert, warning, and emergency). Standby plans shall be designed to reduce or eliminate emission of air pollutants in accordance with the objectives set forth in Sections 2 to 4 of this administrative regulation.

4.4.7 CFR Part 61 National Emission Standards for Hazardous Air Pollutants.

The FWNA facility does not emit pollutants regulated under 40 CFR 61.01 through 61.139 and 61.160 through 61.358, Subparts A through L and N through FF and is therefore not subject to this regulation.

4.4.8 401 KAR 59:005. General Provisions.

The provisions of this chapter apply to the owner or operator of any new source for which a standard of performance has been promulgated. The FWNA facility will continue to comply with the requirements of this chapter, including Performance Tests, Notification and Recordkeeping, and Monitoring Requirements.

4.4.9 401 KAR 59:010. New Process Operations.

The provisions of this administrative regulation apply to each affected facility or source, associated with a process operation, which is not subject to another emission standard with respect to particulates in this chapter. The FWNA facility will continue to comply with the following Standard for Particulate Matter.

(1) Opacity standard: No person shall cause, suffer, allow, or permit any continuous emission into the open air from a control device or stack associated with any affected facility which is equal to or greater than twenty (20) percent opacity.

(2) Mass emission standard: For emissions from a control device or stack no person shall cause, suffer, allow or permit the emission into the open air of particulate matter from any affected facility which is in excess of the quantity specified in Appendix A to this administrative regulation.

Interpolation of the data for process weight rates up to 60,000 lb/hr shall be accomplished by use of the equation:

$$E = 3.59P^{0.62}$$

and interpolation and extrapolation of the data for process weight rates in excess of 60,000 lb/hr shall be accomplished by the use of the equation:

$$E = 17.31P^{0.16}$$

Where: E = rate of emission in lb/hr and P = process weight rate in tons/hr.

The FWNA facility will continue to comply with the requirements of this regulation.

4.4.10 401 KAR 59:050. New Storage Vessels for Petroleum Liquids.

This rule requires specific performance standards for operation of petroleum storage tanks. It applies only if the total storage is greater than 40,000 gallons. Since the FWNA facility will store less than that, this rule does not apply.

4.4.11 401 KAR 59:105. New Process Gas Streams.

The provisions of this administrative regulation shall apply to each affected facility which means any process gas stream which is not elsewhere subject to a standard of performance within this chapter with respect to hydrogen sulfide, sulfur dioxide, or carbon monoxide.

The FWNA facility does not generate a waste gas stream containing hydrogen sulfide or sulfur dioxide. As regards to CO, the rule only applies if the facility emits more than 1,000 tpy of CO and is in a non-attainment area. Neither of these conditions are true and therefore FWNA is not subject to this regulation.

4.4.12 401 KAR 59:225. New Miscellaneous Metal Parts and Products Surface Coating Operations.

The FWNA facility is an "Affected facility" as it has a coating line located at an original equipment manufacturing industry which applies coatings to metal substrates not elsewhere subject to administrative regulation, and the facility is located in a county designated attainment for ozone in 401 KAR 51:010.

Standard for VOCs: No person shall cause, allow, or permit an affected facility to discharge into the atmosphere more than fifteen (15) percent by weight of the VOCs net input into the affected facility.

The FWNA facility is exempted from this regulation based on the following:

> (b) Less than 0.42 kg/l of coating (three and five-tenths (3.5) lb/gal). The VOC content of FWNA coatings is: 3.4 lb/gal or less.

4.4.13 401 KAR 60:005. 40 CFR Part 60 standards of performance for new stationary sources.

The FWNA facility is subject to the NSPS rules discussed in Section 4.3.

4.4.14 401 KAR 63:002. 40 CFR Part 63 national emission standards for hazardous air pollutants.

The FWNA facility is subject to the NESHAPs discussed in section 4.2.

4.4.15 401 KAR 63:005. Open burning.

This administrative regulation establishes requirements for the control of open burning. The FWNA facility will continue to comply with the requirements of this regulations.

4.4.16 401 KAR 63:010. Fugitive Emissions.

Under this Standards for Fugitive Emissions. (1) No person shall cause, suffer, or allow any material to be handled, processed, transported, or stored; a building or its appurtenances to be constructed, altered, repaired, or demolished, or a road to be used without taking reasonable precaution to prevent particulate matter from becoming airborne; (2) No person shall cause or permit the discharge of visible fugitive dust emissions beyond the lot line of the property on which the emissions originate; (3) When dust, fumes, gases, mist, odorous matter, vapors, or any combination thereof escape from a building or equipment in such a manner and amount as to cause a nuisance or to violate any administrative regulation, the secretary may order that the building or equipment in which processing, handling and storage are done be tightly closed and ventilated in such a way that all air and gases and air or gas-borne material leaving the building or equipment are treated by removal or destruction of air contaminants before discharge to the open air.

In addition, (3) at all times when in motion, open bodied trucks, operating outside company property, transporting materials likely to become airborne shall be covered, and; (4) No one shall allow earth or other material being transported by truck or earth moving equipment to be deposited onto a paved street or roadway.

The FWNA facility will continue to comply with the requirements of this regulation and in addition will continue to ensure that all internal roadways used for truck traffic are paved and these roadways cleaned on a regular basis.

4.4.17 401 KAR 63:020. Potentially Hazardous Matter or Toxic Substances.

FWNA is subject to the provisions of this administrative regulation because it emits or may emit potentially hazardous matter or toxic substances, provided such emissions are not elsewhere subject to the provisions of the administrative regulations of the Division for Air Quality.

FWNA will continue to control potentially hazardous matter and toxic substances. It will not allow the facility to emit potentially hazardous matter or toxic substances in such quantities or duration as to be harmful to the health and welfare of humans, animals, and plants. The FWNA facility will continue to comply with the requirements of this regulation as shown in Section 6 of this document.

4.4.18 401 KAR 68:010. Chemical Accident Prevention - General provisions.

The FWNA facility does not store or use chemicals in quantities which make them subject to Federal regulation 40 CFR Part 68 - General provisions for chemical accident prevention and risk management. Therefore, this regulation does not apply to the facility.

Section 5
BACT Analysis

5.1 Changes from Prior Application

As discussed in Section 1, this document provides an application to correct Air Quality Permit V-16-022 R1 (Air Permit) issued on November 25, 2017, to Fritz Winter North America LP (FWNA). The necessary corrections to the Air Permit were identified as a result of required performance testing, Air Permit required monitoring and recordkeeping and a detailed review of the Air Permit.

The revised permit application has been prepared to address a number of issues including necessary changes to raw material usages and emission limitations. **When compared to the previous application, the requested change in total emissions by this application is approximately the following:**

- PM emissions decrease 9 tpy
- PM_{10} emissions decrease 13 tpy
- $PM_{2.5}$ emissions increase 3.5 tpy
- SO_2 emissions decrease less than 1 tpy
- NO_x emissions decrease 10 tpy
- VOC emissions increase of 33 tpy
- CO emissions increase of 15 tpy
- Lead emissions decrease of less than 0.5 tpy.

Viewing the pollutants collectively, the above emission changes result in an overall increase in criteria pollutants of approximately 27 tpy from the previous application. With the limited emissions change, there is limited changes to the previous BACT determinations as identified in Tables 1-10 and 1-11.

As shown in Table 1-10, BACT emission rates changes for PM and PM_{10} resulted in a decrease in approximately 5 tpy, while $PM_{2.5}$ emissions increased by 10 tpy. These emission changes are substantially the result of the inclusion of expected condensable particulate matter necessitating the following changes:

- CU06/ST07 $PM_{2.5}$ emission increase from 0.0015 to 0.0025 gr/dscf;
- CU08/ST09 $PM_{2.5}$ emission increase from 0.0015 to 0.002 gr/dscf; and
- CU11/ST12 $PM_{2.5}$ emission decrease from 0.0015 to 0.001 gr/dscf.

Similar to Table 1-10, Table 1-11 identifies VOC emission increases over current levels of approximately 43 tpy. The increase associated with VOC emissions are the result of the following changes:

- For Electric Induction Furnaces (EU07 through EU10), the addition of process VOCs emissions and/or secondary capture (in addition to combustion emissions identified in the original application) resulting in an increase from 0.61 to approximately 5 tpy.
- For Pouring (EU50/EU51) and Mold Cooling (EU52), an emission factor change increased emissions from 17.3 to approximately 23 tpy.

- For Shakeout (EU53), as will be discussed below, correcting the emission factor results in an increase from 4.58 to approximately 24 tpy.
- For PUCB Coremaking #1 through #4 (EU39-EU42) correcting emission factor and increasing material usage increased emissions from 1.6 to approximately 33 tpy.
- For Core Wash Station #1 through #4 (EU43, EU79, EU80, EU81), the annual usage increase from 233.2 to 540 tpy resulted in an increase in emissions from 1.7 to approximately 4 tpy.

Table 1-11 shows overall CO potential emissions increase of 22.61 tpy. This CO emissions increase is predominantly resulting from additional process emissions or secondary capture (in addition to combustion emissions identified in the original application) at the Electric Induction Furnaces (EU07 through EU10). This increases the CO emissions 9.3 to approximately 23 tpy at CU01/ST02.

Given the limited emissions increase identified above and absence of new technology and/or work practices for the pollutants of concern, there are no significant changes to the BACT analysis previously submitted as discussed in the following sections.

5.2 BACT Introduction

Sources undergoing a PSD review must apply BACT to any new or modified emission unit that emits a PSD-triggered pollutant. Federal PSD regulations define BACT as:

… an emission limitation (including a visible emission standard) based on the maximum degree of reduction for each pollutant subject to regulation under the Clean Air Act, which would be emitted from any proposed major stationary source or major modification, which the administrator on a case-by-case basis, taking into account energy, environmental, and economic impacts and other costs, determines is achievable for such source or modification through application of production processes or available methods, systems, and techniques, including fuel cleaning or treatment or innovative fuel combustion techniques for control of each such pollutant.

The determination proceeds to state that no BACT determination may be less stringent than the applicable NSPS, NESHAP, or State Implementation Plan (SIP) limits. Also, the definition allows a design or work practice to be established as BACT.

On December 1, 1987, the US EPA Assistant Administrator for Air and Radiation issued a memorandum that implemented certain program initiatives designed to improve the effectiveness of the New Source Review (NSR) programs in the confines of existing regulations and SIPs. Among these was the "top-down" method for determining BACT. The top-down process provides that available control technologies be ranked in descending order of control effectiveness. The first step of this process is to evaluate the most stringent or "top" alternative. This represents BACT, unless it can be demonstrated, and the permitting authority agrees, that technical considerations, energy, environmental, or economic impacts justify a conclusion that the most stringent technology is not "achievable" in a particular case. If the most stringent technology is eliminated in this fashion, then the next most stringent alternative is considered, and so on, until the most appropriate control strategy is selected for each source.

BACT is required for any emission unit that emits a PSD-regulated pollutant above the respective significant emission rate (SER). Table 5-1 identifies PSD-regulated pollutants exceeding the SER as particulate matter (PM), particulate matter equal to or less than 10 microns in diameter (PM_{10}), particulate matter equal to or less than 2.5 microns in diameter ($PM_{2.5}$), volatile organic compounds

(VOCs) and carbon monoxide (CO). These are the same pollutants identified in the prior air permit applications.

5.3 Study Methodology

The requirement to conduct a BACT analysis is provided for in 401 KAR 51:107 Section 8 (2) and states a "new major stationary source shall apply BACT for each regulated NSR pollutant for which the source has the potential to emit in significant amounts."

401 KAR 51_001 Section 1(25) defines BACT as "an emissions limitation, including a visible emission standard, based on the maximum degree of reduction for each regulated NSR pollutant that will be emitted from a proposed major stationary source or major modification and:

(a) Is determined by the cabinet pursuant to 401 KAR 51:017, Section 8, after considering energy, environmental, and economic impacts and other costs, to be achievable by the source or modification through application of production processes or available methods, systems, and techniques, including fuel cleaning or treatment or innovative fuel combustion techniques for control of that pollutant;
(b) Does not result in emissions of a pollutant that would exceed the emissions allowed by an applicable standard codified in 40 C.F.R. Parts 60 and 61; and
(c) Is satisfied by a design, equipment, work practice, or operational standard or combination of standards approved by the cabinet, if:
    1. The cabinet determines pursuant to 40 C.F.R. 51.166(b)(12) that technological or economic limitations on the application of measurement methodology to a particular emissions unit would make the imposition of an emissions standard infeasible;
    2. The standard establishes the emissions reduction achievable by implementation of the design, equipment, work practice, or operation; and
    3. The standard provides for compliance by means that achieve equivalent results.

From the definition above, BACT is "an emission limitation," not an emission reduction rate or a specific technology. BACT is determined on a case-by-case basis and therefore does not require the installation of any specific control device. While BACT is prefaced upon the application of technologies reflecting the maximum reduction rate achievable, the result of BACT is as stated above "an emission limit."

In addition, the above BACT definition identifies that in cases where the implementation of an emission limitation is deemed infeasible, "…a design, equipment, work practice, or operation" may be prescribed as a BACT standard."

BACT is to be established at the lowest value that is achievable. However, there is an important distinction between emission rates achieved at a specific time on a specific unit, and an emission limitation that a unit must be able to meet continuously over its operating life. DC Circuit Court of Appeals, in National Lime Association v. EPA, 627 F.2d 416, 431 n.46 (D.C. Cir. 1980), stated that where a statute requires that a standard be "achievable," it must be achievable "under most adverse circumstances which can reasonably be expected to recur."[1]

[1] Sierra Club v. USEPA (97-1686)

Similar conclusions have been made by USEPA in previous PSD permits. USEPA has stated "Agency guidance and our prior decisions recognize a distinction between, on the one hand, measured 'emissions rates,' which are necessarily data obtained from a particular facility at a specific time, and on the other hand, the 'emissions limitation' determined to be BACT and set forth in the permit, which the facility is required to continuously meet throughout the facility's life. Stated simply, if there is uncontrollable fluctuation or variability in the measured emission rate, then the lowest measured emission rate will necessarily be more stringent than the "emissions limitation" that is "achievable" for that pollution control method over the life of the facility. Accordingly, because the "emissions limitation" is applicable for the facility's life, it is wholly appropriate for the permit issuer to consider, as part of the BACT analysis, the extent to which the available data demonstrate whether the emissions rate at issue has been achieved by other facilities over a long term."[2]

It follows from above that BACT should be established at the lowest feasible emission rate recognizing that the emission unit must comply with the emission rate or limit on a continuous basis for the life of the unit or air permit. It follows then that any actual performance data gathered for an emission unit must be viewed carefully, as rarely will the data be adequate to truly assess the performance that a unit will achieve during its entire operating life. While statistical variability of actual performance can be used to infer what is "achievable," such testing requires a significant effort compiled over a significant period and that robust of a dataset is usually and largely unavailable at the time of the BACT analysis.

The BACT review is conducted using USEPA's prescribed "Top Down" method as outlined in the 13 October 1989 guidance document, "Transmittal of Background Statement on Top Down Best Available Control Technology (BACT)", issued by John Calcagni, Director, the United States Environmental Protections Agency's (USEPA's) Air Quality Management Division. The details of the study were compiled in accordance with the guidance, "Improving New Source Review Implementation," 1 December 1987, from J. Craig Potter, USEPA's Assistant Administrator for Air and Radiation, and the accompanying document "Best Available Control Technology Guidance Document, EPA Region 9, April 1987."

The following sections of the analysis present the "top-down" BACT analysis for each pollutant that exceeded the SER and is specific to each emission unit, unless otherwise specified. The five steps in such an evaluation can be summarized as follows:

Step 1. Identify all possible control technologies;
Step 2. Eliminate technically infeasible control options;
Step 3. Rank the technically feasible control technologies based upon emission reduction potential;
Step 4. Evaluate ranked control technologies based on energy, environmental, and/or economic considerations; and
Step 5. Select BACT.

The above process is typically conducted on a unit-by-unit, pollutant-by-pollutant basis. While the top-down BACT analysis is a procedural approach suggested by USEPA policy, this approach is not specifically mandated as a statutory requirement of the BACT determination. The BACT analysis has been evaluated via this "top-down" approach. The "top-down" will be further discussed below.

[2] U.S. EPA Environmental Appeals Board decision, Newmont Nevada Energy Investment L.L.C. PSD Appeal No. 05-04, decided December 21, 2005. Environmental Administrative Decisions, Volume 12, Page 442.

Economic considerations identified in Step 4 above were completed in accordance with Office of Air Quality Planning and Standard's Control Cost Manual. Supporting documentation for capital and installation costs utilized in the analyses is included in the appendices of this document.

5.4 Emission Units and Pollutants

As discussed above, BACT is required for any emission unit that emits a PSD-regulated pollutant above the respective significant emission rate (SER) with Table 5-1 identifying those regulated pollutants exceeding the SER as PM, PM_{10}, $PM_{2.5}$, VOCs, and CO.

Table 5-2 identifies each unit-that emits a PSD regulated pollutant. Because the emission rates for most PM, PM_{10} and $PM_{2.5}$-generating emission units are quantified at the stack level (see bottom of Table 5-2), Tables 2-2 and Table 2-3 provides a cross reference of Air Pollution Control Device (APCD) ID/Stack ID to Emission Unit ID and Emission Unit Name, respectively, allowing identification of all emission units subject to BACT due to their particulate emissions.

A summary of Emission Unit ID, Emission Unit Description and identification of pollutant emitted by each operation is provided in Table 5-3.

5.5 Analysis Introduction and Prioritization

The first step in conducting the analyses was to identify current emission reduction technologies and determine which operations would most likely be cost-effective to control. Therefore, a review of the RBLC was completed to identify similar operations, already in existence, using add-on controls for PM, PM_{10}, $PM_{2.5}$, VOC, and CO emissions.

The above review found several determinations for PM, PM_{10}, and $PM_{2.5}$ emission sources. Most of the determinations included the installation of a baghouse. As previously mentioned, no pouring, mold cooling, and shakeout operations were found in the RBLC using a CO and/or VOC emissions control device (excluding mold vent light-off). In addition, based on a review of the RBLC and several state permits, no PUCB core- making or mold-making operations were identified as utilizing VOC controls other than an acid scrubber for amine catalyst emissions control.

The review of the RBLC found only VOC emission control devices installed on melting (Electric Arc Furnaces (EAFs) and Cupolas). EAFs and cupolas are more significant sources of VOCs, when compared to an Electric Induction Furnace as installed and used at FWNA.

A major concern when evaluating the feasibility of emissions controls on pouring, mold cooling, and shakeout was the fact that to date no CO and/or VOC control devices were found installed on any of these operations. Given this fact and considering the potential generation of partially oxidized organic compounds and the potential formation of condensation, any control technologies must be carefully evaluated.
Also, from discussions with air pollution control device (APCD) vendors, in the event of a baghouse failure, a secondary filter system would be necessary to capture PM emissions prior to any "regenerative" VOC/CO control device. The most practical and economical of these systems would be a vessel with multiple filters, though some vendors recommended against using regenerative thermal oxidizer systems because of this potential problem. Vendors indicated that a recuperative system would

more likely survive an occasional high PM loading but did indicate that such an event would not be desirable and would shorten the lifespan of the control equipment.

While the process requires a BACT determination for every emission unit, this analysis focused on those production scenarios that would have the largest emissions rates since it is less likely that operations with smaller emissions would be cost-effective to control. The operations and their respective estimated annual PM/PM_{10}/$PM_{2.5}$, VOC, and CO emissions are summarized in Table 5-2.

5.6 BACT Process and Foundry Specific Considerations

During preparation and subsequent evaluation of the BACT analysis, a number of considerations and concerns were identified including those discussed below:

5.6.1 RBLC Information Quality

Any critical BACT determining information identified in the RBLC must be verified before use. For example, Indiana Department of Environmental Management was contacted to clarify relatively low VOC emissions limits listed in the RBLC for the PUCB core-making operations identified at two facilities in Indiana. **From these discussions, it was learned the VOC emissions limits are only intended to address binder system catalyst emissions.** VOC emissions from the resin and other potential organic materials used in the process were not addressed in the permit. FWNA has installed similar controls for the VOC emissions from the PUCB catalyst with control efficiency similar to the Indiana permit requirement.

Regarding PM, PM_{10} and $PM_{2.5}$ RBLC determinations, care must be exercised to investigate whether those emission rates include condensable portion and whether a test method that would measure condensable matter (e.g., USEPA Method 202) was specified in the permit.

Finally, it is important to determine whether compliance has been demonstrated with any particular emission limitation. **This concern actually manifested itself in the previous FWNA air permit application where a Waupaca RBLC VOC determination for a shakeout was used. While FWNA was found to not be in compliance with that emission rate, it has been determined that the Waupaca facility cannot meet that emission rate as well.**

5.6.2 RBLC Identified Pollutants and Emission Rates

It is apparent from review of the RBLC, that CO and VOC emissions from pouring, mold cooling, and shakeout operations have been inconsistently identified in air permit applications including several facilities in the RBLC that did not identify any CO or VOC emissions from these operations. This reduces the number of RBLC determinations available for review.

It is important to recognize that a number of the VOC emission limitations identified for the above operations are the emission factor identified in WebFIRE as opposed to the resultant emission rate from a detailed BACT evaluation.

5.6.3 CO and VOC Emission Quantification and Variability

Another important project issue was determining representative VOC and CO emission factors for this analysis. VOC emission factors published in USEPA's AP-42 and WebFIRE for iron foundries are of "poor" or "unknown" quality. In the case of CO, no emission factors exist in AP-

42 or WebFIRE for pouring, mold cooling, and shakeout operations. While FWNA has conducted testing, the dataset is limited.

Following along with the above, it is important to consider material and process variability when comparing CO emission from iron pouring and mold cooling operations. CO emissions may vary due to metal type, pouring temperature, raw materials, throughput rate, and other product or production parameters.

Therefore, it is very difficult to compare CO emissions from individual pouring and mold cooling operations on a pound per hour basis without an understanding of the underlying process. While not perfect, it is prudent to compare operations pouring the same metal (e.g., iron) with similar raw materials (such as mold binder type) in terms of pounds of emission per ton of iron poured. This would at least consider metal type (which gives a good indication of pouring temperature) and production rate.

5.6.4 Commingling of Process Emissions

For successful operation of a fabric filter, emissions from a single foundry operation are usually vented to multiple air pollution control devices. This ensures each fabric filter encounters particles whose size is more widely distributed and that any moist or particles with adhesive properties are not all vented to a single fabric filter The activities of commingling process emissions promote the development of a superior cake and assists with the release of the cake from the filtering media.

Therefore, when reviewing a single foundry RBLC determinations, it must be recognized that the entry is usually not from a single operation but for a commingled exhaust from multiple operations. This commingling not only impact RBLC determinations for particulates but any gaseous pollutant being evaluated.

5.6.5 Air Volume and Capture Rates

Because of the nature of foundry operations, emission unit ventilation requirements due to equipment configuration and access typically require high exhaust airflow rates with a portion of the emission remaining fugitive. The RBLC does not provide an assessment of the capture system or capture rate, which could alter the results of any BACT and the corresponding compliance demonstration.

5.7 Control Technology Feasibility

This section discusses in more detail the “top-down” BACT analysis that will be conducted for each pollutant that exceeded the SER. The five steps in such an evaluation can be summarized as follows:

- **Step 1.** Identify all possible control technologies;
- **Step 2.** Eliminate technically infeasible control options;
- **Step 3.** Rank the technically feasible control technologies based upon emission reduction potential;
- **Step 4.** Evaluate ranked control technologies based on energy, environmental, and/or economic considerations; and
- **Step 5.** Select BACT.

5.7.1 Step 1 – Identify All Control Technologies

The primary objective of Step 1 is to identify all "available" control options for the emission unit in question. Available control options are defined in the 1990 Draft NSR Workshop Manual as:

> … those air pollution control technologies or techniques with a practical potential for application to the emissions unit and the regulated pollutant under evaluation. Air pollution control technologies and techniques include the application of production process or available methods, systems, and techniques, including fuel cleaning or treatment or innovative fuel combustion techniques for control of the affected pollutant. This includes technologies employed outside of the United States. As discussed later, in some circumstances inherently lower-polluting processes are appropriate for consideration as available control alternatives. The control alternatives should include not only existing controls for the source category in question, but also (through technology transfer) controls applied to similar source categories and gas streams, and innovative control technologies. Technologies required under lowest achievable emission rate (LAER) determinations are available for BACT purposes and must also be included as control alternatives and usually represent the top alternative.

A lower-polluting process or practice is considered applicable if it has been demonstrated for a similar emission unit or application. An add-on control is considered applicable if it can properly function given the physical characteristics of the pollutant stream being controlled (i.e., gas stream temperature, pollutant concentration, etc.).

Potentially applicable control options were surveyed. These included control technologies that have been used in other source categories and countries. Control technologies identified by LAER determinations were also included as available control technologies.

Based on the guidelines provided in the USEPA Draft New Source Review Workshop Manual document, a comprehensive list of available control technologies was developed for this permit application.

5.7.2 Step 2 – Eliminate Technically Infeasible Options

The purpose of Step 2 is to evaluate the technical feasibility of the control technology options identified in Step 1. Control technologies that have been installed and operated successfully on the type of emission unit under review are considered demonstrated and technically feasible. Control technologies that are not applicable or not available are determined to be technically infeasible. For a technology that has not been demonstrated for a particular type of emission unit, the Draft New Source Review Workshop Manual provides the following guidance:

> Two key concepts are important in determining whether an undemonstrated technology is feasible: "availability" and "applicability." As explained in more detail below, a technology is considered "available" if it can be obtained by the applicant through commercial channels or is otherwise available within the common sense meaning of the term. An available technology is "applicable" if it can reasonably be installed and operated on the source type under consideration. A technology that is available and applicable is technically feasible.

A control technique is considered available, within the context presented above, if it has reached the licensing and commercial sales stage of development. A source would not be required to experience extended time delays or resource penalties to allow research to be conducted on a new technique. Neither is it expected that an applicant would be required to experience extended trials to learn how to apply a technology on a new and dissimilar source type.

Consequently, technologies in the pilot scale testing stages of development would not be considered available for BACT review. An exception would be if the technology were proposed and permitted under the qualifications of an innovative control device consistent with the provisions of 40 CFR 52.21(v) or, where appropriate, the applicable SIP.

Commercial availability by itself, however, is not necessarily sufficient basis for concluding a technology to be applicable and therefore technically feasible. Technical feasibility, as determined in Step 2, also means a control option may reasonably be deployed on or "applicable" to the source type under consideration.

Technical judgment on the part of the applicant and the review authority is to be exercised in determining whether a control alternative is applicable to the source type under consideration. In general, a commercially available control option will be presumed applicable if it has been or is soon to be deployed (e.g., is specified in a permit) on the same or a similar source type. Absent a showing of this type, technical feasibility would be based on examination of the physical and chemical characteristics of the pollutant-bearing gas stream and comparison to the gas stream characteristics of the source types to which the technology had been applied previously.

Deployment of the control technology on an existing source with similar gas stream characteristics is generally sufficient basis for concluding technical feasibility barring a demonstration to the contrary.

5.7.3 Step 3 – Rank Remaining Technically Feasible Control Options

The third step in the five step top-down BACT evaluation process involves ranking of the technically feasible control options determined in Step 2 from most effective to least effective in terms of emissions reduction potential. Step 3 also determines the energy, economic, and environmental impacts associated with the technically feasible control options, which are more fully evaluated in Step 4 of the process.

Ranking control options involves the selection of appropriate units of emissions for comparison between types of control technologies and emission units.

Achievable emission limits were determined for each of the control technology options based on engineering estimates, published literature, and testing data from existing sources. After establishing performance levels for the technically feasible control technologies, control technology alternatives were ranked by their demonstrated emissions reduction performance. Also, as indicated in the Draft New Source Review Workshop Manual regarding selection of the defined "top" control technology alternative:

> … an applicant proposing the top control alternative need not provide cost and other detailed information in regard to other control options. In such cases the applicant should document that the control option chosen is, indeed, the top, and review for collateral environmental impacts.

5.7.4 Step 4 – Evaluate Remaining Control Technologies

Step 4 of the five step top-down BACT evaluation process involves evaluating the suitability of the ranked control technology options under Step 3, based on energy, economic, and environmental impacts of use of the control technology. The following excerpt, taken from the Draft New Source Review Workshop Manual, explains the general evaluation process of Step 4:

> "If the applicant accepts the top alternative in the listing as BACT, the applicant proceeds to consider whether impacts of unregulated air pollutants or impacts in other media would justify selection of an alternative control option. If there are no outstanding issues regarding collateral environmental impacts, the analysis is ended, and the results proposed as BACT. In the event that the top candidate is shown to be inappropriate, due to energy, environmental, or economic impacts, the rationale for this finding should be documented for the public record. Then the next most stringent alternative in the listing becomes the new control candidate and is similarly evaluated. This process continues until the technology under consideration cannot be eliminated by any source-specific environmental, energy, or economic impacts which demonstrate that alternative to be inappropriate as BACT."

The energy impacts analysis determines whether the use of the control technology results in any significant or unusual energy penalties or benefits. The economic impacts analysis evaluates average and incremental cost effectiveness to determine if use of the control technology would result in a negative economic impact. The evaluation of environmental impacts considers the site-specific environmental impacts of use of the control technology option, involving issues such as waste generation, water use and discharge, visibility impacts, emissions of additional pollutants, etc.

5.7.5 Step 5 – Selection of BACT

The highest ranked and most effective control option not eliminated in Step 4 for energy, economic, or environmental impacts is selected and proposed as BACT for that pollutant and emission unit.

These procedures were followed to develop a BACT assessment for each major piece of equipment in the process for each of the three PSD triggering pollutants. This analysis is presented in the following sections by pollutant.
Table 5-6, 5-12 and 5-21 provide a summary of the conclusion and basis for each BACT determination.

5.8 Particulate BACT

Almost all of the emission sources in the iron foundry process emit particulate matter in one form or another. The main source of the particulate is the sand used to form the

mold. Particulate is also generated from the finishing and machining of the finished parts and the final coating application.

In the case of the machining, particulate is formed from the fine metal dust during grinding and milling operations. This particulate is generally in filterable form, but a significant amount of condensable particulate can be generated from the pouring, cooling and shakeout operation and is a result of incomplete combustion of the organic compounds emitted from the mold in this step. To much less of a degree condensable particulate is also generated from the combustion of natural gas in the melt shop and the utilities area.

Particulate matter BACT will be reviewed for those emission units where emissions will be increasing with this permit application. From review of Table 1-10, those are emission units ducted to CU01, CU06 (PM2.5 only), and CU08 ($PM_{2.5}$ only) and identified in Tables 2-2 and Table 2-3 and bolded in Table 5-4. Those emission units include:

- Charge Handling (EU01)
- Induction Furnaces #1-#4 (EU07-EU10)
- Hot Metal Transfer (EU13)
- Mold Sand Handling and Preparation (EU22)
- Mold Making #1 (EU33)
- Mold Making #2 (EU34)
- Core Silica Sand Silo A/B (EU35A/EU35B)
- Core Sand Handling and Preparation (EU36)
- Pouring #1/#2 (EU50/EU51)
- Mold Cooling (EU52)
- Shakeout Conveyor (EU53)

Units of combustion are highlighted in Table 5-4 and will be addressed separately in this section.

As stated previously, information from the previous application will be retained as possible and especially for those emission units where emission increases are not requested.

5.8.1 Step 1 – Identify All Control Technologies

Available control technologies with the practical potential for application to the emission unit are identified in Step 1. The application of demonstrated control technologies in other similar source categories to the emission unit of concern can also be considered. While identified technologies may be eliminated in subsequent steps in the analysis based on technical and economic infeasibility or environmental, energy, economic or other impacts, control technologies with potential application to the emission unit under review are identified in this step.

Under Step 1 of the BACT analysis, the following resources are typically consulted when identifying potential control technologies or work practices:

- Applicable NESHAP, NSPS and State Rules
- U.S. EPA's RBLC database;

- Determinations of BACT by regulatory agencies for other similar sources or air permits and permit files from federal or state agencies;
- Federal and/or state regulatory requirements;
- Engineering experience with similar control applications;
- Information provided by air pollution control equipment vendors with significant market share in the industry; and
- Review of literature from industrial technical or trade organizations.

NESHAP Review

As stated in Section 4, FWNA is subject to the Foundry Area Source Rule and is defined by the rule as a "new" source and a "large" foundry. As such, FWNA is subject to the following PM requirements:

- Per 40 CFR §63.10895(c)(2) the facility must not discharge to the atmosphere emissions from any metal melting furnace or group of all metal melting furnaces that exceed 0.1 pounds of PM per ton of metal charged or 0.008 pounds of total metal HAP per ton of metal charged.
- Per 40 CFR §63.10895(e), the facility must not discharge to the atmosphere fugitive emissions from foundry operations that exhibit opacity greater than 20 percent (6-minute average), except for one 6-minute average per hour that does not exceed 30 percent.

RBLC Review

A review of the RBLC was conducted in September 2021. The review assessed permits from the time period of January 2006 through August 2021. Research of the historical and transient databases was not conducted because the control determinations in those databases would precede the implementation of the major and area source National Emission Standards for Hazardous Air Pollutants (NESHAPs) for iron foundries and generally would not be as stringent on emission limits or control technology requirements.

Table 5-5 includes PM/PM_{10}/$PM_{2.5}$ determinations contained in the RBLC. The RBLC identified fabric filters/baghouses as the method of control for filterable particulate matter emissions. No control technology was identified for condensable particulate matter.

RBLC process numbers correspond to the following:

Cupola Furnace	81.410
Induction Furnace	81.420
Desulfurization	81.430
Sand, Core and Mold Making Process	81.440
Casting and Pouring Processes	81.450
Shakeout Processes	81.460
Other Iron Foundry Processes	81.490

For particulate matter from the coating operations, in addition to process number 81.490, the RBLC was reviewed for process number 41.013. This yielded the Fritz Winter North America Facility as the only facility to coat iron castings.

While the RBLC only identified fabric filters/baghouses for the emission units of concern, potential control technologies for filterable particulate matter include the following:

- Cyclones
- Wet scrubber
- Electrostatic precipitators (ESPs)
- Cartridge collectors
- Fabric Filters (Baghouses)

These technologies are discussed below.

Cyclones

A cyclone is a simple mechanical device that uses centrifugal and inertial forces on particulate laden exhaust within cylindrical container. Large particles hit the wall of the cyclone and fall to the bottom where they can be collected. Unless all the particles are of a large diameter (>10 microns) the cyclone is not considered the most efficient collection devices. Cyclones are typically used as a pre-cleaning control used to reduce the particulate concentration in a gas stream prior to entering a second more effective control device.

Wet scrubber

Wet scrubbers used for particulate are generally Venturi scrubbers. In Venturi scrubber particles are removed through inertial impaction when they impact upon water droplets traveling at a high velocity through the throat of the scrubber. Wet scrubbers are useful in removing particulates that are sticky and/or hygroscopic, combustive, corrosive and explosive, hard to remove in dry form, in presence of soluble gases, and have a high moisture content. Venturi scrubbers and spray tower wet scrubbers are types of wet scrubbers generally employed in combustion of solid fuels.

Electrostatic Precipitators (ESPs)

Electrostatic precipitators utilize electrical forces to transfer particulate onto a collector plate. By passing flue gases laden with particulate through a gaseous ion region, known as a corona, particles are given a charge. The charged particles are forced onto the collector plate by an electrical field generated by electrodes kept at high voltage. In dry ESPs, the collected particles are knocked off into a hopper by a sonic horn or mechanically, in a manner that does not introduce them back into the gas stream. Wet ESPs remove PM buildup with intermittent or continuous washing with water.

Cartridge Collectors

Cartridge collector filters utilize paper or nonwoven fibrous media set in an inner and outer wire frame structure. The filter is often pleated to increase surface area. The exhaust is passed through the filter and as particulate is collected on its surface, efficiency increases.

Fabric Filters (Baghouses)

A fabric filter is one of the most efficient means of separating particles from a gas stream. The advantage of fabric filters is that the efficiency is largely insensitive to the physical characteristics of the gas stream and changes in the dust loading. Fabric filters are the industry standard for iron foundry particulate controls.

One type of fabric filter is the baghouse with both positive and negative pressure baghouses being used in the industry. Positive pressure baghouses operate at an internal pressure greater than atmospheric. In this configuration, the exhaust fans are located before the baghouse (i.e., on the "dirty side") and pull the air from the process, then push the air through the baghouse. These systems may vent to ambient air through a continuous ridge vent instead of a stack.

Negative pressure baghouses operate at an internal pressure less than atmospheric. In this configuration, the exhaust fans are located after the baghouse (i.e., on the "clean side"), pull the air from the process through the baghouse, and exhaust to the ambient air through a central stack.

5.8.2 Step 2: – Eliminate Technically Infeasible Options

Below presents a discussion regarding the elimination of certain identified control technologies.

Cyclones

As mentioned earlier, cyclones are typically used as a pre-cleaning control and thus would have to be placed prior to the baghouse. As a pre-cleaner, cyclones are designed to remove more than 80% of particles greater than twenty microns in diameter. The majority of the particulate in the various foundry exhaust streams will be smaller than twenty microns and thus will not be an effective pre-control. Cyclones are a technically infeasible option and will not be analyzed further.

Wet Scrubbers

Wet scrubbers are technically feasible but have many disadvantages compared to fabric filters, which can achieve better levels of particulate control. Scrubber systems have very high pressure drops that result in unacceptable system operating costs. They also required water treatment and sludge disposal, which are not necessary with the other particulate control options.

Wet scrubbers were more commonly used in iron foundries to control exhaust from a cupola furnace. In that application a wet scrubber makes sense because in a cupola fuel is being burned in the furnace where the metal is melted. Typically, the fuel used is coal and since considerable amount of sulfur dioxide is released from such furnaces, the scrubber can remove that as well as particulate. Since FWNA will use an induction furnace that has negligible gaseous emissions and since sand and dust recovery is an essential part of the FWNA process, wet scrubbers are considered not technically feasible to the FWNA process and will not be further analyzed.

ESPs

ESPs are not technically feasible for the FWNA operation. A key parameter is the composition of the particles to be collected. Iron compounds adhere very strongly to the collection plate of the ESP (due to their electromagnetic properties). They are, therefore, very difficult to remove and thus reduce ESP efficiency. Zinc and other metal compounds tend to foul ESP electrodes, also reducing effectiveness. In addition, ESPs have a relatively high capital cost and are greatly affected by sensitivity to the variations in flow rate, solids loading, and temperature fluctuations inherent in batch operations like that seen in an iron foundry. For these reasons ESPs are considered technically infeasible and not considered further.

Cartridge Collectors

Cartridge collectors function optimally with a low loading of dry, non-sticky dust flowing at a low rate of 10,000 cubic feet per minute (cfm) or less and in low humidity. However, for the FWNA process typical air flow rates are in the range of approximately 100,000 dry standard cubic feet per minute (dsfcm). In addition, some of the sand and dust that would be collected on the cartridge may have residual resin material from the core bonding materials that would tend to obstruct the cartridge making it unusable. Due to these limitations, cartridge collectors are only viewed as technically feasible for the machining operations.

Fabric Filters (Baghouses)
Fabric filters and generally baghouses are the industry standard for iron foundries particulate controls and is considered further in the next step.

5.8.3 Step 3: – Ranking Remaining Control Technologies by Control Effectiveness

Now that the control technology has been selected the emission limit needs to be assessed based on this technology.

Using the current state of the art bags and overall design, most vendors will guarantee an outlet grain loading of 0.005 grains per dscf (gr/dscf) for filterable particulate emissions. EPA in developing the emission standards for new "area sources" of HAPs as discussed above established emission levels from melting operations of 0.1 lb/ton of metal. This level of control can only be met with certain baghouse designs.

5.8.4 Step 4: Evaluate Most Effective Controls and Document Results

Table 5-5 provides the PM, PM_{10} and $PM_{2.5}$ RBLC entries for all foundry operations from January 2006 through August 2021 and are sorted by process number.

Prior to 2016, typically the permitted level for all of the operations has been 0.005 gr/dscf. One foundry, Rochester Metal Products, Inc. was permitted at a lower level of 0.003 gr/dscf. We contacted the state agency (IDEM) and they confirmed Rochester Metal Products, Inc. was achieving those levels but for filterable PM only.

ASAMA foundry in Wheland, Georgia has a baghouse with an identified outlet loading of 0.001 gr/dscf. This baghouse only controls emissions from minor sources such as silo bin vents. At this same foundry the permit levels for the main source of emissions is 0.005 gr/dscf and for one application, the shot blasting area is 0.008 gr/dscf.

Following 2016, there are newer installations with outlet loading limitations in the range of 0.001 to 0.003 gr/dscf, depending on expected contribution of condensable particulates. Baghouses with higher inlet loading from melting, pouring, cooling and shakeout have RBLC determinations on the higher side of this range. Operations with no expected condensable fraction (e.g., grinding, shotblasting) have RBLC determinations on the lower side of the range.

5.8.5 Step 5: Select BACT

BACT cannot be less stringent than the applicable NSPS, NESHAP or SIP limit. Since the FWNA foundry will be a minor source of HAPs the applicable NESHAP standard is Subpart ZZZZZ. This

subpart limits the filterable particulate emissions from the melt shop baghouse to 0.1 lb/ton of metal.

Table 5-6 provides the BACT limit and justification for each emission unit.

5.9 CO BACT

In addition to the CO emission from the combustion of fuels (natural gas throughout a number of operations and diesel fuel used at the emergency generators), the main sources of CO from the FWNA are the melting, pouring, cooling and shakeout (PCS) operations.

At the PCS operations CO is generated during partial oxidation of the gases that leave the mold during the pouring operation. These gases contain various organic compounds created from the breakdown of binders in the core and the carbon in the green sand mold. This CO is first emitted at the pouring operation but continues during cooling and shakeout.

The majority of the CO emissions are released via the Core/Mold Baghouse stack (CU08/ST09) as a result of pouring and cooling. CO emissions area also generated during melting and released via the Melt Baghouse stack (CU01/ST02) and during shakeout with those being emitted via the Sand Plant Baghouse (CU06/ST07) stack.

As discussed in Section 1 and identified in Table 1-11, this revision to the previous permit application does not seek to change the previous CO BACT determination for pouring, cooling and/or shakeout, but will address the requested increase in emissions of CO from the electric induction furnaces being emitted from the Melt Baghouse (CU01) stack, ST02. This application seeks to establish a CO emission rate of CO 22.1 tpy from the furnaces that are emitted via ST02 (9.25 tpy is already established in the permit for the fuel combustion sources, therefore the total requested CO emission rate is 31.85 tpy from CU01/ST02).

This BACT analysis leaves the original text that examines potential add-on controls to reduce the CO that is generated from pouring, cooling and shakeout but adds an analysis to determine BACT from the electric induction furnaces.

5.9.1 Step 1 – Identify All Control Technologies

Available control technologies with the practical potential for application to the emission unit are identified in Step 1. The application of demonstrated control technologies in other similar source categories to the emission unit of concern can also be considered. While identified technologies may be eliminated in subsequent steps in the analysis based on technical and economic infeasibility or environmental, energy, economic or other impacts, control technologies with potential application to the emission unit under review are identified in this step.

Under Step 1 of the BACT analysis, the following resources are typically consulted when identifying potential control technologies or work practices:

- Applicable NESHAP, NSPS and State Rules
- U.S. EPA's RBLC database;

- Determinations of BACT by regulatory agencies for other similar sources or air permits and permit files from federal or state agencies;
- Federal and/or state regulatory requirements;
- Engineering experience with similar control applications;
- Information provided by air pollution control equipment vendors with significant market share in the industry; and
- Review of literature from industrial technical or trade organizations.

NESHAP Review

As stated in Section 4, FWNA is subject to the Foundry Area Source Rule and is defined by the rule as a "new" source and a "large" foundry. As such, FWNA is subject to the following PM requirements:

- Per 40 CFR §63.10895(c)(2) the facility must not discharge to the atmosphere emissions from any metal melting furnace or group of all metal melting furnaces that exceed 0.1 pounds of PM per ton of metal charged or 0.008 pounds of total metal HAP per ton of metal charged.
- Per 40 CFR §63.10895(e), the facility must not discharge to the atmosphere fugitive emissions from foundry operations that exhibit opacity greater than 20 percent (6-minute average), except for one 6-minute average per hour that does not exceed 30 percent.

RBLC Review

A review of the RBLC was conducted in September 2021. The review assessed permits from the time period of January 2006 through August 2021. Research of the historical and transient databases was not conducted because the control determinations in those databases would precede the implementation of the major and area source National Emission Standards for Hazardous Air Pollutants (NESHAPs) for iron foundries and generally would not be as stringent on emission limits or control technology requirements.

Table 5-8 includes CO determinations contained in the RBLC. The RBLC identified "mold vent off gas ignition" as the method of control for carbon monoxide emissions.

The data in Table 5-8 is sorted by process number. RBLC process numbers correspond to the following:

Cupola Furnace	81.410
Induction Furnace	81.420
Desulfurization	81.430
Sand, Core and Mold Making Process	81.440
Casting and Pouring Processes	81.450
Shakeout Processes	81.460
Other Iron Foundry Processes	81.490

Potential control technologies include the following:

1. Incineration
2. Flare
3. Mold vent gas autoignition

Incineration

Incineration equipment increases the temperature of exhaust gas stream to the combustion temperature of CO. There are three types of incineration systems: recuperative, regenerative, and catalytic. In a recuperative thermal oxidizer, the exhaust enters a combustion chamber and into a heat exchanger. The heat exchanger utilizes conduction to transfer heat to the waste gas. The exhaust gas can be used to preheat incoming waste gas and/or combustion air to offer fuel savings. A regenerative thermal oxidizer (RTO) uses a direct contact heat exchanger to raise the exhaust temperature.

The heat exchanger is made up of a structured, high heat capacity media like a bed of porous ceramic packing. A regenerative catalytic oxidizer (RCO) is very similar to an RTO but uses a precious metal-based catalyst bed and the oxygen in the gas stream to reduce CO emissions to carbon dioxide (CO2). The catalyst speeds up the conversion of CO at a lower temperature than a thermal incinerator.

Flare

Flares utilizes the fuel value of the exhaust streams themselves and if present in high enough concentrations (CO or VOC), the gas can be burned at the flare tip with some type of ignition source typically at a well elevated level. The gas is burned without heat recovery and directly vented into the atmosphere.

Mold Vent Off Gas Autoignition

When the molten iron is poured onto the sand molds, organic HAP and CO are emitted when the chemicals in the mold and core vaporize or undergo pyrolysis. Emission of HAPs and CO continue to be emitted during cooling and shakeout process. These gases are concentrated into one or two vents built into the mold for the sole purpose of venting the gases generated when molten metal is poured into it. Ignition of the mold off gas vents for the most part occurs almost immediately after pouring begins due to the heat by the molten metal.

5.9.2 Step 2: Eliminate Technically Infeasible Options

Below presents a discussion regarding the elimination of certain identified control technologies.

Incineration

In the FWNA process, an add-on incinerator could only follow a baghouse due to high particulate content in the exhaust streams. Regenerative and catalytic systems can be rendered inoperable if the particulate residuals in the exhaust stream foul the catalyst bed or ceramic media packing of the RTO. Even so placing an RCO downstream of a baghouse still may not protect the unit. Catalyst vendors state that certain compounds might poison a catalyst by reacting with the active sites on the catalyst to render it inactive. Typical elements that need to be considered are sulfur, phosphorus, silicon and heavy metals. The latter two pollutants will be present in the exhaust. Vendors warn that even small concentrations of these elements can render a catalyst ineffective. The gas stream must be carefully characterized to make sure that poisons do not exist.

In particular vendors caution that particulate matter can mask or even poison a catalyst to render it ineffective. However, the size and physical state of the particles must be carefully

considered; particles in the gas stream do not necessarily mean that RCO cannot be used. For example, coarse particles will be caught in the media bed and will not reach the catalyst layer on top. Likewise, condensable particles will re-volatilize by the time they reach the catalyst. Neither case would prevent catalyst operation.

However, fine particulate might reach and deposit on the catalyst layer. Such fine particulate will be present in these exhaust streams.

Flare

As indicated, flares utilize continuous and highly concentrated CO and VOC streams. This would be technically infeasible for the PCS stream because it exhibits a low concentration of CO (<130 ppm) and a low VOC concentration. Utilizing a flare to control CO emissions is not technically feasible and will not be further analyzed.

Mold Vent Off Gas Autoignition

The MACT rule states that mold vent autoignition is occurring if a flame ignites more than 75% of the time during the pouring operation. It is FWNA's experience that this occurs more than 75% of the time in their process but to enhance the probability of auto ignition, gas burner(s) will be situated along the conveyor downstream of the pouring station that will be oriented to ignite the vents on the mold assemblies in case they are not already burning.

5.9.3 Step 3: Ranking Remaining Control Technologies by Control Effectiveness

Mold vent off gas autoignition and incineration are the only technically feasible methods for CO control of PCS emissions. There is a major concern about operation of an RCO due to the possibility that the particulate and metals in the gas stream, in particular the silica particles will poison the catalyst. Regardless an RCO is further evaluated for its cost effectiveness.

5.9.4 Step 4: Evaluate Most Effective Controls and Document Results

As stated above, this application only requests an increase in CO emissions from the Melt Baghouse (CU01) and associated stack (ST02). The below only deviates from the previous test in the Electric Induction Furnace section and to move the previous tables into an Appendices.

Electric Induction Furnaces

To evaluate the economic feasibility of installing an RCO or RTO downstream of the Melt Baghouse (CU01/ST02), the EPA cost estimating spreadsheets for an RCO and RTO were used to estimate the annualized costs. These cost spreadsheets estimate the equipment and operating costs for an oxidizer based on the exhaust flow rate from the processes and installing the necessary duct work to route the gases from the baghouse to the RCO/RTO.

Table 5-9 provides a summary of the cost effectiveness in controlling the CO emissions in this manner. Between the two different oxidizers the cost to control emissions from the Melt Baghouse (CU01/ST02) is estimated to be in the range of $75,000 to $150,000 per ton of pollutant controlled. As VOC could also be controlled by these technologies the cost effectiveness of controlling both emissions were evaluated and determined to be in the range of $65,000 to $130,000 per ton of pollutant controlled. Support for this evaluation is included in Appendix E.

Pouring, Cooling and Shakeout
To evaluate the economic feasibility of installing an RCO or RTO downstream of the Sand Plant Baghouse (CU06/ST07) and Core/Mold Baghouse (CU08/ST09) that control particulate emissions from pouring, cooling and shakeout, the EPA cost estimating spreadsheets for an RCO and RTO were used to estimate the annualized cost. These cost spreadsheets estimate the equipment and operating costs for an oxidizer based on the exhaust flow rate from the processes and installing the necessary duct work to route the gases from each baghouse to the RCO/RTO.

Table 5-10 and Table 5-11 provides a summary of the cost effectiveness in controlling the CO emissions in this manner.

Between the two different oxidizers the cost to control emissions from the Sand Plant Baghouse (CU06/ST07) is estimated to be in the range of $35,000 to $70,000 per ton of pollutant controlled. As VOC could also be controlled by these technologies the cost effectiveness of controlling both emissions were evaluated and determined to be in the range of $22,000 to $46,000 per ton of pollutant controlled. Support for this evaluation is included in Appendix F.

Between the two different oxidizers the cost to control emissions from the Core/Mold Baghouse (CU08/ST09) is estimated to be in the range of $8,000 to $17,000 per ton of pollutant controlled. As VOC could also be controlled by these technologies the cost effectiveness of controlling both emissions were evaluated and determined to be in the range of $7,000 to $15,000 per ton of pollutant controlled. Support for this evaluation is included in Appendix G.

5.9.5 Step 5: Select BACT

Table 5-8 lists the CO emission limits and controls that are currently in place for PCS operations in similar iron foundries which were taken from US EPA RACT/BACT/LAER Clearinghouse (RBLC) database as well as from a search of facility permits of other iron foundries producing similar products that the FWNA foundry will. Emission limits for CO from these operations tend to be consistent and range from 6 lb/ton to 10 lb/ton of molten metal poured. In most cases the shakeout emissions are separated out from the pouring and cooling emissions in order to properly recover the sand. That is why the listing may show 1 lb/ton for shake out and 5 lb/ton for pouring and cooling, but the sum total of the PCS emissions is 6 lb/ton.

Table 5-10 provides the BACT limit and justification for each emission unit.

5.10 VOC BACT

As discussed in Section 1 and identified in Table 1-11, this permit application includes an increase in VOC emissions of thirty-eight tpy over the previous permit application. As shown in Table 1-11 this increase is mainly attributed to the VOCs generated from the mixing of the two-part phenolic urethane resin with the sand prior to core-making as well as use of the core release agent. These emissions would be generated from the Acid Scrubber and associated stack (CU08/ST09).

The increase in VOC emission is also attributed to the Sand Plant Baghouse (CU06/ST07) due to an increase in VOC from Shakeout (EU53). The previous BACT determination was based on an entry from Waupaca Foundry of 0.1 lb/ton. Waupaca Foundry has not been able to comply with this emission rate.

As stated in Section 1, because of the production variables, it is technically more prudent to view PCS emissions in total rather than to attempt to identify CO emissions from pouring, cooling and shakeout discretely. The previous application identified VOC emissions of 44.28 tpy compared to this application that has a small increase to 47.89 tpy.

To a lesser extent, an increase in VOC emissions above the previous application is identified for the Melt Baghouse (CU01) stack, ST01. Initially only VOCs from combustion were estimated. Performance testing indicates approximately four tons per year are being emitted from the melting operation.

In addition to the above and VOC emissions from the combustion of natural gas and diesel fuel from three emergency generators (EU72-EU74), VOC emissions occur from the following operations:

- In addition to shakeout, VOC emissions are released from the pouring and cooling due to the same reason that CO emissions exist, that is due to incomplete combustion of gases emitted from the mold during pouring, cooling and shakeout process. These emissions are released via the Sand Plant Baghouse (CU06/ST07) and the Core/Mold Baghouse (CU08/ST09).
- VOC emission also occur at the finishing operation where the final parts are coated with zinc containing paint. This paint contains some VOC which is emitted from Paint Line #1 Booth Filter (CU17/ST16), Paint Line #2 Booth Filter (CU15/ST15B), and Paint Line #3 Booth Filter (CU14/ST15A).
- As stated above, there is also VOCs emitted from the core shop where the phenolic urethane resin is mixed with the sand and unreacted amine gas is exhausted through the sulfuric acid scrubber (CU07/ST08).
- Minor amounts of VOC emissions from the Core Wash Stations #1, #2, #3 and #4 (EU43, EU79-EU81) amount to approximately 0.444 tpy.
- Limited emissions of VOC occur related to the Rust Prohibitive Application (EU82) is the range of approximately 0.003 tpy.

The sources of VOC emissions in this application are identified in Table 5-13.

5.10.1 Foundry Operations

The following section assesses BACT for the typical foundry operations.

5.10.1.1 Step 1 – Identify All Control Technologies – Foundry Operations

Available control technologies with the practical potential for application to the emission unit are identified in Step 1. The application of demonstrated control technologies in other similar source categories to the emission unit of concern can also be considered. While identified technologies may be eliminated in subsequent steps in the analysis based on technical and economic infeasibility or environmental, energy, economic or other impacts, control technologies with potential application to the emission unit under review are identified in this step.

Under Step 1 of the BACT analysis, the following resources are typically consulted when identifying potential control technologies or work practices:

- Applicable NESHAP, NSPS and State Rules

- U.S. EPA's RBLC database;
- Determinations of BACT by regulatory agencies for other similar sources or air permits and permit files from federal or state agencies;
- Federal and/or state regulatory requirements;
- Engineering experience with similar control applications;
- Information provided by air pollution control equipment vendors with significant market share in the industry; and
- Review of literature from industrial technical or trade organizations.

NESHAP Review

As stated in Section 4, FWNA is subject to the Foundry Area Source Rule and is defined by the rule as a "new" source and a "large" foundry. As such, FWNA is subject to the no organic HAP/VOC requirements associated with the Foundry Area Source Rule other than the metallic scrap management program. Per 40 CFR §63.10885(a) the facility must operate by purchasing only metallic scrap that does not include "post-consumer automotive body scrap, postconsumer engine blocks, post-consumer oil filters, oily turnings, lead components, chlorinated plastics, or free liquids."

As an alternative to the above, the facility can operate according to written material specifications for the purchase and use of only iron and steel scrap that has been depleted (to the extent practicable) of organics and HAP metals in the charge materials used by the iron and steel foundry.

RBLC Review

A review of the RBLC was conducted in September 2021. The review assessed permits from the time period of January 2006 through August 2021. Table 5-14 includes VOC determinations contained in the RBLC.

The RBLC database included entries for melting, pouring, cooling, shakeout, coremaking and miscellaneous operations. Findings of the RBLC included the following:

- For electric induction melting operations, no add on controls were found.
- For pouring/mold cooling operations, no add on control devices were identified. Mold vent ignition was the only work practice standard identified.
- For shakeout operations, no add-on control devices were found. As discussed elsewhere in this document, compliance has not been demonstrated for RBLC entries with emission limits of 0.1 lb/ton.
- For PUCB core machines, acid scrubber for the control of catalyst emissions was identified in the RBLC along with an amine control efficiency of 88.9%.

Other VOC control devices are discussed below.

Other Air Pollution Control Alternatives

Control devices reduce VOC emissions by either recovering or destroying VOCs before they are discharged into the ambient air. Incineration, flares, and mold vent off gas ignition are all viable control technologies to reduce VOC emissions; however, they

have been deemed technologically infeasible for the sand plant. The following additional methods can help to reduce VOC:

- Absorption
- Adsorption
- Condensation
- Incineration
- Biodegradation
- Good work practices

Absorption

Process gases are dissolved in a non-volatile liquid usually by contact in a scrubber which ensures a high surface area of contact between the gas and absorbing liquid (water or some other absorptive liquid in which the gases are soluble).

Adsorption

In adsorption, exhaust gases are routed across a matrix of adsorption solid media such as carbon. The carbon beds can be regenerated and the VOC-laden stream from regeneration reused, disposed of as waste, or incinerated.

Condensation

The exhaust gases are routed across a heat exchanger to drop the temperature of the gases to a value where it will condense out the VOC for collection and reuse or disposal.

Incineration

Incineration equipment increases the temperature of exhaust gas stream to the combustion temperature of VOC. There are three types of incineration systems: recuperative, regenerative, or catalytic. In a recuperative thermal oxidizer, the exhaust enters a combustion chamber and into a heat exchanger. The heat exchanger utilizes conduction to transfer heat to the waste gas through conduction. The exhaust gas can be used to preheat incoming waste gas and/or combustion air to offer fuel savings. A regenerative thermal oxidizer uses a direct contact heat exchanger to raise the exhaust temperature. The heat exchanger is made up of a structured, high heat capacity media like a bed of porous ceramic packing. A catalytic oxidizer uses a precious metal-based catalyst bed and the oxygen in the gas stream to reduce combust the VOC emissions to CO2. The catalyst allows the combustion to occur at a lower temperature than it otherwise would have in a thermal incinerator.

Biofiltration

In biofiltration, exhaust gases are passed over a filter composed of biologically active material to destroy VOCs.

Good Work Practices

As identified in the RBLC the auto-ignition of mold vent gases is one work practice to reduce VOC emissions as well as the metallic scrap management requirements identified above.

5.10.1.2 Step 2: Eliminate Technically Infeasible Options

The following evaluates the technical feasibility of control emissions from foundry operations using the technologies identified above.

Absorption

Because of the complexity of the organic exhaust stream this option was determined to be infeasible for pouring, cooling and shakeout. An acid scrubber will be assumed for use as a means of reducing the amine gas catalyst from the phenolic urethane coremaking operation

Adsorption

Adsorption columns were determined to be technically infeasible methods of control as they typically operate at pollutant loading concentrations of 500 to 2000 ppm and flow rates on the magnitude of 5000 cfm. The high flow rates and low concentrations of this scenario would not allow the VOCs to be effectively adsorbed.

Condensers

Refrigerated condensers were also reviewed as a possible control technology for this scenario. There is no record of a system of this type ever being used in a foundry. Condensers require much greater pollutant loading concentrations than will occur at any typical foundry operations. Concentrations as high as 500 ppm will have removal efficiencies of less than 50%. Per these restrictions, a condenser would not be technically feasible.

Incineration

In the FWNA process, an add-on incinerator could only follow a baghouse due to high particulate content in the exhaust streams. Regenerative and catalytic systems can be rendered inoperable if the particulate residuals in the exhaust stream foul the catalyst bed of ceramic media packing of the RTO.

Even so placing an RCO downstream of a baghouse still may not protect the unit. Catalyst vendors state that certain compounds might poison a catalyst by reacting with the active sites on the catalyst to render it inactive. Typical elements that need to be considered are sulfur, phosphorus, silicon and heavy metals. The latter two pollutants will be present in the exhaust. Vendors warn that even small concentrations of these elements can render a catalyst ineffective. The gas stream must be carefully characterized to make sure that poisons do not exist.

In particular vendors caution that particulate matter can mask or even poison a catalyst to render it ineffective. However, the size and physical state of the particles must be carefully considered; particles in the gas stream do not necessarily mean that RCO cannot be used. For example, coarse particles will be caught in the media bed and will not reach the catalyst layer on top. Likewise, condensable particles will re-volatilize by the time they reach the catalyst. Neither case would prevent catalyst operation.

However, fine particulate might reach and deposit on the catalyst layer. Such fine particulate will be present in the exhaust of these two streams.

Recuperative thermal oxidizers were reviewed to determine the technical feasibility of this control technology. The typical air flow rate for this type of control technology is from 500 to 50,000 standard cubic feet per minute (scfm). The air flow rates are well above the maximum of the typical range. The pollutant loading (concentration) for this technology should be approximately 1500 to 3000 ppmv to maintain appropriate temperatures required. This installation is well below these concentrations regardless of the emissions unit described. Due to these considerations described in USEPA's Air Pollution Control Technology Fact Sheet, recuperative thermal oxidizers were considered infeasible.

Flare

As indicated, flares utilize continuous and highly concentrated CO and VOC streams. This would be technically infeasible because of the low concentrations of CO and VOC in each exhaust.

Mold Vent Off Gas Autoignition

The MACT rule states that mold vent autoignition is occurring if a flame ignites more than 75% of the time during the pouring operation. It is FWNA's experience that this occurs more than 75% of the time in their process but to enhance the probability of auto ignition, gas burner(s) will be situated along the conveyor downstream of the pouring station that will be oriented to ignite the vents on the mold assemblies in case they are not already burning. capture rate, which could alter the results of any BACT and the corresponding compliance demonstration.

5.10.1.3 Step 3: Ranking Remaining Control Technologies by Control Effectiveness

For melting, pouring, cooling and shakeout, provided the air volumes and concentrations, incineration would be the only control technology that would likely be feasible.

Regarding coremaking, the cores are produced in an enclosed automated press machine. The machine takes the properly weighed out core sand and mixes it with the appropriate amount of a two-part phenolic urethane resin and hardener. The care making process is referred to as the cold box method which involves passing the sand/binder core through an amine (typically dimethyl propylamine) gas which is a catalyst that quickly hardens the resin. The resins have a very low vapor pressure and the emissions from the core machine are primarily unreacted amine. The industry standard control device for this operation is a sulfuric acid scrubber, specifically designed to reduce the amine gas concentration for odor concerns.

5.10.1.4 Step 4: Evaluate Most Effective Controls and Document Results

This assessment is identical for one made for CO in the sections above with the only difference being the emission levels of VOC are a fraction of what it was for CO. Tables 5-15 through 5-17 proved the cost effectiveness. In all cases, neither the RTO or RCO control technology is cost effective. Due to the high particulate loading in the exhaust

of these streams the other potential control technologies other than incineration are not technically feasible.

Electric Induction Furnaces

To evaluate the economic feasibility of installing an RCO or RTO downstream of the Melt Baghouse (CU01/ST02), the EPA cost estimating spreadsheets for an RCO and RTO were used to estimate the annualized costs. These cost spreadsheets estimate the equipment and operating costs for an oxidizer based on the exhaust flow rate from the processes and installing the necessary duct work to route the gases from the baghouse to the RCO/RTO.

Table 5-15 provides a summary of the cost effectiveness in controlling the VOC emissions in this manner. Between the two different oxidizers the cost to control emissions from the Melt Baghouse (CU01/ST02) is estimated to be in the range of $443,000 to $870,000 per ton of pollutant controlled. As VOC could also be controlled by these technologies the cost effectiveness of controlling both emissions were evaluated and determined to be in the range of $65,000 to $130,000 per ton of pollutant controlled. Support for this evaluation is included in Appendix H.

Pouring, Cooling and Shakeout

To evaluate the economic feasibility of installing an RCO or RTO downstream of the Sand Plant Baghouse (CU06/ST07) and Core/Mold Baghouse (CU08/ST09) that control particulate emissions from pouring, cooling and shakeout, the EPA cost estimating spreadsheets for an RCO and RTO were used to estimate the annualized cost. These cost spreadsheets estimate the equipment and operating costs for an oxidizer based on the exhaust flow rate from the processes and installing the necessary duct work to route the gases from each baghouse to the RCO/RTO.

Table 5-16 and Table 5-17 provides a summary of the cost effectiveness in controlling the CO emissions in this manner.

Between the two different oxidizers the cost to control emissions from the Sand Plant Baghouse (CU06/ST07) is estimated to be in the range of $65,00 to $135,000 per ton of pollutant controlled. As VOC could also be controlled by these technologies the cost effectiveness of controlling both emissions were evaluated and determined to be in the range of $22,000 to $46,000 per ton of pollutant controlled. Support for this evaluation is included in Appendix I.

Between the two different oxidizers the cost to control emissions from the Core/Mold Baghouse (CU08/ST09) is estimated to be in the range of $65,000 to $135,000 per ton of pollutant controlled. As VOC could also be controlled by these technologies the cost effectiveness of controlling both emissions were evaluated and determined to be in the range of $7,000 to $15,000 per ton of pollutant controlled. Support for this evaluation is included in Appendix J.

Coremaking

To evaluate the economic feasibility of installing an RCO, regenerative thermal oxidizer or recuperative thermal oxidizer in place of or downstream of the Acid Scrubber

(CU07/ST08), the EPA cost estimating spreadsheets were used to estimate the annualized costs. These cost spreadsheets estimate the equipment and operating costs for an oxidizer based on the exhaust flow rate from the processes and installing the necessary duct work to route the gases to the oxidizer.

Table 5-18 provides a summary of the cost effectiveness in controlling the VOC emissions in this manner. Between the three different oxidizers the cost to control emissions in place of or downstream of the Acid Scrubber (CU07/ST08) is estimated to be in the range of $10,000 to $26,000 per ton of pollutant controlled. Support for this evaluation is included in Appendix K.

5.10.1.5 Step 5: Selection of BACT

Table 5-14 provides BACT and permit listings for VOC from PCS operations at iron foundries similar to the FWNA foundry. The lowest emission levels in the listing are 0.5 lb/ton for pouring and cooling operations and 0.1 lb/ton for shakeout operations which is what is being proposed as the BACT level for PCS emissions. For all three operations FWNA proposes a work practice for VOC BACT. FWNA proposes a work practice for control of VOC from the PCS process by practicing and ensuring mold vent autoignition.

A work practice for the core shop is to ensure the pH of the sulfuric acid scrubber is maintained below a pH of 4.5 to ensure that amine is absorbed. As well as keep any unused resin containers closed.

5.10.2 Coating Operations

FWNA has determined it will not install a fourth paint line. This results in a reduction in potential VOC and xylene emissions from 26 to 21.7 tpy and 5.4 to 1.9 tpy, respectively. Please refer to Appendix C for the emission calculations and Appendix D for the Safety Data Sheets (SDSs). As a result of the elimination of the fourth paint line with this application FWNA requests Alternative Operating Scenario #1 be identified within the Air Permit as the representative operating scenario.

Following the submission of the original air permit application and subsequent to the initial air permit application revision, FWNA and their contractors addressed a number of concerns regarding the appropriate BACT for the control of VOC emissions from the coating operations. This application incorporates that work.

5.10.2.1 Step 1 – Identify All Control Technologies

The finished product is coated with zinc particles applied in a spray coating operation using zinc containing paints. The potential VOC emissions from the three paint lines (EU68, EU69 and EU71) is 21.7 tpy.

Available control technologies with the practical potential for application to the emission unit are identified in Step 1. The application of demonstrated control technologies in other similar source categories to the emission unit of concern can also be considered. While identified technologies may be eliminated in subsequent steps in

the analysis based on technical and economic infeasibility or environmental, energy, economic or other impacts, control technologies with potential application to the emission unit under review are identified in this step.

Under Step 1 of the BACT analysis, the following resources are typically consulted when identifying potential control technologies or work practices:

- Applicable NESHAP, NSPS and State Rules
- U.S. EPA's RBLC database;
- Determinations of BACT by regulatory agencies for other similar sources or air permits and permit files from federal or state agencies;
- Federal and/or state regulatory requirements;
- Engineering experience with similar control applications;
- Information provided by air pollution control equipment vendors with significant market share in the industry; and
- Review of literature from industrial technical or trade organizations.

NESHAP Review
As stated in Section 4, FWNA is an "area source" of hazardous air pollutants (HAPs) subject to the Foundry Area Source Rule as well as possible application of the Surface Coating Area Source Rule. Neither rule identify any rule applicability to FWNA operations.

RBLC Review
A review of the RBLC was conducted in September 2021. The review assessed permits from the time period of January 2006 through August 2021. The only VOC determination for the coating of iron castings contained in the RBLC was for the operation of FWNA.

Other VOC control devices are discussed below.

Other Air Pollution Control Alternatives
Control devices reduce VOC emissions by either recovering or destroying VOCs before they are discharged into the ambient air. Incineration, flares, and mold vent off gas ignition are all viable control technologies to reduce VOC emissions; however, they have been deemed technologically infeasible for the sand plant. The following additional methods can help to reduce VOC:

- Absorption
- Adsorption
- Condensation
- Incineration
- Biofiltration
- Good work practices

Absorption
Process gases are dissolved in a non-volatile liquid usually by contact in a scrubber which ensures a high surface area of contact between the gas and absorbing liquid (water or some other absorptive liquid in which the gases are soluble).

Adsorption
In adsorption, exhaust gases are routed across a matrix of adsorption solid media such as carbon. The carbon beds can be regenerated and the VOC-laden stream from regeneration reused, disposed of as waste, or incinerated.

Condensation
The exhaust gases are routed across a heat exchanger to drop the temperature of the gases to a value where it will condense out the VOC for collection and reuse or disposal.

Incineration
Incineration equipment increases the temperature of exhaust gas stream to the combustion temperature of VOC. There are three types of incineration systems: recuperative, regenerative, or catalytic. In a recuperative thermal oxidizer, the exhaust enters a combustion chamber and into a heat exchanger. The heat exchanger utilizes conduction to transfer heat to the waste gas through conduction. The exhaust gas can be used to preheat incoming waste gas and/or combustion air to offer fuel savings. A regenerative thermal oxidizer uses a direct contact heat exchanger to raise the exhaust temperature. The heat exchanger is made up of a structured, high heat capacity media like a bed of porous ceramic packing. A catalytic oxidizer uses a precious metal-based catalyst bed and the oxygen in the gas stream to reduce combust the VOC emissions to CO2. The catalyst allows the combustion to occur at a lower temperature than it otherwise would have in a thermal incinerator.

Biofiltration
In biodegradation, exhaust gases are passed over a filter composed of biologically active material to destroy VOCs.

Good Work Practices
Possible work practices for coating operations includes the use of low VOC coatings and retaining VOC-containing coatings in closed containers when not in use.

5.10.2.2 Step 2: Eliminate Technically Infeasible Options
The following evaluates the technical feasibility of control emissions from foundry operations using the technologies identified above.

Absorption
This control method and associated technologies are considered infeasible because the VOC from the coating operation is not water soluble.

Adsorption

Adsorption is technically feasible for painting operations but typically adsorption is chosen as a viable control technique only when particulate in the exhaust stream being treated is minimal such as printing operations where only volatile vapors exist. Carbon adsorption has been used in the past for painting operations in the automotive industry where exhaust air flows are relatively small, and the VOC content is not large enough to warrant direct oxidation.

Following submittal of the original permit application but prior to the initial permit revision, Fritz Winter has contacted numerous vendors of pollution control devices to obtain quotes for installation of a carbon adsorption/ regeneration system. VOC air pollution control device vendors contacted did not offer onsite regeneration units or stated the relatively small amount of VOC emissions did not warrant a carbon regeneration system especially considering the absence of on-site process reuse or recovery.

Vendors encouraged the consideration of more cost-effective control technologies. The vendors stated that onsite regeneration of activated carbon is viable only when the quantities of VOC are much greater and when the recoverable material is intended for reuse in the process. Regardless, adsorption remains a technically feasible control option for the air permit application.

Condensation

Condensation will not be an effective control method because VOC concentrations from the paint booth would be too dilute to be condensed.

Biofiltration

Like adsorption a biofilter will generate a solid waste requiring disposal and likely not be cost effective when compared to incineration/oxidation. It will be retained as a feasible alternative for evaluation.

Incineration

Incineration remains a technically feasible control option for this operation.

Good Work Practices

In order many operations especially where solvents are used or in coating operations the VOC containing materials can be handled properly to minimize evaporation from storage or if possible, obtain substitute low VOC containing materials.

5.10.2.3 Step 3: Ranking Remaining Control Technologies by Control Effectiveness

The remaining control technologies are ranked in the following order with regard to likely control effectiveness:

1. Incineration/Oxidation
2. Carbon Adsorption
3. Biofiltration
4. Good Work Practices

5.10.2.4 Step 4: Evaluate Most Effective Controls and Document Results

A cost effectiveness evaluation was made for the addition of an RTO, biofilter, and activated carbon adsorber in the previous application. Table 5-19 provides the results of that analysis for Phase 1 (as the fourth paint booth will not be installed). Cost effectiveness range from $23,000 to $48,000 per ton of VOC removed. Appendix L provides the text from the previous application along with the supporting documents.

Evaluation of the traditional EPA BACT cost effectiveness calculation spreadsheet for a carbon adsorption system with actual vendor quotes, indicated that the cost of a carbon adsorption system is higher than the EPA spreadsheet used for the original permit application would indicate. Evaluation of the traditional EPA BACT cost effectiveness calculation spreadsheet for an RTO with actual vendor quotes indicated that the cost of an RTO is lower than the EPA spreadsheets appear to indicate. The lowest cost of the two vendor quotes was then inserted into the cost effectiveness calculations and the new cost-effective results that are summarized in Table 5-19 and supported by Appendix L.

While the FWNA permit was the only application identified in the RBLC, during the 2017 air permit application revision, for BACT comparison purposes Fritz Winter reviewed permits from similar facilities that practiced surface coating of iron cast parts and identified three foundries. Their permits are provided in Appendix M and the limits are summarized in Table 5-20. Neither of the three issued air permits require any kind of VOC treatment of emissions.

5.10.2.5 Step 5: Selection of BACT

The proposed BACT for the coating operation is good work practices by keeping unused paint and solvent containers covered at all times.

5.11 BACT for Utility Operations

Natural gas burners will be utilized in several places around the foundry. At the pouring stations they are used to ensure even heat of the refractory spout during the pouring operation, and at the refractory relining area where new ladles are being fabricated or old ladles are repaired with new refractory lining. New refractory linings must be heat treated and that is done using an open flame natural gas burner. Whenever natural gas is burned in the foundry it will be by open flame which ensures good combustion which minimizes both CO and VOC emissions. Since natural gas is used and not some other fossil fuel the amount of particulate being generated is also minimized.

BACT for natural gas burning is a work practice of burning it in an open flame following vendor recommendations to ensure complete combustion. The amount of particulate, CO and VOC generated from this combustion operation is assumed to be equal to or less than emissions listed in Section 1.4 of AP-42 for natural gas burning in boilers.

The FWNA foundry will have three diesel fired emergency generators to produce power for critical operations in the foundry in case of outage. These generators will meet the emission standards listed in NSPS Subpart IIII which has just been recently updated and is being proposed as BACT for that operation.

BACT for all the VOC emitting sources are summarized in Table 5-21.

Section 6
Air Quality Analysis

The following section provides the Air Quality Analysis (Analysis) used to demonstrate that the facility will not cause or contribute to a violation of either the National Ambient Air Quality Standards (NAAQS) or the Prevention of Significant Deterioration (PSD) Class I or Class II Increment. The Analysis also demonstrates that the FWNA facility will comply with 401 KAR 63:020 that regulates "potential hazardous matter or toxics substances (i.e., toxic air pollutants – TAPs)" and addresses the secondary formation of ozone and PM with an aerodynamic diameter of less than 2.5 microns ($PM_{2.5}$).

Part C of Title I of the Clean Air Act, 42 U.S.C. §§7470-7492, is the statutory basis for the PSD program. USEPA and Kentucky Division for Air Quality (KDAQ) have codified PSD definitions, applicability, and requirements in 40 CFR Part 52.21 and 401 KAR 51:017, respectively. PSD is the component of the New Source Review (NSR) permitting program that is applicable in areas that are not designated as in nonattainment of the NAAQS. Simpson County, where the FWNA facility is located, is currently designated as "attainment" or "unclassifiable" for all criteria pollutants and must comply with the air permitting requirements associated with the PSD regulations.

As the initial installation and subsequently issued permit estimated emissions above the PSD major source threshold (one hundred tpy) for carbon monoxide (CO) and volatile organic compounds (VOCs), the FWNA facility is a PSD major source. In addition, the facility has significant emission rates (SERs) of particulate matter (PM), PM with an aerodynamic diameter of less than 10 microns (PM_{10}), and PM with an aerodynamic diameter of less than 2.5 microns ($PM_{2.5}$).

Given the proposed project exceeds the PSD major source threshold for CO/VOC and exceeds the SER for other regulated pollutants with established SILs, NAAQS, and/or PSD Increment standards, an air quality modeling analysis was conducted.

Conducting the Analysis in accordance with the Air Dispersion Modeling Protocol submitted to and approved by Kentucky Division for Air Quality (KDAQ) and USEPA Region 4, the screening analysis indicated that the project would exceed the PSD Significant Impact Levels (SILs) for both PM_{10}, and $PM_{2.5}$, therefore cumulative analysis modeling evaluation was completed for both these pollutants. The results of the cumulative analysis described below demonstrates the project will not cause an exceedance of the National Ambient Air Quality Standards (NAAQS) or exceed PSD increment consumption levels.

6.1 Modeling Methodology

Prior to conducting the Analysis an Air Dispersion Modeling Protocol document was submitted to KDAQ for review and comment. Comments received by KDAQ and USEPA Region 4 precedes the protocol in Appendix N.

The protocol was modified to address the following comments by KDAQ/USEPA:

- The parallel version of AERMOD (AERMOD Breeze) was not utilized so an equivalency demonstration was not necessary.

- The Analysis uses the most recent meteorological data for years 2016-2020 as provided by KDAQ.
- As addressed below and in the appendices, all increment consuming sources provided by KDAQ were evaluated.
- A formal request for pre-construction monitoring waiver was submitted and approved by KDAQ. The request and letter are provided in Appendix O.
- Justification for the use of existing ambient air monitors to provide background concentrations used in the model is provided in the text below.
- An FLM/USFS Request for Determination form was prepared and submitted.
- Air toxics analysis was prepared and completed by modeling the concentrations and comparing those the Region 9, November 2021 Region Screening Level (RSL).
- The NAAQS and PSD Increment modeling inventory was revised to reflect any changes to existing sources or additions to new sources in the area as addressed below and in the appendices.

A brief summary of the protocol is provided in the sections below:

6.1.1 Model Selection

The U.S. EPA American Meteorological Society / Environmental Protection Agency Regulatory Model (AERMOD) model including a state-of-the-science downwash algorithm and utilizes AERMET, a meteorological data preprocessor that utilizes current planetary boundary layer theory to calculate dispersion coefficients. The most current version of the AERMOD model (version 21112) was used in conducting the modeling analysis.

The modeling was performed using the regulatory default option, which includes:

- Stack-tip downwash; and
- A routine for processing averages when calm wind conditions occur or when meteorological data is missing

6.1.2 Meteorological Data

EPA modeling guidance allows the use of five years of off-site meteorological data or at least one year of on-site meteorological data. KDAQ provided meteorological data for the years 2016 through 2020.

6.1.3 Building Downwash

The emission sources considered in this analysis were evaluated in terms of their proximity to nearby structures. The purpose of the evaluation was to determine if stack discharge might become caught in the turbulent wakes of these structures. Wind blowing around a building creates zones of turbulence that are greater than if the building was absent. Plumes entrained in the zones of turbulence experience enhanced plume growth and restricted plume rise. AERMOD incorporates the Plume Rise Model Enhancements (PRIME) algorithms using dimensions from the EPA's Building Profile Input Program (BPIP) for estimating for plumes affected by building wakes. The site layout was be used to digitize buildings and structures to be included in the downwash analysis.

Direction-specific building dimensions and the dominant downwash structure parameters will be determined using the BREEZE® BPIP software. This software incorporates the algorithms of the U.S. EPA-sanctioned Building Profile Input Program with PRIME enhancement (BPIP-PRIME).

6.1.4 Model Terrain

The terrain elevation for each modeled receptor, building, and source will be determined using the USGS National Elevation Dataset (NED).

The terrain height for each modeled receptor will be calculated using the AERMOD terrain processor (AERMAP version 18081). In addition to terrain elevation, an additional parameter called the hill height scale is required for each receptor to execute AERMOD's terrain modeling algorithms. AERMOD computes the impact at a receptor as a weighted interpolation between horizontal and terrain-following states using a critical dividing streamline approach. This scheme assumes that part of the plume mass will have enough energy to ascend and traverse over a terrain feature and the remainder will impinge and traverse around a terrain feature under certain meteorological conditions. The hill height scale will be computed by the AERMAP terrain preprocessor for each receptor as a measure of the one terrain feature in the modeling domain that would have the greatest effect on plume behavior at that receptor.

The hill height scale does not represent the critical dividing streamline height itself but supplies the computational algorithms with an indication of the relative relief within the modeling domain for the determination of the critical dividing streamline height for each hour of meteorological data.

According to Section 2.2.1 of the AERMOD Users Guide, the NED array boundary for AERMAP must include all terrain features that exceed a 10 percent elevation slope from any given receptor to properly calculate the hill height scale at each receptor. The domain for the hill height analysis was set to the minimum coverage required for proper handling of elevation slope (an automated feature within the Breeze AERMOD software).

6.1.5 Urban/Rural Determination

As with the initial construction modeling, the facility remains located in a predominantly rural area. Therefore, rural settings will be selected in AERMOD.

6.1.6 Receptor Grid Coordinate System

The same Cartesian receptor grid spacing [using UTM WGS84 coordinate system] in the i**nitial construction demonstration** will be used for the SMC and SIA model runs including:

- receptors spaced at 100-meter intervals along the fenceline;
- receptors spaced at 100-meter intervals extending approximately 4 km from the center of the facility.
- Receptors spaced at five hundred meter extending from 4 km to 10 km from the center of the facility;
- If necessary, receptors spaced 1,000 meters extruding from 10 km to 50 km from the center of the facility.

The results of the SIA modeling, demonstrating the extents of the Significant Impact Area, determined the size of the Cartesian receptor grid (with 100-meter spacing) surrounding the facility to be used for PSD Increment and NAAQS modeling analyses. Locations of off-site background sources and Class I Area(s) will determine the locations of additional receptors.

6.2 Modeled Emission Sources

The Significance Analysis evaluates the emission increases associated with the specific project and does not take into consideration any regional off-site emissions sources or other facility emission sources.

The NAAQS analysis considers both on-site and off-site sources of the emissions of concern. This section discusses the emission sources considered, emission rates, and modeling methods utilized in the Significance Analysis and NAAQS analysis.

Each emission source at the proposed facility was modeled at its maximum hourly emission rate for all modeled pollutants. The only source of emissions not included in the modeling is that from the emergency generators. EPA recognizes that not all emission sources need to be included in an air quality analysis such as source that may be permitted to operate 500 hr/yr but will likely operate much less than that and in a random fashion such as the FWNA emergency generators.

6.3 Class II Significance Analysis

The Class II Significance Analysis is conducted to determine whether the emissions increases associated with the projects would cause a significant impact upon the area surrounding the facility and is conducted to determine the need for further pollutant modeling. The Significance Analysis included the following pollutants: PM_{10}, $PM_{2.5}$, and CO. Impacts determined to be "significant" are defined by ambient concentration exceeding thresholds referred to as the SILs and shown in Table 6-1.

Modeled emission points, parameters, and emission rates for the Significance Analyses are provided in Table 6-2. Figure 6-1 and 6-2 indicate the location of the buildings, receptors, property line areas.

Figure 6-3 shows the receptor grid for the SIL evaluation at 100-meter spacing from facility center to 4,000 meters in each direction, and 500-meter spacing from 4,000 meters to 10,000 meters in each direction. The results of the Significance Analyses for each pollutant are provided in Table 6-3 and represent the maximum modeled concentrations from the significance runs. All modeled results reported for the Significance Analysis correspond to H1H modeled impacts for the five-year meteorological period evaluated.

Graphical outputs of the SIL concentrations are provided in Figures 6-4 through 6-7. The maximum impact greater than the SIL was determined by the PM2.5 24-hour concentrations and determined to be at a radius of 2,907 m. This radius was used as the significant impact analysis for all NAAQS and PSD increment compliance demonstrations.

The screen modeling results for CO do not exceed the SILs for either the 1-hour or 8-hour averaging periods; therefore, no additional modeling is required for CO. The screen modeling results for PM_{10}, as presented in Table 6-3 exceeds the SIL for the 24-hour averaging periods; therefore, a cumulative analysis modeling is required for PM_{10}. The screen modeling results for $PM_{2.5}$, as presented in Tables 6-3, do exceed the SILs for the 24-hour and annual averaging periods; therefore, cumulative analysis

modeling is required for $PM_{2.5}$. For this modeling the same receptor grid spacing as identified above was used.

6.4 Ambient Monitoring Requirements

The PSD Significance Analysis is also used to determine whether the applicant is exempt from ambient monitoring requirements. To determine whether pre-construction monitoring should be considered, the maximum modeled impacts attributable to the proposed project are assessed against Significant Monitoring Concentrations (SMC). The SMC for the applicable averaging periods for PM_{10}, $PM_{2.5}$, and CO are provided in 40 CFR 52.21(i)(5)(i) and are listed in Table 6-1.

A pre-construction air quality analysis using continuous monitoring data may be required for pollutants subject to PSD review per 40 CFR 52.21(m). If either the predicted modeled impact from an emissions increase or the existing ambient concentration is less than the SMC, an applicant may be exempt from pre-construction ambient monitoring. The SMC value for $PM_{2.5}$ was vacated on January 22, 2013; however, EPA has responded to the vacatur by indicating that existing background monitors should be sufficient to fulfill the ambient monitoring requirements.

As shown in Table 6-4, the CO and PM_{10} SMC was not exceeded, therefore, preconstruction monitoring is not required. The SMC was exceeded for $PM_{2.5}$ and therefore preconstruction monitoring may be required. Below addresses the request that the preconstruction monitoring requirement be met with existing regional monitors.

6.4.1 Pre-Construction Monitoring Waiver Request

By letter dated November 3, ,2021, FWNA was granted a waiver from the 40 CFR 52.21(m) requirement to conduct pre-construction site-specific monitoring of ambient air for the purpose of establishing background concentrations for the permit application required air quality impact analysis. The request and waiver are provided in Appendix O.

6.4.2 Ambient Background Concentrations

As part of the KDAQ response to the waiver request, FWNA was assigned the responsibilities of providing sufficient justification of a representative background monitoring location that fulfills the requirements of 401 KAR 51:017 and 40 CFR Part 51, Appendix W.

The purpose of representative background monitoring concentrations is to account for concentrations that are not attributed to the source or site being evaluated and not explicitly modeled in the air dispersion modeling analysis. The background concentration is to account for other emission sources such as natural sources, nearby sources other than the sources under consideration.

Per Section 8.3 of Appendix W, when determining background concentrations, the following should be considered:

- Background should not include the ambient impact of the project source or other nearby sources that are accounted for in the modeling;

- Ambient concentrations from natural sources in the area are typically accounted for in the background concentration.
- The dataset should be of sufficient completeness and follow appropriate data validation procedures.

The nearest PM_{10} monitor is located at 105 South 17th Street, Nashville, TN (Davidson County) at the Lockeland School (Lockeland Monitor – AQS Site ID 47-037-223). It is classified by USEPA as "Industrial".

The nearest $PM_{2.5}$ monitor is located at 226 Sunset Street, Smiths Grove, Bowling Green, Kentucky (Smiths Grove - AQS Site ID 21-227-0009). This monitor was used in the previous permit applications. The monitoring location is classified by USEPA as being "Residential", but the location is near a heavily populated and traveled area.

Both the Nashville and Bowling Green monitors meet the above requirements and provides a conservative background concentration for the FWNA location as both areas are urban locations.

To develop background concentrations, monitoring values were downloaded from EPA AirData Air Quality Monitors database for each of the two sites. Calendar years 2018-2020 were used for the Smiths Grove Site. Because the data was incomplete for the Lockeland Monitor for 2020, years 2018, 2019 and 2021 were used. As shown in Table 6-5 the resulting background concentration for the 24-hour PM_{10} standard is 35.67 µg/m3 and the background concentrations for the 24-hour and annual $PM_{2.5}$ standards are 16.77 µg/m3 and 7.79 µg/m3, respectively.

6.5 Regional Inventory Data

As identified above the SIL was exceed for the PM_{10} 24-hour standard, $PM_{2.5}$ 24-hour standard and the $PM_{2.5}$ annual standard. As such, it was necessary to develop regional inventory data for Class II modeling for each of these standards. Because of the facilities proximity to Tennessee, in addition to KDAQ, Tennessee Department of Environmental Conservation (TDEC) provided emission inventories of potential sources that can impact the air quality within the impact area. Both inventories together included approximately 11,000 records.

The regional modeling inventory information was compiled by determining all sources from the KDAQ and TDEC inventories located within a 50 km radius of the FWNA facility. As provided for in the air dispersion modeling protocol, EPA's 20D rule was used as a screening technique to allow the elimination of any sources where emissions (in tpy) are less than 20 times the distance from the source. Prior to applying the "20D Rule" various emission sources at a single facility were combined such that they were not eliminated. Appendix P provides the workbooks in electronic format showing the reduction in facilities.

Tables 6-6 and 6-7 provide the remaining sources PM_{10} and $PM_{2.5}$ sources, respectively. f

6.6 Cumulative Modeling Analysis

A Cumulative Analysis modeling was required for PM_{10} and $PM_{2.5}$ based on the screening model results discussed above; therefore, modeling was performed to demonstrate compliance with the NAAQS standards and PSD Increment values identified in Table 6-1.

6.6.1 National Ambient Air Quality Standard Modeling Results

To demonstrate compliance with the $PM_{2.5}$ annual standard, each year of meteorological data was modeled and the highest value from each of the five models was compared to the annual standard. To demonstrate compliance with the $PM_{2.5}$ and PM_{10} 24-hour standards the models were run with all five years of meteorological data. The NAAQS modeling includes all proposed emission sources at their maximum hourly emission rates identified in Table 6-2, as well as the off-site sources listed in Table 6-6 and 6-7. The refined PM_{10} and $PM_{2.5}$ modeling (NAAQS and PSD Increment) included only those receptors that were within the largest calculated SIA for the respective averaging time (as determined above the SIA is a radius of 2,907 m from the facility center.

Similar to the previous application, receptors on the property of Hanson Aggregate Franklin Quarry fenceline were removed from the refined modeling receptor set. Figure 6-8 identifies the receptor locations for the refined modeling at 100-meter spacing from the facility center to 3,000 meters in each direction. Source included in the modeling were the FWNA sources along with the applicable off-site sources.

Table 6-8 presents the summary of results for PM_{10} 24-hour and PM2.5 Annual model runs and demonstrates compliance with their respective standards.

6.6.2 PSD PM_{10} and $PM_{2.5}$ Increment Modeling Results

In addition to NAAQS modeling, the modeling also must demonstrate compliance with the PSD increment. The PSD increment, which can only be assessed through modeling, is the means by which the PSD rules prevent air quality from being deteriorate any more than that threshold.

The analysis starts with a baseline date and any emission sources added after that baseline date are included in the increment model runs. For major sources of PM_{10} the baseline date started in 1987 for $PM_{2.5}$ it was 2010. For minor sources the baseline date is established by the initial complete PSD application submitted in the Baseline Impact Area. This permit application was submitted on July 13, 2016, by FWNA. Therefore the final off-site source list must include any source. installed or modified after that date. Reviewing the sources, no emissions were identified from new or modified sources that should be included in the PSD Increment Modeling.

Table 6-9 compares the highest second high modeling 24-hour result for the each of the five years of meteorological data to the increment limit for PM_{10} and $PM_{2.5}$ while the highest high modeling results for each of the five years of meteorological data is used for the corresponding annual increment.

6.7 Class I Significance Analysis

Class I areas are federally protected areas for which more stringent air quality standards apply to protect unique natural, cultural, recreational, and/or historic values. The current Federal Land Manager (FLM) policies, as outlined in the FLAG document (2010 Federal Land Air Guidance) state that any Class I areas within 300 km of the proposed source as well as any other Class I areas that may be potentially affected should be identified and evaluated for potential air quality impacts on those Class I areas.

Table 6-10 lists these Class I areas, their location coordinates, their distance from the proposed site. each location. Figure 6-9 shows the Class I area locations in relation to the site. The below sections evaluate the potential impacts to those Class 1 area locations.

6.7.1 Class I Area Screening (Q/D) Analysis

There are five Class I areas within 300 km of the proposed FWNA foundry, the closest area is Mammoth Cave located approximately 51 km northeast of the proposed site.

To demonstrate the project will have no significant impacts on Class I air quality relative value (AQRV) including visibility the Federal Land Managers' Air Quality Related Values Work Group (FLAG) Phase I Report provides a Q/D screening criteria if the Class I Area is more than 50 km away. The Q/D screening criteria indicates that if the total sulfur dioxide (SO_2), nitrogen oxides (NO_x), PM_{10}, and sulfuric acid mist (H_2SO) annual emissions (in tons per year, based on 24-hour maximum allowable emissions), divided by the distance (in km) from the Class 1 area is less than 10, then the project is assumed to have no impact on AQRVs.

As shown in Table 3-2, the total annual visibility affecting emissions from the FWNA facility is 52.99 tpy (33.91 tpy PM_{10} + 1.04 SO_2 + 18.04 tpy NO_x). As the nearest Class I area is fifty-one kilometers away, the resulting Q/D is 1.04 which is well below the threshold of 10.

6.7.2 Class I Increment Evaluation

To evaluate the maximum potential impact of the FWNA facility on the Class I areas, AERMOD was used to determine concentrations at the boundary of the model to show the concentrations are decreasing as the emissions approach the nearest Class I location and that the maximum concentration was only a small portion of the Class I increment.

To accomplish this, receptors were placed at distances of 48 km, 49km and 50 km radius at +/- 5° from the centerline from the facility to each Class I area with 100 m spacing between receptors. For graphical purposes an additional radial receptor grid was established at 10°around the facility with receptors from 0 to 50 km with 1 km spacing. See Figure 10 for an illustration. To conduct the analysis the CY2020 meteorological data was used as that year produced both the highest annual and 24-hour $PM_{2.5}$ concentrations.

Figures 6-10 and 6-11 show a graphical representation of the 24-hour and annual concentrations decreasing in all directions with maximum modeled $PM_{2.5}$ 24-hour average concentration (H2H) of 0.10812 $\mu g/m^3$ at any one of the 48km, 49km or 50 km distances from the facility versus a PSD Class I increment of 2 $\mu g/m^3$. Similarly the $PM_{2.5}$ annual average concentration (H1H) maximum concentration of 0.00617 $\mu g/m^3$ compared to an increment of 1 $\mu g/m^3$. These results are summarized in Table 6-11.

6.8 Tier 1 Analysis – Consideration of Modeled Emission Rates for Precursors (MERPs)

KDAQ released a document entitled "Application of the . 's Modeled Emission Rates for Precursors (MERPS) for Secondary Pollutant Formation in Kentucky." Following release of this document, on April 30, 2019, USEPA issued an update to their guidance entitled "Guidance on the Development of Modeled Emission Rates for Precursors (MERPs) as a Tier 1 Demonstration Tool for Ozone and $PM_{2.5}$ under the PSD Permitting Program."

When modeled design concentrations are less than the applicable SIL, further analyses (NAAQS and PSD Increment) are not required for that pollutant-averaging period. If modeled impacts are greater than the SIL, a full NAAQS and PSD Increment analysis is required for that pollutant and averaging period to demonstrate that the facility neither causes nor contributes to any exceedances.

EPA recently issued guidance specifying a SIL value for ozone of 1 ppb and has developed a new demonstration methodology (the MERPs guidance) to provide a framework for a Tier 1 demonstration that can illustrate that a project will not cause or contribute to any violation of ambient ozone standards. The February 2019 Georgia EPD guidance document titled Guidance on the Use of EPA's MERPs to Account for Secondary Formation of Ozone and $PM_{2.5}$ in Georgia, which is based on the EPA MERPS guidance, was used to provide a Tier 1 demonstration that ozone impacts from the projects will not cause or contribute to ambient air quality levels of ozone. Both VOC and NOX emissions increases from the projects were considered. Details regarding that analysis can be found in Section 4.5.6 of this report.

In accordance with the revised and updated 40 CFR 51, Appendix W, precursor emission impacts to ozone and $PM_{2.5}$ (secondary $PM_{2.5}$) must be considered as part of the modeling analysis. The precursors to ground-level ozone formation are VOC and NOX, and the precursor emissions for secondary $PM_{2.5}$ formation are NO_X and SO_2.

In accordance with the revised and updated 40 CFR 51, Appendix W, precursor emission impacts to ozone and $PM_{2.5}$ (secondary $PM_{2.5}$) must be considered as part of the modeling analysis. The precursors to ground-level ozone formation are VOC and NOX, and the precursor emissions for secondary $PM_{2.5}$ formation are NO_X and SO_2.

Elevated ground-level ozone concentrations are the result of photochemical reactions among various chemical species. These reactions are more likely to occur under certain ambient conditions (e.g., high ground-level temperatures, light winds, and sunny conditions). The chemical species that contribute to ozone formation, referred to as ozone precursors, include NO_X and VOC emissions from both anthropogenic (e.g., mobile and stationary sources) and natural sources (e.g., vegetation). Pursuant to 40 CFR 52.21, ambient ozone monitoring is not required unless a project's emissions increase is greater than one hundred tpy of VOC or NOX.

6.8.1 $PM_{2.5}$ MERPs Assessment

As Outlined in Table 3 of the KDAQ 2018 guidance, the default MERP values (tpy) for KDAQ applications are 2,499 tpy NOx and 1,500 tpy SO2 for daily PM2.5 and 8,333 tpy NOx and 10,000 tpy SO2 for annual PM2.5.

The KDAQ 2018 guidance provides the following equation for determining if a cumulative analysis is necessary when the project emissions exceed the PM2.5 significant emission rate (SER) of ten tpy:

$$\frac{Max\ PM2.5\ ModeledConcentration}{PM2.5\ SIL} + \frac{SO2\ Emission\ Rate}{SO2\ MERP} + \frac{NOx\ Emission\ Rate}{NOx\ MERP} < 1$$

24-hour $PM_{2.5}$ Discrete Analysis:

Substituting the values for the 24-hour PM2.5 standard:

$$\frac{8.44059}{1.2} + \frac{1.04}{1{,}500} + \frac{18.04}{2{,}499} > 1$$

$$7.03 + 0.001 + 0.007 > 1$$

$$7.03 > 1$$

Annual $PM_{2.5}$ Discrete Analysis:

Substituting the values for the 24-hour PM2.5 standard:

$$\frac{1.59}{0.2} + \frac{1.04}{10{,}000} + \frac{18.04}{8{,}333} > 1$$

$$7.95 + 0.0001 + 0.002 > 1$$

$$7.95 > 1$$

Because both the 24-hour and Annual PM2.5 discrete analysis resulted in values greater than 1 a cumulative analysis must be conducted. Permit the guidance the PM2.5 cumulative analysis uses the following equation:

$$PM2.5\ BG + PM2.5\ DV + \left(\frac{SO2\ Emission\ Rate}{SO2\ MERP} + \frac{NOx\ Emission\ Rate}{NOx\ MERP}\right) * PM2.5\ SIL$$

$$\leq PM2.5\ NAAQS$$

24-hour $PM_{2.5}$ Cumulative Analysis:

$$16.77 + 7.39 + \left(\frac{1.04}{1{,}500} + \frac{18.04}{2{,}499}\right) * 1.2 \leq 35$$

$$16.77 + 7.39 + (0.001 + 0.007) * 1.2 \leq 35$$

$$16.77 + 7.39 + (0.001 + 0.007) * 1.2 \leq 35$$

$$24.10 \leq 35$$

Annual $PM_{2.5}$ Cumulative Analysis:

$$7.79 + 1.65 + \left(\frac{1.04}{10{,}000} + \frac{18.04}{8{,}333}\right) * 1.2 \leq 12$$

$$7.79 + 1.65 + (0.0001 + 0.002) * 1.2 \leq 12$$

$$9.44 \leq 12$$

6.8.2 Ozone MERPs Assessment

As Outlined in Table 3 of the KDAQ 2018 guidance, the default MERP values (tpy) for KDAQ applications are 169 tpy NOx and 3,333 tpy VOC for the 8-hour ozone standard.

For the SIL Analysis the guidance indicates the following equation should be used for the initial analysis and nothing further is required if this standard is met:

$$\frac{NOx\ Emission\ Rate}{NOx\ MERP} + \frac{VOC\ Emission\ Rate}{VOC\ MERP} < 1$$

Solving for the above equation provides the following:

$$\frac{18.04}{169} + \frac{112.45}{3{,}333} < 1$$

$$0.107 + 0.034 < 1$$

$$0.141 < 1$$

As the predicted ozone value is less than the threshold value of 1, the predicted impact of the projects is less than the ozone SIL (1 ppb). Therefore, there are no adverse impacts associated with precursor emissions for ozone as part of these projects, and a cumulative ozone analysis is not required.

6.9 Toxics Modeling

The project includes emissions of certain compounds that have a Regional Screening Level (RSL) value identified in EPA Region IX RSL tables. To demonstrate FWNA will comply with 401 KAR 63:020 that regulates potential hazardous matter or toxics substances (i.e., toxic air pollutants – TAPs) and in order to evaluate whether these toxic compounds are in sufficient concentration that they could present a health hazard, air dispersion modeling is conducted per KDAQ's request.

The same meteorological data and stack conditions described elsewhere are used to determine maximum annual ground level concentrations of each TAP. The maximum concentration of the receptors of concern are compared to the concentrations listed as having a significant health threat in EPA Region IX "Regional Screening Level (RSL) Resident Ambient Air Table (TR=1E-6, HQ=1) November 2021".

Similar to the initial application Figure 6-12 provides an area map and on this map, we located model receptors at location where individuals may be present for an extended period (residences, work areas etc.). This sensitive receptor set was then input to the model and using the same meteorological data and stack conditions described in this section, AERMOD was used to calculate the maximum annual ground level concentrations of each of the toxic compounds at each receptor.

The maximum concentration of all the receptors was compared to the RSL. Table 6-12 provides the results of this modeling that demonstrates that the maximum concentration found in our modeling are below the RSL listed values.

Section 7
Other Impact Analysis

PSD regulations require that additional impacts be considered as part of a PSD permit action. These include a growth analysis and a soil and vegetation analysis. The effect of the proposed project's emissions on local soils and vegetation is addressed through comparison of modeled impacts to secondary NAAQS and other relevant screening criteria that have been developed by the U.S. EPA to provide protection for public welfare, including protection against decreased visibility, damage to animals, crops, vegetation and buildings.

An economic growth analysis is intended to assess the amount of new growth that is likely to occur in support of the new project and to estimate emissions resulting from associated growth. Associated growth relates to any residential and commercial/industrial growth that may result from the construction of the proposed project. Residential growth depends on the number of new employees and the availability of housing in the area, while associated commercial and industrial growth consists of new sources providing services to the new employees and the facility.

This AIA assesses the environmental impact on soils, vegetation, and when necessary, the visibility caused by the increase in emissions following the projects and any associated impact resulting from associated industrial, commercial and residential growth. A separate task to assess the ambient air quality following the changes is completed and resulted in the demonstration that compliance with the National Ambient Air Quality Standards (NAAQS) and PSD Increments is provided in Section 6 of this document.

7.1 Ambient Air Quality Analysis

The ambient air quality analysis projects the air quality that will exist in the area of the proposed source during construction and after the plant begins operation.

As part of the PSD permit application, air dispersion modeling is conducted to demonstrate compliance with the National Ambient Air Quality Standards (NAAQS) and PSD Increments for significant pollutants of concern. The modeling included the foundry and machining emissions, nearby emission sources that could potentially impact the proposed location, and background concentrations to predict the resultant maximum ambient air quality impacts around the constructed facility. The results of the air dispersion modeling showed compliance with all applicable standards and/or requirements.

7.2 Class I Visibility

Visibility can be affected by plume impairment or regional haze. Plume impairment results when there is a contrast or color difference between the plume and a viewed background (the sky or a terrain feature). Plume impairment is generally only of concern when the Class I area is near the proposed source (i.e., less than 50 km). As the Mammoth Cave National Park is just over 50 km, the possibility of plume impairment will be assumed.

To address the above, the EPA New Source Review Workshop Manual recommends that a visibility analysis be conducted. There are three levels for the visibility analysis: Level 1, Level 2 and Level 3. A

Level 1 analysis is the most conservative and if the visibility screening criteria is not exceeded no further analysis is required.

VISCREEN was used to assess possible impacts on visibility due to the proposed project. VISCREEN is an EPA-approved model that assesses the visibility of plumes of emission sources from a vantage within the nearest Class I area. VISCREEN uses a very conservative approach to assess visibility impacts as it uses the "worse-case" meteorological values for wind speed and stability class.

VISCREEN requires inputs of emissions of particulate matter and nitrogen oxides (primary NO_2, primary SO_4 and soot are also considered if present). Table 3-2 annual PM and NOx emissions rates of 33.91 tpy and 18.04 tpy, respectively were used are shown in Table 7-1. Detailed emission calculations for total PM and NO_x can be found in tables in Appendix C.

The nearest Class I area is Mammoth Caves National Park located north-northeast from FWNA with a nearest boundary of 51 km and the farthest boundary of the wilderness area is estimated at 62 km. The observer distance was chosen at the nearest Class I area boundary.

The VISCREEN Summary Report is provided in Appendix Q and includes the distance and the observer angles, theta, azi, and alpha, present conservative line of sight values that maximize the light-scattering properties of the emissions from the proposed source. Results are given in the "Plume" columns of both the Delta-E and Contrast parameters. The criteria are also provided for comparison. The Delta-E is the color difference parameter that specifies the perceived changes of color and brightness. This is the primary basis for determining the perceptibility of plume visual impacts. The criteria used by VISCREEN for Delta-E is 2.0. The threshold value of perceptibility has been traditionally 1.0 for Delta-E and 0.02 for contrast. The Contrast column is the green contrast (0.55 km) which has a criteria value of 0.05.

As seen in the Summary Report all the modeled values for Delta-E and Contrast were well below the criteria values. Further analysis was not necessary as the Level 1 analysis indicates that none of the screening criteria were exceeded.

7.3 Secondary Impacts on Soil and Vegetation

No impacts are expected on soils or vegetation in either Simpson or the surrounding counties. Ambient concentrations of air pollutants that typically impact vegetation such as ozone, NO_x, and SO_2 are not significantly increased by the proposed project. The primary pollutant from the facility is carbon monoxide. NO_x and SO_2 emission increase were small enough that federal regulations do not require an ambient impact analysis. A qualitative assessment of the ozone impacts due to the direct emissions of VOC and NO_x was completed and has determined that it is very unlikely that secondary formation of ozone from VOC or NOx emissions, attributable to the project, will have a significant impact on the ozone levels in the area.

Conversion of nitrogen oxides (NO_x) and VOC emissions to tropospheric ozone is not instantaneous, but occurs over time, with the rate of conversion dependent upon weather conditions. The rate of ozone production can be limited by either VOCs or NO_2. In general, ozone formation using these two precursors is reliant upon the relative sources of hydroxide (OH) and NO_x. In urban areas with a high population concentration, ozone is often VOC-limited. Ozone is generally NO_x-limited in rural areas and downwind suburban areas" (EPA-452/R-08-003 March 2008). Further, ozone formation is recognized as a regional and long-range transport issue. Therefore, it is very unlikely that secondary formation of

ozone from VOC emissions attributable to the project will have a significant impact on the ozone levels in the area.

Particulate matter emissions from melting, pouring, cooling, shotblast, and grinding consist largely of oxides of iron. Particulate emissions from the mold and core production and shakeout consist mostly of sand, clay, and iron oxides. None of the particulate emissions are expected to have adverse impacts on soils or vegetation. Sand, clay, and iron oxides are common in the local soils. Particulate emissions from the foundry will not be acidic or caustic and are not expected to have any effects on soil, vegetation, or crops.

CO has not been found to produce detrimental effects on plants at concentrations below 100 ppm for exposures of one to three weeks. Since the ambient standards have been established at 35 ppm (40 mg/m^3) and 9 ppm (10 mg/m^3) for the 1-hour and 8-hour averages, respectively, there is no threat to plant life from CO emissions at the site.

7.4 Wildlife Impacts

Impacts to wildlife can occur due to direct uptake of pollutants through ingestion or via the skin and more indirectly as a result of air pollution induced changes to wildlife habitat and food source. Impacts of air pollution induced injury and death in wildlife has been focused on pollutants other than CO. It is likely any toxicity most severely in circumstances where air pollutants were likely elevated far above the ambient air quality standards (AAQS), or where significantly elevated concentrations of pollutants occurred on vegetation that is subsequently consumed.

A review of available information indicates there have been no observed adverse impacts to wildlife in the area due to the 1985 and 1992 projects. No pollutants were elevated above the AAQS nor were there elevated concentrations of pollutants that would have affected consumable vegetation.

7.5 Growth Analysis

The elements of the growth analysis include a projection of associated industrial, commercial, and residential growth that will occur in the area due to the proposed project and an estimate of the air emissions generated by such growth.

The FWNA foundry at full build-out will employ approximately two hundred and fifty people. This workforce comes from local communities, and because the foundry will be located approximately fifteen miles from Bowling Green, the remaining workforce will come from within that city area. Therefore, growth impacts are minimal and should not adversely affect the ambient air quality in the surrounding area. The site is bordered by two major roadways (I-65 and State Highway 31), so additional roadways are not planned.

No significant related increases in the residential, commercial, or industrial growth are anticipated in the area because of the construction and operation of the foundry and machining operations.

As no associated industrial or commercial growth is anticipated, no increase in “secondary emissions” or emissions from other facilities in the area are expected from the proposed construction of the new foundry.

7.6 Construction Impacts

The construction of the facility has already occurred. Please review the prior permit application packages if this subject is of interest.

Denotes secondary capture of emissions

Denotes emissions from control device are captured and vented out an alternative control device stack

Denotes emission unit is combined with another existing emission unit with CY2021 air permit application

Denotes emission unit, air pollution control device and/or stack are not installed at time of permit application

Denotes emission unit, air pollution control device and/or stack are not installed at time of permit application and will be combined with another unit

Note 1: PM, PM_{10} and $PM_{2.5}$ emissions are included in the emissions from the identified air pollution control device.

Note 2: Emissions from this air pollution control device are emitted inside the facility and subsequently captured via a second air pollution control device. Emissions are included in the project total as a portion of the emissions from the second control device.

Note 3: Total particulate emissons do not include the emissions from the emergency generators.

Table 5-6. BACT Determinations - Particulate Matter

Emission Unit	Description	BACT for PM	BACT for PM_{10}	BACT for $PM_{2.5}$	BACT Justification
EU01	Charge Handling	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	For this process there is no RBLC determination less than the proposed BACT for an APCD/stack that contains a source of significant condensable PM emissions. One RBLC entry for charge handling operation [RBLC ID MI-429] identified an outlet loading of 0.001 gr/dscf but the units routed to the stack (shotblasting, grinding and waste sand handling) do not have condensable particulates. For this emissions unit Method 5 was used to determine compliance.
EU07	Induction Furnace #1	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	For this process there is no RBLC determination less than the proposed BACT. For electric induction furnaces, there is one RLBC entry at 0.002 gr/dscf [RBLC ID MI-0429] and one RBLC entry of 0.003 gr/dscf [IN-0147].
EU08	Induction Furnace #2	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	For this process there is no RBLC determination less than the proposed BACT. For electric induction furnaces, there is one RLBC entry at 0.002 gr/dscf [RBLC ID MI-0429] and one RBLC entry of 0.003 gr/dscf [IN-0147].
EU09	Induction Furnace #3	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	For this process there is no RBLC determination less than the proposed BACT. For electric induction furnaces, there is one RLBC entry at 0.002 gr/dscf [RBLC ID MI-0429] and one RBLC entry of 0.003 gr/dscf [IN-0147].
EU10	Induction Furnace #4	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	For this process there is no RBLC determination less than the proposed BACT. For electric induction furnaces, there is one RLBC entry at 0.002 gr/dscf [RBLC ID MI-0429] and one RBLC entry of 0.003 gr/dscf [IN-0147].
EU13	Hot Metal Transfer	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There is one RLBC entry for Hot Metal Transfer at 0.002 gr/dscf [RBLC ID MI-0429].
EU17	Melt Baghouse Waste Dust Silo	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	For this process there is no RBLC determination less than the proposed BACT in the equivalent unit of gr/dscf. For silos, there is one additional RLBC entry at 0.003 gr/dscf [RBLC ID IN-0147].
EU19	Mold Silica Sand Silo	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	For this process there is no RBLC determination less than the proposed BACT in the equivalent unit of gr/dscf. For silos, there is one additional RLBC entry at 0.003 gr/dscf [RBLC ID IN-0147].
EU20	Blend Silo	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	For this process there is no RBLC determination less than the proposed BACT in the equivalent unit of gr/dscf. For silos, there is one additional RLBC entry at 0.003 gr/dscf [RBLC ID IN-0147].
EU21	Bentonite Silo	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	For this process, there is no RBLC determination less than the proposed BACT in the equivalent unit of gr/dscf. For silos, there is one additional RLBC entry at 0.003 gr/dscf [RBLC ID IN-0147].
EU22	Mold Sand Handling and Preparation	0.0025 gr/dscf 2.21 lb/hr 9.67 ton/yr	0.0025 gr/dscf 2.21 lb/hr 9.67 ton/yr	0.0025 gr/dscf 2.21 lb/hr 9.67 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There is one RLBC entry for Process ID 81.440 at 0.002 gr/dscf [RBLC ID MI-0429], one RBLC entry at 0.003 gr/dscf [IN-0147] and multiple entries at 0.005 gr/dscf [WI-0236 and WI-0238].
EU33	Mold Making #1	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There is one RLBC entry for Process ID 81.440 at 0.002 gr/dscf [RBLC ID MI-0429], one RBLC entry at 0.003 gr/dscf [IN-0147] and multiple entries at 0.005 gr/dscf [WI-0236 and WI-0238].
EU34	Mold Making #2	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There is one RLBC entry for Process ID 81.440 at 0.002 gr/dscf [RBLC ID MI-0429], one RBLC entry at 0.003 gr/dscf [IN-0147] and multiple entries at 0.005 gr/dscf [WI-0236 and WI-0238].
EU35A	Core Silica Sand Silo A	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	For this process there is no RBLC determination less than the proposed BACT in the equivalent unit of gr/dscf. For silos, there is one additional RLBC entry at 0.003 gr/dscf [RBLC ID IN-0147].

EU35B	Core Silica Sand Silo B	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	For this process there is no RBLC determination less than the proposed BACT in the equivalent unit of gr/dscf. For silos, there is one additional RLBC entry at 0.003 gr/dscf [RBLC ID IN-0147].
EU36	Core Sand Handling and Preparation	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There is one RLBC entry for Process ID 81.440 at 0.002 gr/dscf [RBLC ID MI-0429], one RBLC entry at 0.003 gr/dscf [IN-0147] and multiple entries at 0.005 gr/dscf [WI-0236 and WI-0238].
EU39	PUCB Core Machine #1	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There was one entry at 0.002 gr/dscf [MI-0429]. Emissions are not distinguishable in the RBLC between core sand handling (e.g. conveying, mixing) and generation of fugitive emissions during purging of catalyst.
EU40	PUCB Core Machine #2	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There was one entry at 0.002 gr/dscf [MI-0429]. Emissions are not distinguishable in the RBLC between core sand handling (e.g. conveying, mixing) and generation of fugitive emissions during purging of catalyst.
EU41	PUCB Core Machine #3	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There was one entry at 0.002 gr/dscf [MI-0429]. Emissions are not distinguishable in the RBLC between core sand handling (e.g. conveying, mixing) and generation of fugitive emissions during purging of catalyst.
EU42	PUCB Core Machine #4	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	0.0005 gr/dscf 0.065 lb/hr 0.283 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There was one entry at 0.002 gr/dscf [MI-0429]. Emissions are not distinguishable in the RBLC between core sand handling (e.g. conveying, mixing) and generation of fugitive emissions during purging of catalyst.
EU50	Pouring #1	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There is one RLBC entry for Process ID 81.450 at 0.002 gr/dscf [RBLC ID MI-0429], one RBLC entry at 0.0045 gr/dscf [WI-0256], and multiple entries at 0.005 gr/dscf [IN-0147, WI-0238, WI-0288, WI-0236 and WI-0238].
EU51	Pouring #2	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There is one RLBC entry for Process ID 81.450 at 0.002 gr/dscf [RBLC ID MI-0429], one RBLC entry at 0.0045 gr/dscf [WI-0256], and multiple entries at 0.005 gr/dscf [IN-0147, WI-0238, WI-0288, WI-0236 and WI-0238].
EU52	Mold Cooling	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	For this process there is no RBLC determination less than the proposed BACT. There is one RLBC entry for Process ID 81.450 at 0.002 gr/dscf [RBLC ID MI-0429], one RBLC entry at 0.0045 gr/dscf [WI-0256], and multiple entries at 0.005 gr/dscf [IN-0147, WI-0288, WI-0236 and WI-0238].
EU53	Shakeout Conveyor	0.0025 gr/dscf 2.21 lb/hr 9.67 ton/yr	0.0025 gr/dscf 2.21 lb/hr 9.67 ton/yr	0.0025 gr/dscf 2.21 lb/hr 9.67 ton/yr	For this process there is one RBLC determination less than the proposed BACT. Once facility [MI-0429], exhausts shakeout emissions to three different baghouses [C, D and E]. Baghouse C has an emisison limit of 0.0015 gr/dscf while Baghouses D and E have emisison rates of 0.002 gr/dscf. It is impossible to determine which of these three baghouses see the bulk of the condensable particulate emissions. Several other RBLC entries have emissions exceeding the proposed BACT including RBLC ID IN-0147 (0.003 gr/dscf), WI-0256 (0.0045 gr/dscf), WI-0239 (0.005 gr/dscf), WI-0238 (0.005 gr/dscf) and WI-0288 (0.005 gr/dscf),
EU57	Sand Plant Waste Sand Silo	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	For this process there is no RBLC determination less than the proposed BACT in the equivalent unit of gr/dscf. For silos, there is one additional RLBC entry at 0.003 gr/dscf [RBLC ID IN-0147].
EU59	Casting Cooling	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	For this process there is no RBLC determination less than the proposed BACT. The RBLC contains several entries above the proposed BACT including 0.003 gr/dscf [RBLC ID IN-0147], 0.0045 gr/dscf [RBLC ID WI-0256], and 0.005 gr/dscf [RBLC ID WI-0239, WI-0288].
EU60	Sorting Conveyor	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	For this process there is no RBLC determination less than the proposed BACT. The RBLC contains several entries above the proposed BACT including 0.003 gr/dscf [RBLC ID IN-0147] and multiple entries of 0.005 gr/dscf [RBLC WI-0288].
EU61	Steel Shot Blasting #1	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	For this process there is no RBLC determination less than the proposed BACT. The RBLC contains an entry equivalent to the proposed BACT [MI-0429] and several entries above the proposed BACT including 0.003 gr/dscf [RBLC ID IN-0147] and multiple entries of 0.005 gr/dscf [RBLC WI-0238, WI-0239, and WI-0288].

EU62	Steel Shot Blasting #2	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	For this process there is no RBLC determination less than the proposed BACT. The RBLC contains an entry equivalent to the proposed BACT [MI-0429] and several entries above the proposed BACT including 0.003 gr/dscf [RBLC ID IN-0147] and multiple entries of 0.005 gr/dscf [RBLC WI-0238, WI-0239, and WI-0288].
EU63	Fettling Baghouse Waste Dust Silo	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	0.003 gr/dscf 0.015 lb/hr 0.068 ton/yr	For this process, there is no RBLC determination less than the proposed BACT in the equivalent unit of gr/dscf. For silos, there is one additional RLBC entry at 0.003 gr/dscf [RBLC ID IN-0147].
EU64	Auto Grinding #1	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	For this process there is no RBLC determination less than the proposed BACT. The RBLC contains an entry equivalent to the proposed BACT [MI-0429] and multiple entries of 0.005 gr/dscf [RBLC WI-0238 and WI-0288].
EU65	Auto Grinding #2	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	For this process there is no RBLC determination less than the proposed BACT. The RBLC contains an entry equivalent to the proposed BACT [MI-0429] and multiple entries of 0.005 gr/dscf [RBLC WI-0238 and WI-0288].
EU66	Machining Lines (9)	0.0015 gr/dscf 0.259 lb/hr 1.133 ton/yr	0.0015 gr/dscf 0.259 lb/hr 1.133 ton/yr	0.0015 gr/dscf 0.259 lb/hr 1.133 ton/yr	There are no entries for this type of operation in the RBLC. Similar operations with larger baghouse are identified in the RBLC at 0.001 gr/dscf [MI-0429] and multiple entries of 0.005 gr/dscf [RBLC WI-0238 and WI-0288].
EU67	Perforation Lines (1)	0.0015 gr/dscf 0.259 lb/hr 1.133 ton/yr	0.0015 gr/dscf 0.259 lb/hr 1.133 ton/yr	0.0015 gr/dscf 0.259 lb/hr 1.133 ton/yr	There are no entries for this type of operation in the RBLC. Similar operations with larger baghouse are identified in the RBLC at 0.001 gr/dscf [MI-0429] and multiple entries of 0.005 gr/dscf [RBLC WI-0238 and WI-0288].
EU68	Paint Line #3	0.001 gr/dscf 0.023 lb/hr 0.101 ton/yr	0.001 gr/dscf 0.023 lb/hr 0.101 ton/yr	0.001 gr/dscf 0.023 lb/hr 0.101 ton/yr	For this process there were no RBLC determination under either iron and/or steel foundries. For miscellaneous metal parts and products [process id 81.44] only the FWNA was identified.
EU69	Paint Line #2	0.001 gr/dscf 0.023 lb/hr 0.101 ton/yr	0.001 gr/dscf 0.023 lb/hr 0.101 ton/yr	0.001 gr/dscf 0.023 lb/hr 0.101 ton/yr	For this process there were no RBLC determination under either iron and/or steel foundries. For miscellaneous metal parts and products [process id 81.44] only the FWNA was identified.
EU71	Paint Line #1	0.0015 gr/dscf 0.259 lb/hr 1.133 ton/yr	0.0015 gr/dscf 0.259 lb/hr 1.133 ton/yr	0.0015 gr/dscf 0.259 lb/hr 1.133 ton/yr	For this process there were no RBLC determination under either iron and/or steel foundries. For miscellaneous metal parts and products [process id 81.44] only the FWNA was identified.
EU77	Snag Grinder #1	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	For this process there is no RBLC determination less than the proposed BACT. The RBLC contains an entry equivalent to the proposed BACT [MI-0429] and multiple entries of 0.005 gr/dscf [RBLC WI-0238 and WI-0288].
EU78	Snag Grinder #2	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	0.001 gr/dscf 0.573 lb/hr 2.511 ton/yr	For this process there is no RBLC determination less than the proposed BACT. The RBLC contains an entry equivalent to the proposed BACT [MI-0429] and multiple entries of 0.005 gr/dscf [RBLC WI-0238 and WI-0288].

Table 5-12. BACT Determinations - Carbon Monoxide

Emission Unit	Description	BACT for CO	BACT Justification
EU07	Induction Furnace #1	0.5 lb/ton metal 5.0 lb/hr 5.724 ton/yr	For this process there is no RBLC determination less than the proposed BACT and their was no identification of an emission control device for carbon monoxide. There was one entry at 9.24 lb/hr [MI-0429] and another entry at 44.55 lb/hr [MI-0385]. The MI-0385 entry is for both melting and pouring and cannot be conditioned. It appears the MI-0429 is likely equivalent to 0.33 lb/ton metal but the exhaust gases are mixed with other processes.
EU08	Induction Furnace #2	0.5 lb/ton metal 5.0 lb/hr 5.724 ton/yr	For this process there is no RBLC determination less than the proposed BACT and their was no identification of an emission control device for carbon monoxide. There was one entry at 9.24 lb/hr [MI-0429] and another entry at 44.55 lb/hr [MI-0385]. The MI-0385 entry is for both melting and pouring and cannot be conditioned. It appears the MI-0429 is likely equivalent to 0.33 lb/ton metal but the exhaust gases are mixed with other processes.
EU09	Induction Furnace #3	0.5 lb/ton metal 5.0 lb/hr 5.724 ton/yr	For this process there is no RBLC determination less than the proposed BACT and their was no identification of an emission control device for carbon monoxide. There was one entry at 9.24 lb/hr [MI-0429] and another entry at 44.55 lb/hr [MI-0385]. The MI-0385 entry is for both melting and pouring and cannot be conditioned. It appears the MI-0429 is likely equivalent to 0.33 lb/ton metal but the exhaust gases are mixed with other processes.
EU10	Induction Furnace #4	0.5 lb/ton metal 5.0 lb/hr 5.724 ton/yr	For this process there is no RBLC determination less than the proposed BACT and their was no identification of an emission control device for carbon monoxide. There was one entry at 9.24 lb/hr [MI-0429] and another entry at 44.55 lb/hr [MI-0385]. The MI-0385 entry is for both melting and pouring and cannot be conditioned. It appears the MI-0429 is likely equivalent to 0.33 lb/ton metal but the exhaust gases are mixed with other processes.
EU50	Pouring #1	5 lb/ton metal 63.25 lb/hr 114.48 ton/yr	For this process there is no RBLC determination less than the proposed BACT and the only control method identified is "mold vent off gas ignition." There are three RBLC entries of 6 lb/ton [WI-0236 (under process 81.44), IN-0147) which appears likely for the addition of pouring, cooling and shakeout (PCS). There are equvalent emission limits of 5 lb/ton metal for several RBLC entries [RBLC ID WI-0238, WI-0256, WI-0288].
EU51	Pouring #2	5 lb/ton metal 63.25 lb/hr 114.48 ton/yr	For this process there is no RBLC determination less than the proposed BACT and the only control method identified is "mold vent off gas ignition." There are two RBLC entries of 6 lb/ton [WI-0236 (under process 81.44), IN-0147, IN-0188) which appears likely for the addition of pouring, cooling and shakeout (PCS). There are equvalent emission limits of 5 lb/ton metal for several RBLC entries [RBLC ID WI-0238, WI-0256, WI-0288].
EU52	Mold Cooling	See EU50 and EU51	See EU50 and EU51
EU53	Shakeout Conveyor	1 lb/ton metal 25.3 lb/hr 45.79 ton/yr	For this process there is no RBLC determination less than the proposed BACT and the only control method identified is "mold vent off gas ignition." There are two RBLC entries of 6 lb/ton [WI-0236 (under process 81.44), IN-0147, IN-0188) which appears likely for the addition of pouring, cooling and shakeout (PCS). There are equvalent emission limits of 1 lb/ton metal for several RBLC entries [RBLC ID WI-0238, WI-0239, WI-0256].

Table 5-21. BACT Determinations - Volatile Organic Compounds

Emission Unit	Description	BACT for CO	BACT Justification
EU07	Induction Furnace #1	0.09 lb/ton metal 0.93 lb/hr 1.065 ton/yr	The RBLC contains no identified of emission control for this process. Two RBLC determinations are less than the proposed BACT. This first emission rate is 0.84 lb/hr [MI-0429]) and another entry has an emission rate exceeding the proposed BACT but is for both melting and pouring operations (5.28 lb/hr [MI-0385]). It appears the MI-0429 is likely equivalent to 0.33 lb/ton metal but the exhaust gases are mixed with other processes.
EU08	Induction Furnace #2	0.09 lb/ton metal 0.93 lb/hr 1.065 ton/yr	The RBLC contains no identified of emission control for this process. Two RBLC determinations are less than the proposed BACT. This first emission rate is 0.84 lb/hr [MI-0429]) and another entry has an emission rate exceeding the proposed BACT but is for both melting and pouring operations (5.28 lb/hr [MI-0385]). It appears the MI-0429 is likely equivalent to 0.33 lb/ton metal but the exhaust gases are mixed with other processes.
EU09	Induction Furnace #3	0.09 lb/ton metal 0.93 lb/hr 1.065 ton/yr	The RBLC contains no identified of emission control for this process. Two RBLC determinations are less than the proposed BACT. This first emission rate is 0.84 lb/hr [MI-0429]) and another entry has an emission rate exceeding the proposed BACT but is for both melting and pouring operations (5.28 lb/hr [MI-0385]). It appears the MI-0429 is likely equivalent to 0.33 lb/ton metal but the exhaust gases are mixed with other processes.
EU10	Induction Furnace #4	0.09 lb/ton metal 0.93 lb/hr 1.065 ton/yr	The RBLC contains no identified of emission control for this process. Two RBLC determinations are less than the proposed BACT. This first emission rate is 0.84 lb/hr [MI-0429]) and another entry has an emission rate exceeding the proposed BACT but is for both melting and pouring operations (5.28 lb/hr [MI-0385]). It appears the MI-0429 is likely equivalent to 0.33 lb/ton metal but the exhaust gases are mixed with other processes.
EU39	PUCB Core Machine #1	4.556 lb/hr 8.327 ton/yr	For this process there is no RBLC determination less than the proposed BACT and no control method identified. Emissions are going to be dependent on binder technology used. It appears only the entries for MI-0429 is using a similar binder technology and has an emission rate of 14.47 lb/hr.
EU40	PUCB Core Machine #2	4.556 lb/hr 8.327 ton/yr	For this process there is no RBLC determination less than the proposed BACT and no control method identified. Emissions are going to be dependent on binder technology used. It appears only the entries for MI-0429 is using a similar binder technology and has an emission rate of 14.47 lb/hr.
EU41	PUCB Core Machine #3	4.556 lb/hr 8.327 ton/yr	For this process there is no RBLC determination less than the proposed BACT and no control method identified. Emissions are going to be dependent on binder technology used. It appears only the entries for MI-0429 is using a similar binder technology and has an emission rate of 14.47 lb/hr.
EU42	PUCB Core Machine #4	4.556 lb/hr 8.327 ton/yr	For this process there is no RBLC determination less than the proposed BACT and no control method identified. Emissions are going to be dependent on binder technology used. It appears only the entries for MI-0429 is using a similar binder technology and has an emission rate of 14.47 lb/hr.
EU43	Core Wash Station #1	5.130 lb/hr 1.026 ton/yr	For this process there is no RBLC determination less than the proposed BACT and no control method identified. Emissions are going to be dependent on binder technology used. It appears only the entries for MI-0429 is using a similar binder technology and has an emission rate of 1.43 lb/hr.
EU50	Pouring #1	0.5 lb/ton metal 6.325 lb/hr 11.448 ton/yr	For this process there is no RBLC determination less than the proposed BACT and the only control method identified is "mold vent off gas ignition." There are two RBLC entries of 0.5 lb/ton metal [WI-0238, WI-0256) and 1.8 lb/ton metal which is a chemically bonded mold [IN-0165]. In addition there are two entries for a total emission rate of 1.2 blt/on [IN-0257] and 1.4 lb/ton [IN-0288]. The equivalent emission rate for FWNA is 1.028 lb/ton metal which is less than both of these values.
EU51	Pouring #2	0.5 lb/ton metal 6.325 lb/hr 11.448 ton/yr	For this process there is no RBLC determination less than the proposed BACT and the only control method identified is "mold vent off gas ignition." There are two RBLC entries of 0.5 lb/ton metal [WI-0238, WI-0256) and 1.8 lb/ton metal which is a chemically bonded mold [IN-0165]. In addition there are two entries for a total emission rate of 1.2 blt/on [IN-0257] and 1.4 lb/ton [IN-0288]. The equivalent emission rate for FWNA is 1.028 lb/ton metal which is less than both of these values.

EU52	Mold Cooling	See EU50 and EU51	See EU50 and EU51
EU53	Shakeout Conveyor	0.528 lb/ton metal 13.358 lb/hr 24.179 ton/yr	For this process there is one RBLC determination less than the proposed BACT and the only control method identified is "mold vent off gas ignition." WI-0238 and WI-0256 have emission rates of 0.1 lb/ton metal. RBLC lists the compliance demonstration as unknown. The facility has been contacted and verified that they cannot meet this emission rate. In addition there are four entries for a total emission rate of 1.2 blt/on [IN-0257], 1.4 lb/ton [IN-0288], 1.4 lb/ton metal [IN-0188] and 1.9 lb/ton metal. The equivalent emission rate for FWNA is 1.028 lb/ton metal which is less than all four of these values.
EU68	Paint Line #3	2.218 lb/hr 9.713 ton/yr	For this process, there were no RBLC determination under either iron and/or steel foundries. For miscellaneous metal parts and products [process id 81.44] only the FWNA was identified. Cost effectiveness analysis supports the identified emission rates as BACT.
EU69	Paint Line #2	2.218 lb/hr 9.713 ton/yr	For this process, there were no RBLC determination under either iron and/or steel foundries. For miscellaneous metal parts and products [process id 81.44] only the FWNA was identified. Cost effectiveness analysis supports the identified emission rates as BACT.
EU71	Paint Line #1	0.513 lb/hr 2.244 ton/yr	For this process, there were no RBLC determination under either iron and/or steel foundries. For miscellaneous metal parts and products [process id 81.44] only the FWNA was identified. Cost effectiveness analysis supports the identified emission rates as BACT.
EU75	Diesel Storage Tank	0.918 lb/hr 0.069 ton/yr	The diesel storage tank shall be equipped with a permanent submerged fill pipe.
EU79	Core Wash Station #2	5.130 lb/hr 1.026 ton/yr	For this process there is no RBLC determination less than the proposed BACT and no control method identified. Emissions are going to be dependent on binder technology used. It appears only the entries for MI-0429 is using a similar binder technology and has an emission rate of 1.43 lb/hr.
EU80	Core Wash Station #3	5.130 lb/hr 1.026 ton/yr	For this process there is no RBLC determination less than the proposed BACT and no control method identified. Emissions are going to be dependent on binder technology used. It appears only the entries for MI-0429 is using a similar binder technology and has an emission rate of 1.43 lb/hr.
EU81	Core Wash Station #4	5.130 lb/hr 1.026 ton/yr	For this process there is no RBLC determination less than the proposed BACT and no control method identified. Emissions are going to be dependent on binder technology used. It appears only the entries for MI-0429 is using a similar binder technology and has an emission rate of 1.43 lb/hr.
EU82	Rust Preventative Application	2.500 lb/hr 1.000 ton/yr	For this process, there were no RBLC determination under either iron and/or steel foundries. For miscellaneous metal parts and products [process id 81.44] only the FWNA was identified. Emission rate could be supported by cost-effectiveness analysis.

Table 6-1. SMC, SIL, NAAQS and Increment Concentrations

Pollutant	Averaging Period	Significant Monitoring Concentration[a,k] ($\mu g/m^3$)	Class II SIL[e,g,k] ($\mu g/m^3$)	Primary NAAQS ($\mu g/m3$)	PSD Class II Increment[f] ($\mu g/m^3$)
PM_{10}	24-hour	10	5	150[b]	30[j]
	Annual	NA	1	Revoked[c]	17[k]
$PM_{2.5}$	24-hour	4[d]	1.2	35[h]	9[j]
	Annual	NA	0.2	12[i]	4[k]
CO[f]	1-hour	NA	2000	40000[j] (35 ppm)	-
	8-hour	575	500	10000[j] (9 ppm)	-

[a]401 KAR 51:017 Section 7(5)(a) and 40 CFR 52.21(i)(5)(i). See footnote d.

[b]Not to be exceeded more than three times in three consecutive years (H6H for all 5 years modeled together).

[c]Primary and secondary annual PM10 NAAQS of 50 µg/m3 was revoked effective 12/18/2006 [71 FR 6114].

[d]$PM_{2.5}$ SMC determined not authorized by CAA (court decision June 23, 2016), but EPA retains the argument that value can be used as part of an overall monitoring assessment.

[e]401 KAR 51:017 Section 9(2). See footnote g.

[f]401 KAR 51:017 Section 2(1).

[g]USEPA document "Guidance on SIL for Ozone and Fine Particles in PSD Permitting Program" (4/17/2018) identifies annual $PM_{2.5}$ Class II SIL value of 0.2 $\mu g/m^3$.

[h]3-year average of the 98th percentile 24-hour average concentration (H8H for each 1-year, 5 separate model runs are averaged together).

[i]3-year average of the annual arithmetic average concetnrations (H1H for each 1-year, 5 spearate model runs are averaged together).

[j]The maximum of the second highest 1-year concentration, 5 separate runs, maximum of the H2H concentrations.

[k]Single highest concentration during the 5-year modeling period.

PSD Construction/Title V Operating Permit Application
Fritz Winter North America, LP
Franklin, Kentucky

Maximum Yearly Capacity
91,586 Tons/Year

Flow Diagram Designation
Charge Handling
EU01

Maximum Hourly Capacity
25.30 Tons/Hour

Process Description:
Fritz Winter North America, LP
Charge Handling
Control Device: Melt Baghouse (CU01) Note 4
SCC Code:
Control Device Outlet: gr/dscf
Airflow: acfm
Stack Gas Temperature: °F

Facility Process Name:		**Criteria Pollutants**								
Charge Handling										
Emission Factor Basis:		**PM**	**PM10**	**PM2.5**	**SOx**	**NOx**	**VOC**	**CO**	**Lead**	**CO_2e**
Emission Factors:		0.07	0.07	0.06						
(source)		Note 1	Note 1	Note 2						
Capture Efficiencies:		100.00	100.00	100.00						
Maximum Stack Emission Rate:										
Hourly (lb/hr)		See air pollution control device worksheet for stack emissions								
Annual (TPY)										
Maximum Fugitive Emission Rate:										
Hourly (lb/hr)										
Annual (TPY)										
Total Emission Rate:										
Hourly (lb/hr)										
Annual (TPY)										

PROPOSED OPERATING SCHEDULE
24 HRS/DAY
8,760 HRS/YEAR

Note 1: Gutow Article, Modern Casting; January 1972; PM emissions from Raw material handling (0.04 lbs/ton) and charge makeup (0.03 lbs/ton) released to the atmosphere. All PM emission were conservatively assumed to be PM-10 emissions.
Note 2: Emission factor based on USEPA PM Calculator (March 2012) PM to $PM_{2.5}$ ratio and uncontrolled PM emission factor.
Note 3: The Alloy Storage emission unit (EU02) is included in this emission unit.
Note 4: Secondary capture of fugitive emissions per testing conducted pursuant to permit term EG01,3.I

EXAMPLE CALCULATIONS:
Maximum Emission Rate (lb/hr) {building exhausts} = (Emission Factor lb/ton) x (Maximum Hourly Rate tph) x (% returns/100 for PM10 only) x (1- %fugitive rate/100)
Maximum Emission Rate (lb/hr) {fugitive} = (Emission Factor lb/ton) x (Maximum Hourly Rate tph) x (%returns for PM10 only) x (% fugitive emissions rate/100)
Annual (TPY) Emission Rates = (lb/hr emission rate) x (Maximum Annual Melt Rate) / (Maximum Hourly Melt Rate) / (2000 lbs/ton)

PROPOSED OPERATING SCHEDULE
24 HRS/DAY
8,760 HRS/YEAR

Note 1: Emission factor from FIRE 6.25 SCC 3-04-003-03
Note 2: Emission factor based on USEPA PM Calculator (March 2012) PM to PM2.5 ratio and uncontrolled PM emission factor.
Note 3: March 2020 compliance test
Note 4: See below HAPs calculations
Note 5: Secondary capture of fugitive emissions per testing conducted (EG01,3.I)

EXAMPLE CALCULATIONS:
Maximum Stack Emission Rate (lb/hr) {PM & PM-10}=(gr/acfm) x (acfm) x (1 lb / 7000 grains) x (60 min / 1 hr)
Maximum Stack Emission Rate (lb/hr) {Lead}=(gr/acfm) x (acfm) x (1 lb / 7000 grains) x (60 min / 1 hr)*(Lead EF/PM EF)
Maximum Annual (Ton/yr) Stack Emission Rates = (lb/hr emission rate) x (hours of operation per year at max. rate) x (ton/2000 lbs)
Maximum Fugitive Emission Rate (lb/hr) = ((1 - Capture Efficiency/100) x (Emission Factor) x (Melt ton/hr) x (1-(Settling Factor)/100)
Maximum Annual Fugitive Emissions (ton/yr)= (Hourly fugitive emissions (lb/hr)/ hourly Process rate (ton/hr) x (Annual process rate (tons/yr) x (ton/2000 lbs)
Total Emission Rate (lb/hr) = (Maximum Stack Emission Rate lb/hr) + (Maximum Fugitive Emission Rate lb/hr)
Total Emission Rates Annual (TPY)= (annual stack emissions (ton/yr)) + (annual fugitive emissions (ton/yr))

PROPOSED OPERATING SCHEDULE
24 HRS/DAY
8,760 HRS/YEAR

Note 1: Stack test at Quality Castings, Orrville, OH.
Note 2: WebFIRE (Aug 20, 2021) SCC 30400320
Note 3: Emission factors taken from the document entitled "Foundry Process Emission Factors: Baseline Emissions from Automotive Foundries in Mexico"; (CERP-Mexico); Table 5.12
Note 4: FWNA Original Application/BACT, using Waupaca RBLC entries and air volumes
Note 5: Emission factor based on USEPA PM Calculator (March 2012) PM to PM2.5 ratio and uncontrolled PM emission factor.

EXAMPLE CALCULATIONS:
Maximum Stack Emission Rate (lb/hr) {PM,PM-10} =(gr/acfm) x (acfm) x (1 lb /
Maximum Stack Emission Rate (lb/hr) {Lead} =(gr/acfm) x (acfm) x (1 lb / 7000 grains) x (60 min / 1 hr) x (
Maximum Stack Emissions Rate (lb/hr) {SOx,NOx, VOC, CO} =(Max. Rated Capa
Maximum Annual (Ton/yr) PM, PM10 and lead stack Emission Rates = (lb/hr emission rate) x (hours of ope
Maximum Annual (ton/yr) SOx NOx, VOC and CO stack emissions= (Hourly stack emissions (lb/hr)/ hourly Process rate (ton/hr) x (Annual process rate (tons/yr) x (ton/2000 lbs)
Maximum Fugitive Emission Rate (lb/hr) = ((1 - Capture Efficiency/100) x (Emission Factor) x (Melt ton/hr) x (1-(Settling Factor)/100)
Maximum Annual Fugitive Emissions (ton/yr)= (Hourly fugitive emissions (lb/hr)/ hourly Process rate (ton/hr) x (Annual process rate (tons/yr) x (ton/2000 lbs)
Total Emission Rate (lb/hr) = (Maximum Stack Emission Rate lb/hr) + (Maximum Fugitive Emission Rate lb/hr)
Total Emission Rates Annual (TPY)= (annual stack emissions (ton/yr)) + (annual fugitive emissions (ton/yr))

PROPOSED OPERATING SCHEDULE
24 HRS/DAY
8,760 HRS/YEAR

Note 1: Stack test at Quality Castings, Orrville, OH.
Note 2: WebFIRE (Aug 20, 2021) SCC 30400320
Note 3: Emission factors taken from the document entitled "Foundry Process Emission Factors: Baseline Emissions from Automotive Foundries in Mexico"; (CERP-Mexico); Table 5.12
Note 4: FWNA Original Application/BACT, using Waupaca RBLC entries and air volumes
Note 5: Emission factor based on USEPA PM Calculator (March 2012) PM to PM2.5 ratio and uncontrolled PM emission factor.

EXAMPLE CALCULATIONS:
Maximum Stack Emission Rate (lb/hr) {PM,PM-10} =(gr/acfm) x (acfm) x (1 lb /
Maximum Stack Emission Rate (lb/hr) {Lead} =(gr/acfm) x (acfm) x (1 lb / 7000 grains) x (60 min / 1 hr) x (
Maximum Stack Emissions Rate (lb/hr) {SOx,NOx, VOC, CO} =(Max. Rated Capa
Maximum Annual (Ton/yr) PM, PM10 and lead stack Emission Rates = (lb/hr emission rate) x (hours of ope
Maximum Annual (ton/yr) SOx NOx, VOC and CO stack emissions= (Hourly stack emissions (lb/hr)/ hourly Process rate (ton/hr) x (Annual process rate (tons/yr) x (ton/2000 lbs)
Maximum Fugitive Emission Rate (lb/hr) = ((1 - Capture Efficiency/100) x (Emission Factor) x (Melt ton/hr) x (1-(Settling Factor)/100)
Maximum Annual Fugitive Emissions (ton/yr)= (Hourly fugitive emissions (lb/hr)/ hourly Process rate (ton/hr) x (Annual process rate (tons/yr) x (ton/2000 lbs)
Total Emission Rate (lb/hr) = (Maximum Stack Emission Rate lb/hr) + (Maximum Fugitive Emission Rate lb/hr)
Total Emission Rates Annual (TPY)= (annual stack emissions (ton/yr)) + (annual fugitive emissions (ton/yr))

Maximum Hourly Capacity
3.54 Lbs/Hour

Process Description:
Fritz Winter North America, LP
Paint Line #1
Control Device: Paint Line #1 Booth Filter (CU17)
SCC Code:
Control Device Outlet: gr/dscf
Airflow: acfm
Stack Gas Temperature: °F

Facility Process Name:		**Criteria Pollutants**								
Paint Line #1										
Emission Factor Basis:		**PM**	**PM10**	**PM2.5**	**SOx**	**NOx**	**VOC**	**CO**	**Lead**	**CO_2e**
Emission Factors:	lb/lb	0.34	0.34	0.34			0.14			
(source)		Note 1	Note 2	Note 2			Note 3			
Capture Efficiency		100.00	100.00	100.00			100.00			
Control Efficiency		99.50	99.50	99.50						
Transfer Efficiency		70.00	70.00	70.00						
Maximum Stack Emission Rate:										
Hourly (lb/hr)		See air pollution control device worksheet for stack emissions					0.513			
Annual (TPY)							**2.244**			
Maximum Fugitive Emission Rate:										
Hourly (lb/hr)										
Annual (TPY)										
Total Emission Rate:										
Hourly (lb/hr)							0.513			
Annual (TPY)							**2.244**			

PROPOSED OPERATING SCHEDULE
24 HRS/DAY
8,760 HRS/YEAR

Note 1: Geomet 360 SDS (midpoint of % solids range)
Note 2: Assumes PM_{10} and $PM_{2.5}$ is equal to PM
Note 3: Geomet 360 Air Quality Data Sheet (1.6 lb/gal VOC at coating density of 11.05 lbs/gal
Note 4: Above quantities and emission factors disregard DI water that is used as a thinner

EXAMPLE CALCULATIONS:
Maximum Stack Emission Rate (lb/hr) {PM,PM-10} =(gr/acfm) x (acfm) x (1 lb / 7000 grains) x (60 min / 1 hr)
Maximum Annual (Ton/yr) stack Emission Rates = (lb/hr emission rate) x (hours of operation per year at max. rate) x (ton/2000 lbs)
Maximum Fugitive Emission Rate (lb/hr) = ((1 - Capture Efficiency/100) x (Emission Factor) x (Melt ton/hr) x (1-(Settling Factor)/100)
Maximum Annual Fugitive Emissions (ton/yr)= (Hourly fugitive emissions (lb/hr)/ hourly Process rate (ton/hr) x (Annual process rate (tons/yr) x (ton/2000 lbs)
Total Emission Rate (lb/hr) = (Maximum Stack Emission Rate lb/hr) + (Maximum Fugitive Emission Rate lb/hr)
Total Emission Rates Annual (TPY)= (annual stack emissions (ton/yr)) + (annual fugitive emissions (ton/yr))

PROPOSED OPERATING SCHEDULE
1.25 HRS/DAY
Note 3 125 HRS/YEAR

Note 1: Requested BACT PM, PM10 and PM2.5 emission limit
Note 2: Expected air volume when delivering dust pnuematically from truck to silo.
Note 3: Pnuematic conveying of sand from truck to silo is approximately 1.25 hrs/day, 2 days/week, 50 weeks/yr

EXAMPLE CALCULATIONS:
Maximum Stack Emission Rate (lb/hr) {PM,PM-10} =(gr/acfm) x (acfm) x (1 lb / 7000 grains) x (60 min / 1 hr)
Maximum Annual (Ton/yr) stack Emission Rates = (lb/hr emission rate) x (hours of operation per year at max. rate) x (ton/2000 lbs)
Maximum Fugitive Emission Rate (lb/hr) = ((1 - Capture Efficiency/100) x (Emission Factor) x (Melt ton/hr) x (1-(Settling Factor)/100)
Maximum Annual Fugitive Emissions (ton/yr)= (Hourly fugitive emissions (lb/hr)/ hourly Process rate (ton/hr) x (Annual process rate (tons/yr) x (ton/2000 lbs)
Total Emission Rate (lb/hr) = (Maximum Stack Emission Rate lb/hr) + (Maximum Fugitive Emission Rate lb/hr)
Total Emission Rates Annual (TPY)= (annual stack emissions (ton/yr)) + (annual fugitive emissions (ton/yr))

PROPOSED OPERATING SCHEDULE
24 HRS/DAY
8,760 HRS/YEAR

Note 1: Control device emits into plant environment as fugitive emissions.
Note 2: Secondary capture of fugitive emissions per testing conducted (EG01,3.I)
Note 3: Emissions are captured and emitted via Paint Line #1 Booth Filter (CU17) stack (ST15c)

EXAMPLE CALCULATIONS:
Maximum Stack Emission Rate (lb/hr) {PM,PM-10} =(gr/acfm) x (acfm) x (1 lb / 7000 grains) x (60 min / 1 hr)
Maximum Annual (Ton/yr) stack Emission Rates = (lb/hr emission rate) x (hours of operation per year at max. rate) x (ton/2000 lbs)
Maximum Fugitive Emission Rate (lb/hr) = ((1 - Capture Efficiency/100) x (Emission Factor) x (Melt ton/hr) x (1-(Settling Factor)/100)
Maximum Annual Fugitive Emissions (ton/yr)= (Hourly fugitive emissions (lb/hr)/ hourly Process rate (ton/hr) x (Annual process rate (tons/yr) x (ton/2000 lbs)
Total Emission Rate (lb/hr) = (Maximum Stack Emission Rate lb/hr) + (Maximum Fugitive Emission Rate lb/hr)
Total Emission Rates Annual (TPY)= (annual stack emissions (ton/yr)) + (annual fugitive emissions (ton/yr))

PROPOSED OPERATING SCHEDULE

Note 4 1.25 HRS/DAY
Note 4 125 HRS/YEAR

Note 1: Control device emits into plant environment as fugitive emissions.
Note 2: Secondary capture of fugitive emissions per testing conducted (EG01,3.I)
Note 3: Emissions are captured and emitted via Core/Mold Baghouse (CU08) stack (ST09)
Note 4: Pnuematic conveying of sand from truck to silo is approximately 1.25 hrs/day, 2 days/week, 50 weeks/yr

EXAMPLE CALCULATIONS:
Maximum Stack Emission Rate (lb/hr) {PM,PM-10} =(gr/acfm) x (acfm) x (1 lb / 7000 grains) x (60 min / 1 hr)
Maximum Annual (Ton/yr) stack Emission Rates = (lb/hr emission rate) x (hours of operation per year at max. rate) x (ton/2000 lbs)
Maximum Fugitive Emission Rate (lb/hr) = ((1 - Capture Efficiency/100) x (Emission Factor) x (Melt ton/hr) x (1-(Settling Factor)/100)
Maximum Annual Fugitive Emissions (ton/yr)= (Hourly fugitive emissions (lb/hr)/ hourly Process rate (ton/hr) x (Annual process rate (tons/yr) x (ton/2000 lbs)
Total Emission Rate (lb/hr) = (Maximum Stack Emission Rate lb/hr) + (Maximum Fugitive Emission Rate lb/hr)
Total Emission Rates Annual (TPY)= (annual stack emissions (ton/yr)) + (annual fugitive emissions (ton/yr))

Safety Data Sheet

1. PRODUCT AND COMPANY IDENTIFICATION

Product Name: **Silica Sand**
Formula: SiO_2
CAS No.: 14808-60-7
Recommended Use: Foundry and proppant sand

Company Identification: **A.F. Gelhar Co., Inc.**
N2402 County Road A
Fairwater, Wisconsin 53931
920-398-3566 (7:30 am - 5 pm central time)

2. HAZARDS IDENTIFICATION

GHS Classification
Carc. 1A H350
STOT SE 3 H335
STOT RE 1 H372

GHS Labeling
Symbol:

GHS07

GHS08

Signal Word: **DANGER**

Hazard Statements:
H320 Causes eye irritation.
H335 May cause respiratory irritation
H350 May cause cancer by inhalation.
H372 Causes damage to organs (lungs/respiratory system) through prolonged or repeated exposure by inhalation.

Precautionary Statements:
P202 Do not handle until the safety information presented in this SDS has been read and understood.
P260 DO NOT BREATHE DUST.
P270 Do not eat, drink or smoke while handling this product.
P280 Wear eye protection, protective clothing, protective gloves
P264 Wash skin thoroughly after handling.
P304/P340 IF INHALED: Remove person to fresh air and keep comfortable for breathing.
P308/P313 IF exposed or concerned: Get medical advice/attention
P312 Call POISIN CENTER/doctor if you feel unwell
P403/P233 Store in a well ventilated place. Keep container tightly closed
P501 Dispose of contents/containers according to local, regional, national, and international regulations

Avoid creating dust when handling, using or storing. Use with adequate ventilation to keep exposure below recommended exposure limits. Wear eye protection and respiratory protection following this SDS, NIOSH guidelines and other applicable regulations.

Hazards Not Otherwise Classified:
No additional information available

OSHA Hazards
No additional information available

Target Organs
Lungs

Potential Immediate Health Effects
No additional information available

3. COMPOSITION

Substances:

Names	Product Identifier	Composition %	GHS-US classification
Silica Quartz	CAS# 14808-60-7	96 - 99.6	Carc. 1A, H350 STOT SE 3, H335 STOT RE 1, H372

Mixtures:
Not applicable

4. FIRST AID MEASURES

Description of first aid measures:

First-aid measures general:	If medical advice is needed, have product container or label at hand.
First-aid measures after inhalation:	If inhaled, remove to fresh air and keep at rest in a position comfortable for breathing. Obtain medical attention if breathing difficulty persists
First-aid measures after skin contact:	Rinse immediately with plenty of water. Gently wash with plenty of soap and water. Obtain medical attention if irritation persists.
First-aid measures after eye contact:	Immediately rinse with water for a prolonged period while holding the eyelids wide open. Seek medical attention if material is embedded in eye. If eye irritation persists: Get medical advice and
First-aid measures after ingestion:	If swallowed, do not induce vomiting: seek medical advice immediately and show this container or label.

Symptoms & side effects:

Symptoms/injuries:	Repeated or prolonged inhalation may damage lungs.
Symptoms/injuries after inhalation:	May cause irritation to the respiratory tract, sneezing, coughing, burning sensation of throat with constricting sensation of the larynx and difficulty in breathing.
Symptoms/injuries after skin contact:	Prolonged contact with large amounts of dust may cause mechanical irritation. Dust may cause irritation in skin folds or by contact in combination with tight clothing.
Symptoms/injuries after eye contact:	Redness, pain.
Symptoms/injuries after ingestion:	Abdominal pain.
Chronic symptoms:	Respiratory difficulties. May cause cancer.

5. FIRE-FIGHTING MEASURES

Suitable Extinguishing Media:
Material is not flammable

Unsuitable Extinguishing Media:
Material is not flammable

Special Protective Equipment for Fire-Fighters:
Material is not flammable

6. ACCIDENTAL RELEASE MEASURES

Personal Precautions:

General measures:	Do not breathe dust. Avoid generation of dust during clean-up of spills. Recover the product by vacuuming, shoveling or sweeping. Vacuum must be fitted with HEPA filter to prevent release of particulates during clean-up.
Protective equipment:	Wear suitable protective clothing, gloves and eye/face protection. Use recommended respiratory protection.
Emergency procedures:	Collect as solid.

Environmental Precautions:
No additional information is available.

Methods and Materials for Containment and Clean-up

Methods for cleaning up:	Avoid generation of dust during clean-up of spills. Recover the product by vacuuming, shoveling or sweeping. Vacuum must be fitted with HEPA filter to prevent release of particulates during clean-up.

7. HANDLING AND STORAGE

Precautions for Safe Handling:

Additional hazards when processed:	Do not breathe dust.
Precautions for safe handling:	Avoid creating or spreading dust
Hygiene measures:	Handle in accordance with good industrial hygiene and safety procedures. Always wash your hands immediately after handling this product, and once again before leaving the workplace. Do not eat, drink or smoke in areas where product is used.

Recommended Conditions for Storage

Storage conditions:	Store in a dry, cool place. Keep container tightly closed.
Incompatible materials:	In finely divided state: reacts with (strong) oxidizers such as: hydrofluoric acid, chlorine trifluoride, oxygen difluoride, fluorine.
Special rules on packaging:	Keep container closed when no in use.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Exposure limits:

Chemical	CAS No.	ACGIH TWA (mg/m^3)	US IDHL (mg/m^3)	USA NIOSH REL TWA (mg/m^3)	USA OSHA PEL TWA (mg/m^3)
Quartz	14808-60-7	0.025	50	0.05	(30)/(%SiO2 + 2) = mg/m^3 total dust (10)/(%SiO2 + 2) = mg/m^3 respirable

Engineering controls:
Ensure adequate ventilation, especially in confined areas. Avoid dust production.

Personal protective equipment:
In case of dust production: dustproof clothing. In case of dust production: protective goggles. Insufficient ventilation: wear respiratory protection. High dust production: self-contained breathing apparatus.

Hand Protection:
Impermeable protective gloves.

Skin and Body Protection:
Handle in accordance with good industrial hygiene and safety practice. Always wash your hands immediately after handling this product, and once again before leaving the workplace. Wear suitable protective clothing. Wash contaminated clothing before reuse.

Eye protection:
Protective goggles.

Respiratory protection:
Use NIOSH-approved air-purifying or supplied-air respirator where airborne concentrations of dust are expected to exceed exposure limits.

Consumer exposure controls:
Do not breathe dust. Wear recommended personal protective equipment.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance:	Solid
Odor:	Odorless
Odor threshold:	No data available
pH:	No data available
Melting Point:	No data available
Freezing Point:	No data available
Evaporation Rate:	No data available
Flammability:	No data available
Explosion Limits:	No data available
Vapor Pressure:	No data available
Vapor Density:	No data available
Specific Gravity:	No data available
Solubility in Water:	No data available
Partition coefficient:	No data available
Auto-ignition temp.:	No data available
Decomposition temp.:	No data available
Viscosity:	No data available
Other:	No data available

10. STABILITY AND REACTIVITY

Chemical stability:
Stable under normal temperature and pressure:

Conditions to Avoid:
None known.

Hazardous Decomposition Products:
Quartz (silica) will dissolve in hydrofluoric acid producing corrosive gas, silicon tetrafluoride.

11. TOXICOLOGICAL INFORMATION

Acute Toxicity:
Not classified.

Skin corrosion/irritation:
Not classified.

Serious eye damage/irritation:
Not classified.

Respiratory of skin sensitization:
Not classified.

Germ cell mutagenicity:
Not classified.

Carcinogenicity:
May cause cancer (inhalation).

Quartz Cas 14808-60-7

IRAC group:	Group 1
National Toxicity Program (NTP) Status:	Known Human Carcinogen

Reproductive toxicity:
Not classified.

Specific target organ toxicity (single exposure):
May cause respiratory irritation.

Specific target organ toxicity (repeated exposure):
Causes damage to organs (lung/respiratory) through prolonged or repeated exposure (inhalation).

Additional information:
Repeated or prolonged exposure to respirable crystalline silica dust will cause lung damage in the form of silicosis. Symptoms will include progressively more difficult breathing, cough, fever, and weight loss. Acute silicosis can be fatal.

Aspiration Hazard:
Not classified

12. ECOLOGICAL INFORMATION

Toxicity:
No additional information available.

Persistence and Degradability:
Not readily biodegradable.

Bioaccumulative Potential:
Not expected to bioaccumulate.

Mobility:
No additional information available.

PBT and vPvB assessment:
No additional information available.

Other Adverse Effects
No additional information available.

13. DISPOSAL CONSIDERATIONS

Regional legislation (waste):
Disposal must nbe done in accordance to local, state, and federal regulations

Waste Disposal recommendations:
Not a hazardous waste, per RCRA.

14. TRANSPORT INFORMATION

DOT (US):
Not applicable

IMDG:
Not applicable

IATA:
Not applicable

15. REGULATORY INFORMATION

SARA 302 Compounds
No SARA 302 chemicals present

SARA 313 Compounds
No SARA 313 chemicals present

SARA 311/312 Hazards
Immediate (acute) health hazard.
Delayed (chronic) health hazard.

TSCA listed substances:
Quartz CAS #14808-60-7

National regulations:
Quartz CAS #14808-60-7
Listed on IARC (International Agency for Research on Cancer)
Listed as carcinogen on NTP (National Toxicology Program)

US State Regulations
U.S. - California - Proposition 65 – Carcinogen
WARNING! This product contains Quartz, a substance known to the State of California to cause cancer.

U.S. - Hawaii - Occupational Exposure Limits - TWAs

16. OTHER INFORMATION

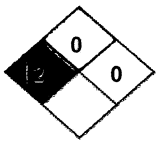
HMIS Classification:

Health Hazard:	2
Chronic Health Hazard:	-
Flammability:	0
Physical Hazards:	0
Personal Protection:	E

(Safety glasses, gloves, and dust respirator)

NFPA Rating:

Health Hazard:	2
Fire:	0
Reactivity Hazard:	0
Special Hazard:	None



Full text of H- phrases:

Carc. 1A	Carcinogenicity Category 1A
STOT RE 1	Specific target organ toxicity (repeated exposure) Category 1
STOT SE 3	Specific target organ toxicity (single exposure) Category 3
H335	May cause respiratory irritation
H350	May cause cancer
H372	Causes damage to organs through prolonged or repeated exposure

No data is available, per 29 CFR 1910.1200(d)(b); health hazards are based upon all of the components which make up the mixture.

The above information is believed to be correct, but is not purported to be all-inclusive and should only be used as a guide. Because data, safety standards, and regulatory inputs are subject to change, no warranty, guarantee, or representation with respect to the completeness or continuing accuracy of the information contained in this document is made. The user of this product must decide what safety measures are necessary to safely use this product; the conditions of handling and use, or misuse, are beyond the control of A.F. Gelhar Co., Inc.. The user is also responsible to determine its environmental regulatory compliance obligations under any applicable federal or state laws.

SAFETY DATA SHEET

Product Trade Name: **IKOQUICK® Grade Bentonite**

Revision Date: 30-Aug-2016

1. CHEMICAL PRODUCT AND COMPANY IDENTIFICATION

Product Trade Name:	IKOQUICK® Grade Bentonite
Synonyms:	None
Chemical Family:	Mineral
Application:	Additive
Manufacturer/Supplier	**S&B Industrial Minerals NA, Inc.** 100 Mansell Ct., Suite 300, Roswell, GA30076 Telephone: (319) 235-1900 Fax: (319) 232-7966 Emergency Telephone: (800) 424-9300 Call Chemtrec
Prepared By	EHS&Q Coordinator Telephone: 1-319-235-1900

2. HAZARD(S) IDENTIFICATION

Classification:	STOT RE1
Signal Word:	**DANGER**
Hazard Statement:	Causes damage to lungs through prolonged or repeated exposure via inhalation.
Precautionary statements:	Do not breathe dust In case of inadequate ventilation wear respiratory protection Dispose of contents/containers in accordance with local regulation
Other:	Long term exposure can cause lung injury (silicosis). IARC and NTP have determined that crystalline silica inhaled from occupational sources can cause cancer in humans. Risk of injury is dependent on the duration and level of exposure.

3. COMPOSITION/INFORMATION ON INGREDIENTS

SUBSTANCE	CAS Number	PERCENT	ACGIH TLV-TWA	OSHA PEL-TWA
Bentonite	1302-78-9	> 75%		5 mg/m^3 Respirable Dust 15 mg/m^3 Total Dust
Calcium Carbonate	1317-65-3	3 – 15%	10 mg/m^3	5 mg/m^3 Respirable Dust 15 mg/m^3 Total Dust
Graphite	7782-42-5	1 - 5%	2 mg/m^3	15 mppcf
Crystalline Silica in the form of Quartz (Naturally Occurring) Total Dust Respirable	14808-60-7	< 2.0%	0.025 mg/m^3	<u>30 mg/m^3</u> %SiO2 + 2 <u>10 mg/m^3</u> %SiO2 + 2

More restrictive exposure limits may be enforced by some states, agencies, or other authorities.

4. FIRST AID MEASURES

Inhalation If inhaled, remove from area to fresh air. Get medical attention if respiratory irritation develops or if breathing becomes difficult.

Skin Wash with soap and water. Get medical attention if irritation persists.

Eyes In case of contact, immediately flush eyes with plenty of water for at least 15 minutes and get medical attention if irritation persists.

Ingestion Do not induce vomiting. Slowly dilute with 1-2 glasses of water or milk and seek medical attention. Never give anything by mouth to an unconscious person.

Notes to Physician Treat symptomatically.

5. FIRE FIGHTING MEASURES

Flash Point/Range (F): Not Determined
Flash Point/Range (C): Not Determined
Flash Point Method: Not Determined
Autoignition Temperature (F): Not Determined
Autoignition Temperature (C): Not Determined
Flammability Limits in Air - Lower (%): Not Determined
Flammability Limits in Air - Upper (%): Not Determined

Fire Extinguishing Media Water fog, carbon dioxide, foam, dry chemical.

Special Exposure Hazards Use with adequate ventilation to keep exposures below recommended limits. Good housekeeping practices are required to minimize this potential.

Special Protective Equipment for Fire-Fighters	Full protective clothing and approved self-contained breathing apparatus required for fire fighting personnel.
NFPA Ratings:	Health 1, Flammability 0, Reactivity 0
HMIS Ratings:	Health 1*, Flammability 0, Reactivity 0

6. ACCIDENTAL RELEASE MEASURES

Personal Precautionary Measures	Use appropriate protective equipment. Avoid creating and breathing dust.
Environmental Precautionary Measures	Prevent from entering sewers, waterways, or low areas.
Procedure for Cleaning / Absorption	Collect using dustless method and hold for appropriate disposal. Consider possible toxic or fire hazards associated with contaminating substances and use appropriate methods for collection, storage and disposal.

7. HANDLING AND STORAGE

Handling Precautions	This product contains quartz, which may become airborne without a visible cloud. Avoid breathing dust. Avoid creating dusty conditions. Use only with adequate ventilation to keep exposure below recommended exposure limits. Wear a NIOSH certified, European Standard En 149, or equivalent respirator when using this product. Wash hands after use. Material is slippery when wet.
Storage Information	Store away from oxidizers. Use good housekeeping in storage and work areas to prevent accumulation of dust. Close container when not in use. Do not reuse empty container.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Engineering Controls	Use approved industrial ventilation and local exhaust as required to maintain exposures below applicable exposure limits listed in Section 3.
Respiratory Protection	Wear a NIOSH certified, European Standard EN 149, or equivalent respirator when using this product.
Hand Protection	Protective gloves.
Skin Protection	Wear clothing appropriate for the work environment. Dusty clothing should be laundered before reuse. Use precautionary measures to avoid creating dust when removing or laundering clothing.
Eye Protection	Wear safety glasses or goggles to protect against exposure.
Other Precautions	None known.

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical State:	Solid
Color:	Tan, Light Grey
Odor:	Odorless
pH:	7 – 10.5
Specific Gravity @ 20 C (Water=1):	1.7 – 2.65
Density @ 20 C (lbs./gallon):	Not Determined
Bulk Density @ 20 C (lbs/ft3):	44 - 58
Boiling Point/Range (F):	Not Determined
Boiling Point/Range (C):	Not Determined
Freezing Point/Range (F):	Not Determined
Freezing Point/Range (C):	Not Determined
Vapor Pressure @ 20 C (mmHg):	Not Determined
Vapor Density (Air=1):	Not Determined
Percent Volatiles:	Not Determined
Evaporation Rate (Butyl Acetate=1):	Not Determined
Solubility in Water (g/100ml):	Insoluble
Solubility in Solvents (g/100ml):	Not Determined
VOCs (lbs./gallon):	Not Determined
Viscosity, Dynamic @ 20 C (centipoise):	Not Determined
Viscosity, Kinematic @ 20 C (centistrokes):	Not Determined
Partition Coefficient/n-Octanol/Water:	Not Determined
Molecular Weight (g/mole):	Not Determined

10. STABILITY AND REACTIVITY

Stability Data:	Stable
Hazardous Polymerization:	Will Not Occur
Conditions to Avoid	None anticipated
Incompatibility (Materials to Avoid)	Strong oxidizers.
Hazardous Decomposition Products	Oxides of Carbon. Carbon monoxide and carbon dioxide. Amorphous silica may transform at elevated temperatures to tridymite (870 C) or cristobalite (1470 C).

Additional Guidelines Not Applicable

11. TOXICOLOGICAL INFORMATION

Principle Rout of Exposure	Eye or skin contact, inhalation
Inhalation	Inhaled crystalline silica in the form of quartz or cristobalite from occupational sources is carcinogenic to humans (IARC, Group1). There is sufficient evidence in experimental animals for the carcinogenicity of tridymite (IARC Group 2A).
Skin Contact	May cause mechanical skin irritation.
Eye Contact	May cause eye irritation.
Ingestion	None Known
Aggravated Medical Conditions	Individuals with respiratory disease, including but not limited to asthma and bronchitis, or subject to eye irritation, should not be exposed to quartz dust.

Chronic Effects/Carcinogenicity Cancer Status: In 2011, The International Agency for Research on Cancer (IARC) concluded that crystalline silica in the form of quartz or cristobalite dust is carcinogenic to humans (IARC Group 1). Prolonged inhalation of silica dust may result in silicosis, a progressive, disabling, and sometimes fatal, lung disease. Avoid creating dusty conditions and use a NIOSH/MSHA approved dust respirator when Threshold limit Values (TLVs) may be exceeded.

Other Information

Toxicity Tests

Oral Toxicity:	Not determined
Dermal Toxicity:	Not determined
Inhalation Toxicity:	Not determined
Primary Irritation Effect:	Not determined
Carcinogenicity	Refer to IARC Monograph 100 volume C (2011).
Genotoxicity:	Not determined
Reproductive / Developmental Toxicity:	Not determined

12. ECOLOGICAL INFORMATION

Mobility (Water/Soil/Air)	Not determined
Persistence/Degradability	Not determined
Bio-accumulation	Not Determined

Ecotoxicological Information

Acute Fish Toxicity:	Not determined
Acute Crustaceans Toxicity:	Not determined
Acute Algae Toxicity:	Not determined

Chemical Fate Information	Not determined
Other Information	Not applicable

13. DISPOSAL CONSIDERATIONS

Disposal Method	Disposal should be made in accordance with federal, state, and local regulations.
Contaminated Packaging	Follow all applicable national or local regulations.

14. TRANSPORT INFORMATION

Land Transportation

DOT
Not restricted

Canadian TDG

Autoignition Temperature (F): Not Determined
Autoignition Temperature (C): Not Determined
Flammability Limits in Air - Lower (%): Not Determined
Flammability Limits in Air - Upper (%): Not Determined

Fire Extinguishing Media Water fog, carbon dioxide, foam, dry chemical.

Special Exposure Hazards	This product contains coal. At high temperatures toxic hydrocarbon gases may be formed; use with adequate ventilation to keep exposures below recommended limits. Good housekeeping practices are required to minimize this potential. Material becomes slippery when wet.
Special Protective Equipment for Fire-Fighters	Full protective clothing and approved self-contained breathing apparatus required for fire fighting personnel.
NFPA Ratings:	Health 1, Flammability 0, Reactivity 0
HMIS Ratings:	Health 1*, Flammability 0, Reactivity 0

6. ACCIDENTAL RELEASE MEASURES

Personal Precautionary Measures	Use appropriate protective equipment. Avoid creating and breathing dust.
Environmental Precautionary Measures	Prevent from entering sewers, waterways, or low areas.
Procedure for Cleaning / Absorption	Collect using dustless method and hold for appropriate disposal. Consider possible toxic or fire hazards associated with contaminating substances and use appropriate methods for collection, storage and disposal.

7. HANDLING AND STORAGE

Handling Precautions	This product contains quartz, which may become airborne without a visible cloud. Avoid breathing dust. Avoid creating dusty conditions. Use only with adequate ventilation to keep exposure below recommended exposure limits. Wear a NIOSH certified, European Standard En 149, or equivalent respirator when using this product. Wash hands after use. Material is slippery when wet.
Storage Information	Store away from oxidizers. Use good housekeeping in storage and work areas to prevent accumulation of dust. Close container when not in use. Do not reuse empty container.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Engineering Controls	Use approved industrial ventilation and local exhaust as required to maintain exposures below applicable exposure limits listed in Section 3.
Respiratory Protection	Wear a NIOSH certified, European Standard EN 149, or equivalent respirator when using this product.
Hand Protection	Impervious rubber gloves.
Skin Protection	Wear clothing appropriate for the work environment. Dusty clothing should be laundered before reuse. Use precautionary measures to avoid creating dust when removing or laundering clothing.
Eye Protection	Wear safety glasses or goggles to protect against exposure.
Other Precautions	None known.

9. PHYSICAL AND CHEMICAL PROPERTIES

Physical State:	Solid
Color:	Light Gray to Dark Gray
Odor:	Odorless
pH:	7 - 10
Specific Gravity @ 20 C (Water=1):	1.7 – 2.65
Density @ 20 C (lbs./gallon):	Not Determined
Bulk Density @ 20 C (lbs/ft3):	44 - 58

Safety Data Sheet
ZIP-SLIP™ LR57HP RELEASE AGENT

Version 1.1 | Revision Date 02/08/2019 | Print Date 02/28/2020

SECTION 1. IDENTIFICATION

Product name : ZIP-SLIP™ LR57HP RELEASE AGENT
Material : 851625

Manufacturer or supplier's details

Company : ASK CHEMICALS LLC
Address : 495 Metro Place South Suite 250
Dublin, OH 43017
United States of America
Emergency telephone number : 1-855-ASK4YOU (1-855-275-4968)
E-mail address : EHSRequests.usa@ask-chemicals.com

SECTION 2. HAZARDS IDENTIFICATION

GHS Classification

Not a hazardous substance or mixture.

GHS label elements

Not a hazardous substance or mixture.

Other hazards

None known.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Substance / Mixture : Mixture

Hazardous components

Chemical name	CAS-No.	Concentration (%)
DISTILLATES (PETROLEUM), HYDROTREATED HEAVY PARAFFINIC	64742-54-7	>= 90 - <= 100
OLEIC ACID	112-80-1	>= 5 - < 10

SECTION 4. FIRST AID MEASURES

General advice : Do not leave the victim unattended.

If inhaled : Remove person to fresh air. If signs/symptoms continue, get medical attention.

If unconscious place in recovery position and seek medical advice.
If symptoms persist, call a physician.

In case of skin contact : Flush skin with large amounts of water. If irritation develops and persists, get medical attention.

In case of eye contact : Flush eyes with water at least 15 minutes. Get medical attention if eye irritation develops or persists.

Remove contact lenses.
Protect unharmed eye.
If eye irritation persists, consult a specialist.

If swallowed : If swallowed, DO NOT induce vomiting unless directed to do so by medical personnel.

Keep respiratory tract clear.
Do not give milk or alcoholic beverages.
Never give anything by mouth to an unconscious person.
If symptoms persist, call a physician.

Most important symptoms and effects, both acute and delayed : None known.

SECTION 5. FIREFIGHTING MEASURES

Suitable extinguishing media : Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

Further information : Standard procedure for chemical fires.
Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.

Special protective equipment for firefighters : Wear self contained breathing apparatus for fire fighting if necessary.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Methods and materials for containment and cleaning up : Wipe up with absorbent material (e.g. cloth, fleece).
Keep in suitable, closed containers for disposal.

SECTION 7. HANDLING AND STORAGE

Advice on protection against fire and explosion : Normal measures for preventive fire protection.

Advice on safe handling : For personal protection see section 8.
Smoking, eating and drinking should be prohibited in the application area.

Conditions for safe storage : Electrical installations / working materials must comply with the technological safety standards.

Materials to avoid : No materials to be especially mentioned.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Components with workplace control parameters

Components	CAS-No.	Value type	Control parame-	Basis

		(Form of exposure)	ters / Permissible concentration	
DISTILLATES (PETROLEUM), HYDROTREATED HEAVY PARAFFINIC	64742-54-7	TWA (Mist)	5 mg/m3	OSHA Z-1
		TWA (Inhalable fraction)	5 mg/m3	ACGIH
		TWA	5 mg/m3	OSHA P0
		TWA (Mist)	5 mg/m3	NIOSH REL
		ST (Mist)	10 mg/m3	NIOSH REL
		TWA (Mist)	5 mg/m3	OSHA P0
		PEL (particulate)	5 mg/m3	CAL PEL

Personal protective equipment

Respiratory protection : No personal respiratory protective equipment normally required.

Eye protection : Safety glasses

Skin and body protection : Protective suit

Hygiene measures : General industrial hygiene practice.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance : liquid

Colour : no data available

Odour : no data available

Odour Threshold : no data available

pH : no data available

Melting point : no data available

Boiling point : no data available

Flash point : 239 °C

Evaporation rate : no data available

Flammability (solid, gas) : no data available

Burning rate : no data available

Upper explosion limit : no data available

Lower explosion limit : no data available

Vapour pressure : no data available

Relative vapour density	:	no data available
Relative density	:	no data available
Density	:	0.846 g/cm3 (20 °C)
Bulk density	:	no data available
Solubility(ies)		
Water solubility	:	no data available
Solubility in other solvents	:	no data available
Partition coefficient: n-octanol/water	:	no data available
Auto-ignition temperature	:	no data available
Decomposition temperature	:	no data available
Viscosity		
Viscosity, dynamic	:	no data available
Viscosity, kinematic	:	no data available

SECTION 10. STABILITY AND REACTIVITY

Reactivity	:	No decomposition if stored and applied as directed.
Chemical stability	:	Stable No decomposition if stored and applied as directed.
Possibility of hazardous reactions	:	Stable under recommended storage conditions. No hazards to be specially mentioned.
Conditions to avoid	:	no data available

SECTION 11. TOXICOLOGICAL INFORMATION

Acute toxicity

Components:

DISTILLATES (PETROLEUM), HYDROTREATED HEAVY PARAFFINIC:

Acute oral toxicity	:	LD50 (rat): > 15,000 mg/kg
Acute dermal toxicity	:	LD50 (rabbit): > 5,000 mg/kg

OLEIC ACID:

Acute oral toxicity	:	LD50 (rat): 25,000 mg/kg

Skin corrosion/irritation

Components:

DISTILLATES (PETROLEUM), HYDROTREATED HEAVY PARAFFINIC:
Assessment: Mild skin irritation
Result: Mild skin irritation

OLEIC ACID:
Assessment: Mild skin irritation
Result: Mild skin irritation

Serious eye damage/eye irritation

Components:

DISTILLATES (PETROLEUM), HYDROTREATED HEAVY PARAFFINIC:
Result: No eye irritation
Assessment: No eye irritation

OLEIC ACID:
Result: Mild eye irritation
Assessment: Mild eye irritation

Carcinogenicity

IARC	No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.
OSHA	No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.
NTP	No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

Further information

Product:
Remarks: no data available

SECTION 12. ECOLOGICAL INFORMATION

Ecotoxicity
No data available

Persistence and degradability
No data available

Bioaccumulative potential
No data available

Mobility in soil
No data available

Other adverse effects

Product:

Ozone-Depletion Potential	:	Regulation: 40 CFR Protection of Environment; Part 82 Protection of Stratospheric Ozone - CAA Section 602 Class I Substances Remarks: This product neither contains, nor was manufactured with a Class I or Class II ODS as defined by the U.S. Clean Air Act Section 602 (40 CFR 82, Subpt. A, App.A + B).
Additional ecological information	:	no data available

SECTION 13. DISPOSAL CONSIDERATIONS

Disposal methods

Waste from residues	:	Dispose of in accordance with all applicable local, state and federal regulations.
Contaminated packaging	:	Empty containers should be taken to an approved waste handling site for recycling or disposal.

SECTION 14. TRANSPORT INFORMATION

REGULATION
U.S. DOT - ROAD

SECTION 15. REGULATORY INFORMATION

EPCRA - Emergency Planning and Community Right-to-Know Act

CERCLA Reportable Quantity

This material does not contain any components with a CERCLA RQ.

SARA 304 Extremely Hazardous Substances Reportable Quantity

This material does not contain any components with a section 304 EHS RQ.

SARA 311/312 Hazards	:	No SARA Hazards
SARA 302	:	This material does not contain any components with a section 302 EHS TPQ.
SARA 313	:	SARA 313: This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Section 313.
California Prop 65		This product does not contain any chemicals known to State of California to cause cancer, birth defects, or any other reproductive harm.

The components of this product are reported in the following inventories:

TSCA	:	On TSCA Inventory
DSL	:	All components of this product are on the Canadian DSL.
AICS	:	On the inventory, or in compliance with the inventory
NZIoC	:	On the inventory, or in compliance with the inventory
ENCS	:	Not in compliance with the inventory
KECI	:	On the inventory, or in compliance with the inventory
PICCS	:	On the inventory, or in compliance with the inventory
IECSC	:	On the inventory, or in compliance with the inventory

Inventories

AICS (Australia), DSL (Canada), IECSC (China), REACH (European Union), ENCS (Japan), ISHL (Japan), KECI (Korea), NZIoC (New Zealand), PICCS (Philippines), TCSI (Taiwan), TSCA (USA)

Safety Data Sheet
ISOCURE FOCUS I 109 BINDER TW936

SECTION 1. IDENTIFICATION

Product name	:	ISOCURE FOCUS I 109 BINDER TW936
Product code	:	R0389443
Material	:	769169

Manufacturer or supplier's details

Company	:	ASK Chemicals L.P.
Address	:	495 Metro Place South Suite 250 Dublin, OH 43017 United States of America
Emergency telephone number	:	1-855-ASK4YOU (1-855-275-4968)
E-mail address	:	EHSRequests.usa@ask-chemicals.com

SECTION 2. HAZARDS IDENTIFICATION

GHS Classification

Skin irritation	:	Category 2
Serious eye damage	:	Category 1
Germ cell mutagenicity	:	Category 2
Specific target organ toxicity - repeated exposure	:	Category 2

GHS Label element

Hazard pictograms :

Signal word : Danger

Hazard statements : H315 Causes skin irritation.
H318 Causes serious eye damage.
H341 Suspected of causing genetic defects.
H373 May cause damage to organs through prolonged or repeated exposure.

Precautionary statements : **Prevention:**
P201 Obtain special instructions before use.
P202 Do not handle until all safety precautions have been read and understood.
P260 Do not breathe dust/ fume/ gas/ mist/ vapours/ spray.
P264 Wash skin thoroughly after handling.
P280 Wear eye protection/ face protection.
P280 Wear protective gloves.
P281 Use personal protective equipment as required.
Response:
P302 + P352 IF ON SKIN: Wash with plenty of soap and water.
P305 + P351 + P338 IF IN EYES: Rinse cautiously with water

for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P308 + P313 IF exposed or concerned: Get medical advice/ attention.
P310 Immediately call a POISON CENTER or doctor/ physician.
P332 + P313 If skin irritation occurs: Get medical advice/ attention.
P362 Take off contaminated clothing and wash before reuse.
Storage:
P405 Store locked up.
Disposal:
P501 Dispose of contents/ container to an approved waste disposal plant.

Other hazards

None known.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Hazardous components

Chemical Name	CAS-No.	Concentration (%)
DIMETHYL GLUTARATE	1119-40-0	>= 10 - < 20
RAPESEED OIL FATTY ACIDS, METHYL ESTERS	73891-99-3	>= 10 - < 20
DIMETHYL SUCCINATE	106-65-0	>= 5 - < 10
DIMETHYL ADIPATE	627-93-0	>= 5 - < 10
PHENOL	108-95-2	>= 1 - < 5
DIISOBUTYL PHTHALATE	84-69-5	>= 1 - < 5

SECTION 4. FIRST AID MEASURES

General advice	:	Consult a physician.
If inhaled	:	Remove person to fresh air. If signs/symptoms continue, get medical attention.
In case of skin contact	:	Take off contaminated clothing and shoes immediately. If on skin, rinse well with water. If on clothes, remove clothes.
In case of eye contact	:	Remove contact lenses. Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes.
If swallowed	:	If swallowed, DO NOT induce vomiting unless directed to do so by medical personnel.
Most important symptoms and effects, both acute and delayed	:	None known.

SECTION 5. FIREFIGHTING MEASURES

Suitable extinguishing media	:	Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.
Specific hazards during firefighting	:	Do not use a solid water stream as it may scatter and spread fire. Cool closed containers exposed to fire with water spray.
Special protective equipment for firefighters	:	In the event of fire, wear self-contained breathing apparatus.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures	:	Use personal protective equipment. Ensure adequate ventilation. Evacuate personnel to safe areas. Keep people away from and upwind of spill/leak. Material can create slippery conditions.
Environmental precautions	:	Local authorities should be advised if significant spillages cannot be contained.
Methods and materials for containment and cleaning up	:	Keep in suitable, closed containers for disposal. Clean contaminated floors and objects thoroughly while observing environmental regulations.

SECTION 7. HANDLING AND STORAGE

Advice on safe handling	:	Avoid contact with skin and eyes. For personal protection see section 8. Smoking, eating and drinking should be prohibited in the application area.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Components with workplace control parameters

Components	CAS-No.	Value type (Form of exposure)	Control parameters / Permissible concentration	Basis
PHENOL	108-95-2	TWA	5 ppm	ACGIH
		TWA	5 ppm 19 mg/m3	NIOSH REL
		C	15.6 ppm 60 mg/m3	NIOSH REL
		TWA	5 ppm 19 mg/m3	OSHA Z-1
		TWA	5 ppm 19 mg/m3	OSHA P0

Personal protective equipment

Eye protection	:	Wear face-shield and protective suit for abnormal processing problems.

Proper eye protection according to ANSI Z87.1 must be worn.

Protective measures	:	Wear suitable protective equipment. Avoid contact with skin. When using do not eat, drink or smoke.
Hygiene measures	:	Avoid contact with skin, eyes and clothing. Wash hands before breaks and immediately after handling the product. Remove contaminated clothing and protective equipment before entering eating areas.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance	:	liquid
Colour	:	amber
Odour	:	mild
Odour Threshold	:	no data available
pH	:	no data available
Melting point	:	no data available
Boiling point	:	181.75 °C (1,013 hPa) Calculated Phase Transition Liquid/Gas
Flash point	:	> 93.4 °C Method: Seta closed cup
Evaporation rate	:	no data available
Flammability (solid, gas)	:	no data available
Burning rate	:	no data available
Upper explosion limit	:	8.6 %(V) Calculated Explosive Limit
Lower explosion limit	:	0.9 %(V) Calculated Explosive Limit
Vapour pressure	:	3 hPa (25 °C) Calculated Vapor Pressure
Relative vapour density	:	no data available
Relative density	:	1.106 (77.00 °F)
Density	:	1.106 g/cm3 (77.00 °F)
Bulk density	:	no data available

Solubility(ies)
Water solubility : no data available

Solubility in other solvents : no data available

Partition coefficient: n-octanol/water : no data available

Auto-ignition temperature : no data available

Decomposition temperature : no data available

Viscosity
Viscosity, dynamic : 480 mPa.s

Viscosity, kinematic : no data available

SECTION 10. STABILITY AND REACTIVITY

Chemical stability : Stable

SECTION 11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure
Skin Absorption

Acute toxicity

Product:

Acute oral toxicity : Acute toxicity estimate: 2,806 mg/kg
Method: Calculation method

Acute inhalation toxicity : Acute toxicity estimate: 34.96 mg/l
Exposure time: 4 h
Test atmosphere: vapour
Method: Calculation method

Acute dermal toxicity : Acute toxicity estimate: > 5,000 mg/kg
Method: Calculation method

Components:

DIMETHYL GLUTARATE:
Acute oral toxicity : LD50 (rat): 8,191 mg/kg

Acute inhalation toxicity : LC50 (rat): > 5.6 mg/l
Exposure time: 4 h

RAPESEED OIL FATTY ACIDS, METHYL ESTERS:
Acute oral toxicity : LD50 (rat): > 2,000 mg/kg

DIMETHYL SUCCINATE:
Acute oral toxicity : LD50 (rat): > 5,000 mg/kg

Acute dermal toxicity : LD50 (rabbit): > 5,000 mg/kg

PHENOL:

Acute oral toxicity	:	LD50 (rat): 317 mg/kg Acute toxicity estimate: 100 mg/kg Method: Converted acute toxicity point estimate
Acute inhalation toxicity	:	LC50 (rat): 0.316 mg/l Exposure time: 4 h Test atmosphere: vapour
Acute dermal toxicity	:	LD50 (rabbit): 850 mg/kg Acute toxicity estimate: 300 mg/kg Method: Converted acute toxicity point estimate

DIISOBUTYL PHTHALATE:

Acute oral toxicity	:	LD50 (rat): 15,000 mg/kg LD50 (mouse): 12,800 mg/kg
Acute toxicity (other routes of administration)	:	LD 50 (Mouse): 4.5 g/kg Application Route: Intraperitoneal Remarks: This data record is no longer present in the Ariel database LD 50 (Rat): 3.8 g/kg Application Route: Intraperitoneal Remarks: This data record is no longer present in the Ariel database

Skin corrosion/irritation

Components:

DIMETHYL GLUTARATE:
Assessment: Irritating to skin.
Result: Irritating to skin.

RAPESEED OIL FATTY ACIDS, METHYL ESTERS:
Assessment: Mild skin irritation
Result: Mild skin irritation

DIMETHYL SUCCINATE:
Assessment: No skin irritation
Result: No skin irritation

DIMETHYL ADIPATE:
Assessment: Mild skin irritation
Result: Mild skin irritation

PHENOL:
Assessment: Corrosive
Result: Corrosive

Assessment: Severe skin irritation
Result: Severe skin irritation

DIISOBUTYL PHTHALATE:
Assessment: Mild skin irritation
Result: Mild skin irritation

Serious eye damage/eye irritation

Components:
DIMETHYL GLUTARATE:
Result: Irritating to eyes.
Assessment: Irritating to eyes.

RAPESEED OIL FATTY ACIDS, METHYL ESTERS:
Result: No eye irritation
Assessment: No eye irritation

DIMETHYL SUCCINATE:
Result: Irritating to eyes.
Assessment: Irritating to eyes.

DIMETHYL ADIPATE:
Result: Irritating to eyes.
Assessment: Irritating to eyes.

PHENOL:
Result: Blindness
Assessment: Blindness

Result: Irritating to eyes.
Assessment: Irritating to eyes.

Result: Risk of serious damage to eyes.
Assessment: Risk of serious damage to eyes.

DIISOBUTYL PHTHALATE:
Result: Mild eye irritation
Assessment: Mild eye irritation

Carcinogenicity

IARC	No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.
OSHA	No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.
NTP	No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

Further information

Components:
PHENOL:

Remarks: Central nervous system

Remarks: Blood

SECTION 12. ECOLOGICAL INFORMATION

Ecotoxicity

Components:

PHENOL:

Toxicity to fish : LC 50 (Rainbow trout,donaldson trout (Oncorhynchus mykiss)): 7.5 - 14 mg/l
Exposure time: 96 h
Method: Static
Remarks: Mortality

LC 50 (Danio rerio (zebra fish)): 27.8 mg/l
Exposure time: 96 h
Method: Static
Remarks: Mortality

Toxicity to daphnia and other aquatic invertebrates : EC 50 (Water flea (Daphnia magna)): 4.24 - 10.7 mg/l
Exposure time: 48 h
Method: Static
Remarks: Intoxication

Persistence and degradability

Components:

DIMETHYL SUCCINATE:

Biodegradability : Remarks: Readily biodegradable

Bioaccumulative potential

Components:

DIMETHYL SUCCINATE:

Partition coefficient: n-octanol/water : log Pow: 0.35

DIMETHYL ADIPATE:

Partition coefficient: n-octanol/water : log Pow: 1.03

PHENOL:

Partition coefficient: n-octanol/water : log Pow: 1.46

DIISOBUTYL PHTHALATE:

Partition coefficient: n-octanol/water : log Pow: 4.11

Mobility in soil

No data available

Other adverse effects

Product:

Ozone-Depletion Potential	:	Regulation: 40 CFR Protection of Environment; Part 82 Protection of Stratospheric Ozone - CAA Section 602 Class I Substances Remarks: This product neither contains, nor was manufactured with a Class I or Class II ODS as defined by the U.S. Clean Air Act Section 602 (40 CFR 82, Subpt. A, App.A + B).

SECTION 13. DISPOSAL CONSIDERATIONS

Disposal methods

Waste from residues	:	Dispose of in accordance with all applicable local, state and federal regulations. Dispose of wastes in an approved waste disposal facility.

Material	:	769170

Manufacturer or supplier's details

Company	:	ASK Chemicals L.P.
Address	:	495 Metro Place South Suite 250 Dublin, OH 43017 United States of America
Emergency telephone number	:	1-855-ASK4YOU (1-855-275-4968)
E-mail address	:	EHSRequests.usa@ask-chemicals.com

SECTION 2. HAZARDS IDENTIFICATION

GHS Classification

Acute toxicity (Inhalation)	:	Category 4
Skin irritation	:	Category 2
Eye irritation	:	Category 2A
Respiratory sensitisation	:	Category 1
Skin sensitisation	:	Category 1

GHS Label element

Hazard pictograms :

Signal word : Danger

Hazard statements :
H315 Causes skin irritation.
H317 May cause an allergic skin reaction.
H319 Causes serious eye irritation.
H332 Harmful if inhaled.
H334 May cause allergy or asthma symptoms or breathing difficulties if inhaled.

Precautionary statements :
Prevention:
P261 Avoid breathing dust/ fume/ gas/ mist/ vapours/ spray.
P264 Wash skin thoroughly after handling.
P271 Use only outdoors or in a well-ventilated area.
P272 Contaminated work clothing should not be allowed out of the workplace.
P280 Wear eye protection/ face protection.
P280 Wear protective gloves.
P285 In case of inadequate ventilation wear respiratory protection.

Response:
P302 + P352 IF ON SKIN: Wash with plenty of soap and water.
P304 + P340 IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing.
P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P333 + P313 If skin irritation or rash occurs: Get medical advice/ attention.
P337 + P313 If eye irritation persists: Get medical advice/ attention.
P342 + P311 If experiencing respiratory symptoms: Call a POISON CENTER or doctor/ physician.
P362 Take off contaminated clothing and wash before reuse.
Disposal:
P501 Dispose of contents/ container to an approved waste disposal plant.

Other hazards

None known.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Hazardous components

Chemical Name	CAS-No.	Concentration (%)
POLYMETHYLENE POLYPHENYL ISOCYANATE	9016-87-9	>= 30 - < 50
4,4'-DIPHENYLMETHANE DIISOCYANATE	101-68-8	>= 30 - < 50
RAPESEED OIL FATTY ACIDS, METHYL ESTERS	73891-99-3	>= 20 - < 30
METHYLENE DIPHENYLISOCYANATE	26447-40-5	>= 1 - < 5

SECTION 4. FIRST AID MEASURES

General advice	:	Consult a physician.
If inhaled	:	Call a physician or poison control centre immediately. If breathed in, move person into fresh air.
In case of skin contact	:	Take off contaminated clothing and shoes immediately. If on skin, rinse well with water. If on clothes, remove clothes.
In case of eye contact	:	Remove contact lenses. Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes.
If swallowed	:	If swallowed, DO NOT induce vomiting unless directed to do so by medical personnel.
Most important symptoms and effects, both acute and delayed	:	None known.

SECTION 5. FIREFIGHTING MEASURES

Suitable extinguishing media	:	Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.
Specific hazards during firefighting	:	Do not use a solid water stream as it may scatter and spread fire. Burning produces irritant fumes. Cool closed containers exposed to fire with water spray.
Further information	:	In the event of fire and/or explosion do not breathe fumes.
Special protective equipment for firefighters	:	In the event of fire, wear self-contained breathing apparatus. Exposure to decomposition products may be a hazard to health.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures	:	Use personal protective equipment. Ensure adequate ventilation. Evacuate personnel to safe areas. Keep people away from and upwind of spill/leak. Use the indicated respiratory protection if the occupational exposure limit is exceeded and/or in case of product release (dust). Material can create slippery conditions.
Environmental precautions	:	Local authorities should be advised if significant spillages cannot be contained.
Methods and materials for containment and cleaning up	:	Keep in suitable, closed containers for disposal. Clean contaminated floors and objects thoroughly while observing environmental regulations.

SECTION 7. HANDLING AND STORAGE

Advice on safe handling	:	Avoid contact with skin and eyes. For personal protection see section 8. Smoking, eating and drinking should be prohibited in the application area. In case of insufficient ventilation, wear suitable respiratory equipment.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Components with workplace control parameters

Components	CAS-No.	Value type (Form of exposure)	Control parameters / Permissible concentration	Basis

4,4'-DIPHENYLMETHANE DIISOCYANATE	101-68-8	TWA	0.005 ppm	ACGIH

Information on likely routes of exposure
Inhalation
Skin Absorption

Acute toxicity

Product:

Acute inhalation toxicity	:	Acute toxicity estimate: 14.53 mg/l Exposure time: 4 h Test atmosphere: vapour Method: Calculation method

Components:

POLYMETHYLENE POLYPHENYL ISOCYANATE:

Acute oral toxicity	:	LD50 (rat): > 10,000 mg/kg
Acute inhalation toxicity	:	LC50 (rat): 0.369 - 0.49 mg/l Exposure time: 4 h

Acute dermal toxicity : LD50 (rabbit): > 10,000 mg/kg

LD50 (rabbit): 11,300 mg/kg

4,4'-DIPHENYLMETHANE DIISOCYANATE:
Acute oral toxicity : LD50 (rat): 9,200 mg/kg

Acute inhalation toxicity : LC50 (rat): > 2.24 mg/l
Exposure time: 1 h
Test atmosphere: dust/mist
Method: OECD Test Guideline 403

Acute dermal toxicity : LD50 (rabbit): > 7,900 mg/kg

RAPESEED OIL FATTY ACIDS, METHYL ESTERS:
Acute oral toxicity : LD50 (rat): > 2,000 mg/kg

METHYLENE DIPHENYLISOCYANATE:
Acute oral toxicity : LD50 (rat): > 15,800 mg/kg

Acute inhalation toxicity : LC50 (rat): 0.49 mg/l
Exposure time: 4 h

Acute dermal toxicity : LD50 (rabbit): > 5,010 mg/kg

Skin corrosion/irritation

Components:
POLYMETHYLENE POLYPHENYL ISOCYANATE:
Assessment: Irritating to skin.
Result: Irritating to skin.

4,4'-DIPHENYLMETHANE DIISOCYANATE:
Assessment: Irritating to skin.
Result: Irritating to skin.

RAPESEED OIL FATTY ACIDS, METHYL ESTERS:
Assessment: Mild skin irritation
Result: Mild skin irritation

METHYLENE DIPHENYLISOCYANATE:
Assessment: Irritating to skin.
Result: Irritating to skin.

Serious eye damage/eye irritation

Components:
POLYMETHYLENE POLYPHENYL ISOCYANATE:
Result: Irritating to eyes.
Assessment: Irritating to eyes.

4,4'-DIPHENYLMETHANE DIISOCYANATE:
Result: Irritating to eyes.
Assessment: Irritating to eyes.

RAPESEED OIL FATTY ACIDS, METHYL ESTERS:
Result: No eye irritation
Assessment: No eye irritation

METHYLENE DIPHENYLISOCYANATE:
Result: Irritating to eyes.
Assessment: Irritating to eyes.

Respiratory or skin sensitisation

Components:
POLYMETHYLENE POLYPHENYL ISOCYANATE:
Assessment: May cause sensitisation by skin contact.

Assessment: May cause sensitisation by inhalation.

4,4'-DIPHENYLMETHANE DIISOCYANATE:
Assessment: May cause sensitisation by inhalation.

Assessment: May cause sensitisation by skin contact.

METHYLENE DIPHENYLISOCYANATE:
Assessment: May cause sensitisation by inhalation.

Assessment: May cause sensitisation by skin contact.

Carcinogenicity

IARC	No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.
OSHA	No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.
NTP	No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

Further information

Components:
4,4'-DIPHENYLMETHANE DIISOCYANATE:
Remarks: Lungs

SECTION 12. ECOLOGICAL INFORMATION

Ecotoxicity
No data available

Persistence and degradability
No data available

Bioaccumulative potential
No data available

Mobility in soil
No data available

Other adverse effects

Product:

Ozone-Depletion Potential	:	Regulation: 40 CFR Protection of Environment; Part 82 Protection of Stratospheric Ozone - CAA Section 602 Class I Substances Remarks: This product neither contains, nor was manufactured with a Class I or Class II ODS as defined by the U.S. Clean Air Act Section 602 (40 CFR 82, Subpt. A, App.A + B).

SECTION 13. DISPOSAL CONSIDERATIONS

Disposal methods

Waste from residues	:	Dispose of in accordance with all applicable local, state and federal regulations. Dispose of wastes in an approved waste disposal facility.

SECTION 14. TRANSPORT INFORMATION

REGULATION
U.S. DOT - ROAD

4 = Extreme, * = Chronic

The information accumulated herein is believed to be accurate but is not warranted to be whether originating with the company or not. Recipients are advised to confirm in advance of need that the information is current, applicable, and suitable to their circumstances. This SDS has been prepared by ASK's Environmental Health and Safety Department-- EHSrequests.USA@ask-chemicals.com.

Revision Date : 05/26/2015

SECTION 1. IDENTIFICATION

Product name	:	ISOCURE™ 706 CATALYST
Material	:	590163

Manufacturer or supplier's details

Company	:	ASK Chemicals L.P.
Address	:	495 Metro Place South Suite 250 Dublin, OH 43017 United States of America
Emergency telephone number	:	1-855-ASK4YOU (1-855-275-4968)
E-mail address	:	EHSRequests.usa@ask-chemicals.com

SECTION 2. HAZARDS IDENTIFICATION

GHS Classification

Flammable liquids	:	Category 2
Acute toxicity (Oral)	:	Category 4
Skin irritation	:	Category 2
Serious eye damage	:	Category 1

GHS label elements

Hazard pictograms :

Signal word : Danger

Hazard statements : H225 Highly flammable liquid and vapour.
H302 Harmful if swallowed.
H315 Causes skin irritation.
H318 Causes serious eye damage.

Precautionary statements : **Prevention:**
P210 Keep away from heat/sparks/open flames/hot surfaces. - No smoking.
P233 Keep container tightly closed.
P240 Ground/bond container and receiving equipment.
P241 Use explosion-proof electrical/ ventilating/ lighting/ equipment.
P242 Use only non-sparking tools.
P243 Take precautionary measures against static discharge.
P264 Wash skin thoroughly after handling.
P270 Do not eat, drink or smoke when using this product.
P280 Wear protective gloves/ eye protection/ face protection.
Response:
P301 + P312 IF SWALLOWED: Call a POISON CENTER or doctor/ physician if you feel unwell.

P303 + P361 + P353 IF ON SKIN (or hair): Remove/ Take off immediately all contaminated clothing. Rinse skin with water/ shower.
P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P310 Immediately call a POISON CENTER or doctor/ physician.
P330 Rinse mouth.
P332 + P313 If skin irritation occurs: Get medical advice/ attention.
P362 Take off contaminated clothing and wash before reuse.
P370 + P378 In case of fire: Use dry sand, dry chemical or alcohol-resistant foam for extinction.
Storage:
P403 + P235 Store in a well-ventilated place. Keep cool.
Disposal:
P501 Dispose of contents/ container to an approved waste disposal plant.

Other hazards

None known.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Substance / Mixture : Substance

Hazardous components

Chemical name	CAS-No.	Concentration (%)
DIMETHYLPROPYLAMINE	926-63-6	>= 90 - <= 100

SECTION 4. FIRST AID MEASURES

General advice : Do not leave the victim unattended.

If inhaled : Remove person to fresh air. If signs/symptoms continue, get medical attention.

If unconscious place in recovery position and seek medical advice.
If symptoms persist, call a physician.

In case of skin contact : Flush skin with large amounts of water. If irritation develops and persists, get medical attention.

In case of eye contact : Remove contact lenses.
Protect unharmed eye.
If eye irritation persists, consult a specialist.

If swallowed : If swallowed, DO NOT induce vomiting unless directed to do so by medical personnel.

Keep respiratory tract clear.
Do not give milk or alcoholic beverages.
Never give anything by mouth to an unconscious person.

If symptoms persist, call a physician.

Most important symptoms and effects, both acute and delayed	:	None known.

SECTION 5. FIREFIGHTING MEASURES

Suitable extinguishing media	:	Carbon dioxide (CO2) Alcohol-resistant foam Water spray Dry chemical
Further information	:	Standard procedure for chemical fires. Use extinguishing measures that are appropriate to local circumstances and the surrounding environment.
Special protective equipment for firefighters	:	Wear self contained breathing apparatus for fire fighting if necessary.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Methods and materials for containment and cleaning up	:	Neutralise with acid. Wipe up with absorbent material (e.g. cloth, fleece). Keep in suitable, closed containers for disposal.

SECTION 7. HANDLING AND STORAGE

Advice on protection against fire and explosion	:	Normal measures for preventive fire protection.
Advice on safe handling	:	For personal protection see section 8. Smoking, eating and drinking should be prohibited in the application area.
Conditions for safe storage	:	Electrical installations / working materials must comply with the technological safety standards.
Materials to avoid	:	No materials to be especially mentioned.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Components with workplace control parameters

Contains no substances with occupational exposure limit values.

Personal protective equipment

Respiratory protection	:	No personal respiratory protective equipment normally required.
Eye protection	:	Safety glasses

Skin and body protection	:	Protective suit
Hygiene measures	:	General industrial hygiene practice.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance	:	liquid
Colour	:	colourless
Odour	:	amine-like
Odour Threshold	:	no data available
pH	:	ca. 11.2, 5 % (20 °C)
Melting point	:	ca. -40 °C
Boiling point	:	66.3 °C
Flash point	:	-11 °C Method: Closed Cup
Evaporation rate	:	no data available
Flammability (solid, gas)	:	no data available
Burning rate	:	no data available
Upper explosion limit	:	no data available
Lower explosion limit	:	no data available
Vapour pressure	:	172 mmHg (25 °C) Method: OECD Test Guideline 104
Relative vapour density	:	> 1 (Air = 1.0)
Relative density	:	0.702 (25 °C)
Density	:	0.702 g/cm3 (25 °C)
Bulk density	:	no data available
Solubility(ies)		
Water solubility	:	soluble
Solubility in other solvents	:	no data available
Partition coefficient: n-octanol/water	:	no data available

Auto-ignition temperature	:	165 °C
Decomposition temperature	:	no data available
Viscosity		
Viscosity, dynamic	:	0.36 mPa.s (20 °C)
Viscosity, kinematic	:	no data available
Molecular weight	:	87.16 g/mol

SECTION 10. STABILITY AND REACTIVITY

Reactivity	:	No decomposition if stored and applied as directed.
Chemical stability	:	Stable
Possibility of hazardous reactions	:	Stable under recommended storage conditions.
Conditions to avoid	:	no data available
Incompatible materials	:	Acids

SECTION 11. TOXICOLOGICAL INFORMATION

Acute toxicity

Product:

Acute oral toxicity : LD 50 (Rat): 507 mg/kg

Components:

DIMETHYLPROPYLAMINE:

Acute oral toxicity : LD50 (rat): 507 mg/kg

Acute dermal toxicity : LD 50 (Rabbit): 650 mg/kg

Skin corrosion/irritation

Product:

Assessment: Irritating to skin
Result: Irritating to skin

Components:

DIMETHYLPROPYLAMINE:

Assessment: Irritating to skin.
Result: Irritating to skin.

Serious eye damage/eye irritation

Product:

Result: Severely irritating to eyes
Assessment: Severely irritating to eyes

Components:

DIMETHYLPROPYLAMINE:
Result: Risk of serious damage to eyes.
Assessment: Risk of serious damage to eyes.

Germ cell mutagenicity

Components:

DIMETHYLPROPYLAMINE:

Genotoxicity in vitro	:	Method: Mutagenicity (Escherichia coli - reverse mutation assay) Result: negative

Carcinogenicity

IARC	No component of this product present at levels greater than or equal to 0.1% is identified as probable, possible or confirmed human carcinogen by IARC.
OSHA	No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.
NTP	No component of this product present at levels greater than or equal to 0.1% is identified as a known or anticipated carcinogen by NTP.

Further information

Product:

Remarks: no data available

SECTION 12. ECOLOGICAL INFORMATION

Ecotoxicity

Components:

DIMETHYLPROPYLAMINE:

Toxicity to fish	:	LC 50 (Brachydanio rerio): > 100 mg/l

Persistence and degradability

No data available

Bioaccumulative potential

No data available

Mobility in soil

No data available

Other adverse effects

Product:

Ozone-Depletion Potential	:	Regulation: 40 CFR Protection of Environment; Part 82 Protection of Stratospheric Ozone - CAA Section 602 Class I Substances Remarks: This product neither contains, nor was manufactured with a Class I or Class II ODS as defined by the U.S. Clean Air Act Section 602 (40 CFR 82, Subpt. A, App.A + B).
Additional ecological information	:	no data available

SECTION 13. DISPOSAL CONSIDERATIONS

Disposal methods

Waste from residues	:	Dispose of in accordance with all applicable local, state and federal regulations.
Contaminated packaging	:	Empty containers should be taken to an approved waste handling site for recycling or disposal.

SECTION 14. TRANSPORT INFORMATION

REGULATION
U.S. DOT - ROAD

UN/ID/NA number	:	UN2266
Proper shipping name	:	Dimethyl-N-propylamine
Class	:	3
Subsidiary risk	:	(8)
Packing group	:	II

1. Identification

Product identifier

ACMOS 118-63

Recommended use of the chemical and restrictions on use

Relevant identified uses

Release agent for cold setting sand

Uses advised against

Consumer uses: Private households (= general public = consumers)
Sector of uses [SU]: 21
Do not use for private purposes (household).

Relevant identified uses - Further information:
Industrial uses: Uses of substances as such or in preparations at industrial sites
Sector of uses [SU]: 3
The product is intended for professional use.

Details of the supplier of the safety data sheet

Manufacturer

Company name:	ACMOS CHEMIE KG
Street:	Industriestrasse 49
Place:	D-28199 Bremen
Post-office box:	10 10 69 D-28010 Bremen
Telephone:	+49 (0)421-5189-0 Telefax: +49 (0)421-511415
e-mail:	acmos@acmos.com
Contact person:	Mr. Stephan Dryhaus

2. Hazard(s) identification

Classification of the chemical

29 CFR Part 1910.1200

Flammable liquids: Flam. Liq. 2
Aspiration hazard: Asp. Tox. 1
Skin corrosion/irritation: Skin Irrit. 2
Specific target organ toxicity single exposure: STOT SE 3 (narcotic effects)

Label elements

29 CFR Part 1910.1200

Signal word: Danger

Pictograms:

Hazard statements

Highly flammable liquid and vapor
Causes skin irritation
May cause drowsiness or dizziness
May be fatal if swallowed and enters airways

Precautionary statements

Keep away from heat/sparks/open flames/hot surfaces. - No smoking.
Keep container tightly closed.
Ground/bond container and receiving equipment.
Use explosion-proof electrical/ventilating/lighting equipment.
Use only non-sparking tools.
Take precautionary measures against static discharge.
Avoid breathing spray.
Wash hands thoroughly after handling.
Use only outdoors or in a well-ventilated area.
Wear protective gloves/protective clothing/eye protection.
If swallowed: Immediately call a poison center/doctor.
Do NOT induce vomiting.
If on skin: Wash with plenty of soap and water.
If on skin (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower.
If skin irritation occurs: Get medical advice/attention.
Take off contaminated clothing and wash it before reuse.
If inhaled: Remove person to fresh air and keep comfortable for breathing.
Call a poison center/doctor if you feel unwell.
In case of fire: Use Water mist/Extinguishing powder/Foam/Carbon dioxide (CO2) to extinguish.
Keep container tightly closed.
Store in a well-ventilated place. Keep cool.
Store locked up.
Dispose of contents/container to Disposal of contents/container in accordance with local/regional/national/international regulations..

Additional advice on labelling

Labeling according to the revised Hazard Communication Standard (HCS 2012) according to 29 CFR 1910.1200(f)

Hazards not otherwise classified

Adverse physicochemical effects:
See section 9 for physical and chemical properties.
The vapors are heavier than air and can accumulate in high concentrations on the ground, in cavities, channels and cellars.
The accumulation in lowlying or closed rooms can cause increased danger of fire and explosion.
Vapors can travel considerable distances to a source of ignition where they can ignite, flash back, or explode.
Vapors of flammable solvents can accumulate in the gas phase of closed container, especially during heat treatment.
Therefore keep away from fire and sources of ignition.
This material can be ignited by heat, sparks, flames, or other sources of ignition (e.g., static electricity, pilot lights, mechanical/electrical equipment, and electronic devices such as cell phones, computers, calculators, and pagers which have not been certified as intrinsically safe).
This material can accumulate static charge by flow or agitation and can be ignited by static discharge.
The product will be applied by spraying.
In use, may form flammable/explosive vapor-air mixture.
Until complete evaporation of flammable components explosive vapor-air mixtures may form, even after use.

Adverse human health effects and symptoms:
See section 11 for toxicological information.
Inhalation of aerosol mists can cause damage to health.

Adverse environmental effects:
See section 12 for environmental information.

Other adverse effects:
Special danger of slipping by leaking/spilling product.

Results of PBT-/vPvB-assesment:
See under section 12.5 - Results of PBT and vPvB assessment.

3. Composition/information on ingredients

Mixtures

Chemical characterization

Solution of silicones in a mixture of solvents

Hazardous components

CAS No	Components	Quantity
64742-49-0	hydrocarbons, C7, n-alkanes, isoalkanes, cyclics	84 %

4. First-aid measures

Description of first aid measures

General information

Remove affected person from the danger area and lay down.
Take off immediately all contaminated clothing and wash it before reuse.
Put victim at rest, cover with a blanket and keep warm.
Do not leave affected person unattended.
If a person vomits when lying on his back, place him in the recovery position.
If breathing is irregular or stopped, administer artificial respiration.
If unconscious but breathing normally, place in recovery position and seek medical advice.
Never give anything by mouth to an unconscious person or a person with cramps.
In the event of cardiac arrest immediately perform cardiopulmonary resuscitation.
In case of accident or unwellness, seek medical advice immediately (show directions for use or safety data sheet if possible).

Self-protection of the first aider:
Wear personal protection equipment (refer to section 8).
First Aid.

Notes for the doctor:
Aspiration hazard
Risk of product entering the lungs on vomiting after ingestion.
Aspiration may cause pulmonary oedema and pneumonitis.
Symptoms may develop several hours following exposure; medical observation therefore necessary for at least 48 hours.

After inhalation

Remove victim out of the danger area.
Provide fresh air.
In the case of lung irritation: Primary treatment using corticoide spray, eg. Auxiloson spray, Pulmicort-dosage-spray. (Auxiloson and Pulmicort are registered trademarks.) Call a physician immediately.
Consult a doctor immediately in the case of inhaling spray mist and show him packing or label.

After contact with skin

Wash immediately with:
Water and soap
Rub greasy ointment into the skin.
Do not wash with:
Solvents/Thinner
In case of skin irritation, consult a physician.

After contact with eyes

In case of contact with eyes flush immediately with plenty of flowing water for 10 to 15 minutes holding eyelids apart and consult an ophthalmologist.
Remove contact lenses, if present and easy to do. Continue rinsing.
If present: Initial treatment with Previn. (Previn is a registered trademark).
Protect uninjured eye.

After ingestion

Do NOT induce vomiting.
Give nothing to eat or drink.
Observe risk of aspiration if vomiting occurs.
Never give anything by mouth to an unconscious person or a person with cramps.
Call a physician immediately.

Most important symptoms and effects, both acute and delayed

The following symptoms may occur:
Cough
Dyspnoea
Cyanosis (blue coloration of the blood)

Pulmonary oedema
Pneumonia
Acidosis
Depression of central nervous system
Headache
Nausea
Dizziness
Dizziness
Inebriation
Unconsciousness

Indication of any immediate medical attention and special treatment needed

Treat symptomatically.
In case of ingestion, the stomach should be emptied by gastric lavage under qualified medical supervision.
Regulation of the blood circulation, possible shock treatment.
Where appropriate artificial ventilation.
Subsequent observance for pneumonia and lung oedema.

5. Fire-fighting measures

Extinguishing media

Suitable extinguishing media

Water mist
Extinguishing powder (ABC-powder)
Foam
Carbon dioxide (CO_2)

Fire class (DIN EN 2): B (Fires of liquids or liquid turning substances).

Unsuitable extinguishing media

Full water jet
Water spray jet

Specific hazards arising from the chemical

In principle, fire gasses of organic materials have to be classified as toxic to the respiratory system.
Burning produces heavy smoke.

Hazardous combustion products:
Carbon monoxide
carbon dioxide (CO_2)
Hydrocarbons
Pyrolysis products, toxic

Special protective equipment and precautions for fire-fighters

Usual measures of preventive and averting fire protection.
Co-ordinate fire-fighting measures to the fire surroundings.
Do not inhale explosion and combustion gases.
Move to fresh air in case of accidental inhalation of fumes from overheating or combustion.
Beware of reignition.
Use caution when applying carbon dioxide in confined spaces. Carbon dioxide can displace oxygen.
Move undamaged containers from immediate hazard area if it can be done safely.
Stop and contain spill/release if it can be done safely. If this cannot be done, allow fire to burn under control.
Use water spray/stream to protect personnel and to cool endangered containers.
Collect contaminated fire extinguishing water separately. Do not allow entering drains or surface water.
Fire residues and contaminated fire extinguishing water must be disposed of in accordance with local regulations.

Protective equipment and precautions for firefighters
Wear a self-contained breathing apparatus and chemical protective clothing.
DIN-/EN-Norms EN 469
Firefighting protective clothing.

6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

General advice

Avoid contact with skin, eyes and clothes.
Do not breathe vapor or spray.
Remove all sources of ignition.
Prevent further leakage or spillage if safe to do so.

Remove persons to safety.
Be aware that gases can spread at ground level (heavier than air) and pay attention to the wind direction.
Provide adequate ventilation.
Special danger of slipping by leaking/spilling product.

For non-emergency personnel:
Use personal protection equipment.
Walk out of the danger zone and notify trained personnel.
Emergency procedures:
Keep the factory emergency plan and the information chain.

For emergency responders:
Use personal protection equipment.
The personal protective equipment must be adapted to the situation.
Suitable material:
See under section 8.2 - Personal protection equipment (PPE).

Environmental precautions

Do not allow to enter into surface water or drains.
Do not allow to enter into soil/subsoil.
Ensure waste is collected and contained.
Supress gases/vapors/mists with water spray jet.
In case of gas escape or of entry into waterways, soil or drains, inform the responsible authorities.

Methods and material for containment and cleaning up

Other information

For containment:
Repair leaks if without risk.
Move containers from spill area.
Make sure spills can be contained, e.g. in sump pallets or kerbed areas.
Prevent spread over a wide area (e.g. by containment or oil barriers).
Remove from the water surface (e.g. skimming, sucking).
Cover drains.

For cleaning up:
Clean-up methods - large spillage:
Absorb with liquid-binding material (sand, diatomaceous earth, acid- or universal binding agents).
Shovel into suitable container for disposal.
Local authorities should be advised if significant spillages cannot be contained.
Clean-up methods - small spillage:
Clear spills immediately.
Wipe up with absorbent material (eg. cloth, fleece).
Collect in closed and suitable containers for disposal.
Clear contaminated areas thoroughly.
Recommended cleansing agent:
Clean with detergents. Avoid solvent cleaners.
Retain contaminated washing water and dispose it.
Ensure all waste water is collected and treated via a waste water treatment plant.
Ventilate affected area.

Suitable material for taking up:
Sand
Kieselguhr
Universal binder
Absorbing material, organic

Unsuitable material for taking up:
None known

Reference to other sections

Personal protection equipment (PPE): see section 8
Disposal: see section 13

7. Handling and storage

Precautions for safe handling

Advice on safe handling

Measures to prevent aerosol and dust generation:
All work processes must always be designed so that the following is as low as possible:
Inhalation of vapors or spray/mists
Eye contact
Skin contact

Technical ventilation of workplace
Vapors are heavier than air.
Provide room air exhaust at ground level.
During filling, metering and sampling should be used if possible:
Splashproof grounded devices
Devices with local exhaust
Use only in a exhaust booth with integrated air filter.
Use in ventilated spray booths only.
Recirculation of exhaust air is not recommended.
Always close containers tightly after the removal of product.

Advice on protection against fire and explosion

Measures to prevent fire:
The product is: Highly flammable.
The formation of combustible vapors is possible, at temperatures above: -27 °C (Flash point - 15 °C)
Vapors may form explosive mixtures with air.
Spray mist may be flammable at temperatures below the flash point.
Reignition possible over considerable distance.
Vapors are heavier than air, spread along floors and form explosive mixtures with air.
Due to danger of explosion, prevent leakage of vapors into cellars, flues and ditches.
Provide earthing of containers, equipment, pumps and ventilation facilities.
Use explosion-proof machinery, apparatus, ventilation facilities, tools etc.
Use only non-sparking tools.
Take precautionary measures against static discharges.
Flammable vapors can accumulate in steam space of closed systems.
Only use the material in places where open light, fire and other flammable sources can be kept away.
Keep away from sources of heat (e.g. hot surfaces), sparks and open flames.
Usual measures for fire prevention.
Fire-fighting equipment on the basis of class B.
Never use pressure to empty container.
Wear anti-static footwear and clothing

Measures according to German "Explosion rules" required:
Prevention measures regarding formation of explosible atmosphere (restriction and supervision of concentration, inertisation, airtightness, ventilation, warning device, etc.).
Prevention measures regarding ignition of explosible atmosphere (zone graduation, removing of ignition sources, explosion-proof electrical installation, earthing, etc.).
Constructive measures for restriction of effects regarding explosions (resistance to pressure of explosions, discharge of pressure of explosions, suppression of explosions, etc.).

Further information on handling

Environmental precautions:
Shafts and sewers must be protected from entry of the product.
Transfer wash-downs in sealed containers.
Provide for retaining containers, e.g. floor pan without outflow.
For restriction of emission on volatile organic compounds (VOC) the solvent vapours should be supplied to exhaust air purification facilities (filter, gas washer, incineration).

Advices on general occupational hygiene:
Wear personal protection equipment (refer to section 8).
Minimum standard for preventive measures while handling with working materials are specified in the TRGS 500.
General industrial hygiene practice.
Handle in accordance with good industrial hygiene and safety practice.
Working places should be designed to allow cleaning at any time.
Floors, walls and other surfaces in the hazard area must be cleaned regularly.
Clean spray booth and exhaust hood completely with every product change.
When using do not eat, drink, smoke, sniff.
Thorough skin-cleansing after handling the product.
Used working clothes should not be worn outside the work area.

Conditions for safe storage, including any incompatibilities

Requirements for storage rooms and vessels

Suitable floor material:
Floors should be impervious, resistant to liquids and easy to clean.

Protect against:
Heat
Cold

Recommended storage temperature: +10 ... +30 °C

Keep away from:
Food and feedingstuffs

Packaging materials:
Suitable container/equipment material:
Keep/Store only in original container.
Unsuitable container/equipment material:
See under section 8.2 - Hand protection.

Hints on joint storage

Do not store together with:
Storage class:
1 (Explosive hazardous substances)
2 A (Gases (except aerosol dispensers and lighters))
4.1 A (Other potentially explosive hazardous substances)
4.1 B (flammable solids)
4.2 (Pyrophoric or self-heating substances)
4.3 (Hazardous substances that release flammable gases when in contact with water)
5.1 A (Highly oxidising substances)
5.1 C (Ammonium nitrate and preparations containing ammonium nitrate)
5.2 (Organic peroxides and self-reactive substances)
6.1 B (Non-combustible substances of acute toxicity, category 1 and 2 / very toxic substances)
6.2 (Infectious substances)
7 (Radioactive substances)

Further information on storage conditions

Technical measures and storage conditions:
The valid water and zoning ordinances must be observed.
Heating causes rise in pressure with risk of bursting.
Keep away from sources of ignition - No smoking.
Keep in a cool, well-ventilated place.
Keep container tightly closed.
Protect containers against damage.
Ensure adequate ventilation of the storage area.
Store small packages in a suitable, robust cabinet.
Do not store outside.
See also instuctions on the label.

8. Exposure controls/personal protection

Control parameters

Exposure limits

CAS No.	Substance	ppm	mg/m³	f/cc	Category	Origin
142-82-5	Heptane (n-Heptane)	500	2000		TWA (8 h)	PEL
-	Heptane, all isomers	400			TWA (8 h)	ACGIH-2021
		500			STEL (15 min)	ACGIH-2021
142-82-5	n-Heptane	85	350		TWA (8 h)	REL
		C 440	C 1800		Ceiling	REL
110-54-3	n-Hexane	500	1800		TWA (8 h)	PEL
		50	180		TWA (8 h)	REL
		50			TWA (8 h)	ACGIH-2021

Biological Exposure Indices (BEI-ACGIH)

CAS No.	Substance	Determinant	Value	Test material	Sampling time
110-54-3	n-HEXANE	2,5-Hexanedion (without hydrolysis)	0.5 mg/L	urine	End of shift

Additional advice on limit values

Country information (EU)
(http://www.dguv.de/ifa/fachinfos/occupational-exposure-limit-values/foreign-and-eu-limit-values/index.jsp)
Country information (USA) (https://www.osha.gov/pls/oshaweb/owadisp.show_document?p_table=STANDARDS&p_id=9992&p_text_version=FALSE)
National Institute for Occupational Safety and Health - NIOSH (http://cdc.gov/niosh/pel88/pelstart.html) / Occupational Safety and Health Administration - Department of Labour (http://osha.gov/pls/oshaweb/owasrch.search_form?p_doc_type=SATNDARSp_toc_level=0)
Source of law:

Recommended monitoring procedures:
Workplace atmospheres - Guide for the application and use of procedures for the assessment of exposure to chemical and biological agents (BS EN 14042):
Personal air monitoring
Room air monitoring
Test tube
Gas warning system
Biological monitoring

Preliminary concentration measurements:
Suitable detector tubes for measuring the current concentration in the air at the workplace: DRÄGER test tubes - short-term tubes (http://www.gasmesstechnik.de)
DRÄGER test tubes - Short-term tubes - Petroleum hydrocarbons 10/a (n-octane, measuring range: 10 - 300 ppm, response time: 60 sec) (http://www.gasmesstechnik.de)
DRÄGER test tubes - Short-term tubes - Petroleum hydrocarbons 100/a (n-octane, measuring range: 100 - 2500 ppm, response time: 30 sec) (http://www.gasmesstechnik.de)

Preventive industrial medical examinations are to be offered.
See under section 15.1 - National regulations.

Exposure limits at intended use:

DNEL-/PNEC-values:

Risk management measures according to used control banding approach:
Control banding for chemicals according to the ILO CHEMICAL CONTROL TOOLKIT (ICCT): ICCT-Guidelines and Control Guidance Sheets (http://www.ilo.org/legacy/english/protection/safework/ctrl_banding/toolkit/main_guide.pdf)

Used model:
Consider appropriate model solutions according to good engineering practices while designing the work process if available.

Exposure controls

Appropriate engineering controls

Substance/mixture related measures to prevent exposure during identified uses:
Technical measures to prevent exposure:
Design of appropriate work processes and engineering controls and the use of adequate materials (closed systems with gas-displacement, physical cut-off of man and machine, model solutions as certified working methods, working appliance according to the state of the art, optimisation of process / spray robots, working appliance for prevention of skin contact, models of working times).

Organisational measures to prevent exposure:
Execution of collective protection measures at source and appropriate organisational measures (local exhaust ventilation, ventilation by technical means, general ventilation, measures on averting a danger at breakdowns / at emergencies / after accidents, first aid measures, manner related measures: operating instruction / instruction of employees, occupational medicine health precaution).

Structural measures to prevent exposure:
Execution of individual and personnel protection measures (personal protective equipment - PPE).

If technical exhaust or ventilation measures are not possible or insufficient, respiratory protection must be worn. Technical measures and the application of suitable work processes have priority over personal protection equipment.

References for design of technical equipment:
See under section 7.1 - Precautions for safe handling.

Summary of the risk management measures for exposure scenario:
Use only the following product amount per time unit:
No information available.
Minimum room-width and room-height for handling/application:
No information available.
Minimum room ventilation rate for handling/application (air changes per hour):
No information available.

Individual protection measures, such as personal protective equipment

Eye/face protection

If required according to hazard assessment:
Suitable eye protection:
Eye glasses with side protection (EN 166)
Recommended eye protection articles:
UVEX I-VO / UVEX I-3 / UVEX SUPER OTG
Or comparable articles from other companies.

Hand protection

Skin protection:
Preventive skin protection.:
Draw up skin protection programme.
Before starting work, apply solvent-resistant skincare preparations.
e.g. sansibal® / sansibon®, dualin® (PETER GREVEN PHYSIODERM)
Wash hands before breaks and after work.
e.g. ecosan®, topscrub® soft / topscrub® extra / topscrub® nature (PETER GREVEN PHYSIODERM)
After cleaning apply high-fat content skin care cream.
e.g. physioderm® creme, cura soft® / cUrea soft (PETER GREVEN PHYSIODERM)
Apply skin care products after work.

If required according to hazard assessment:
When handling with chemical substances, protective gloves should be worn.
The quality of the protective gloves resistant to chemicals must be chosen as a function of the specific working place concentration and quantity of hazardous substances.
Decrease wearing protection gloves to an inevitable degree to avoid skin rash.
Technical and organizational protective actions have to be preferred.
Breakthrough times and swelling properties of the material must be taken into consideration.
Check leak tightness/impermeability prior to use.
Wear cotton undermitten if possible.
Change preventive gloves once by hour or use special skin-protective preparations for protective gloves carrier,
e.g. physioderm® proGlove (PETER GREVEN PHYSIODERM)
Take recovery periods for skin regeneration.
Do not wear gloves near rotary machines and tools.
Dispose preventive gloves after defect or expiry of wearing time. Replace when worn.
In the case of wanting to use the gloves again, clean them before taking off and air them well.

Wearing time with permanent contact:
Suitable gloves type
Gloves with long cuffs
Recommended glove articles:
Suitable materials at long term, direct contact (Recommended: Preventive index 6, accordingly > 480 min. permeation

time):
Nitrile rubber / NBR (KCL-CAMATRIL VELOURS® - Art. No. 730) - Layer thickness: 0,4 mm
Fluorine rubber / FKM / Viton (KCL-VITOJECT® - Art. No. 890) - Layer thickness: 0,7 mm
Or comparable articles from other companies.

Unsuitable material:
Butyl caoutchouc (butyl rubber)
NR (natural rubber, natural latex)

Wearing time with occasional contact (splashes):
Suitable gloves type
Disposable gloves
Recommended glove articles:
Suitable materials at short term contact or splash (Recommended: Preventive index 3, accordingly > 60 min. permeation time):
Disposable gloves of special nitrile rubber / NBR (KCL-DERMATRIL® P - Art. No. 743) - Layer thickness: 0,2 mm
Or comparable articles from other companies.

The statements are based on self-tests, literary reference and information of glove manufacturers or have been derived from similar substances by analogy.
Source: CHEMIKALIEN-MANAGER - KCL-software for hand protection.
It has to be noticed, that daily time of use of chemical protective gloves may be quite shorter in practice because of many factors of influence (e.g. thermal and mechanical stress as well as special conditions on the floor) than the permeation time determined in accordance to EN 374.
The respective permeation time doubles/halvens at about 1,5 times larger/lower layer thickness.
Declared permeation times are not carried out under practical conditions. Therefore a maximum wearing time up to 50 % of breakthrough time is recommended.
They relate to the pure solvent as mean component.

Barrier creams are not substitutes for body protection.

Skin protection

Suitable protective clothing:
Overall, Natural fibres (e.g. cotton) (EN 340)
For the protection against direct skin contact, body protective clothing is essential (in addition to the usual working clothes).
When handling with chemical substances, protective clothing should be worn.
DIN-/EN-Norms DIN EN 468
Chemical protection clothing (Disposable suit antistatic)
type 6 limited splash-tight
type 5 particle-tight (method B)
type 4 spray-tight
Recommended protective clothing articles:
TYVEK CLASSIC PLUS (DU PONT)
Or comparable articles from other companies.

Chemical resistant safety shoes with conductible sole (EN ISO 20345)

Wash contaminated clothing prior to re-use.
Used working clothes should not be worn outside the work area.
Street clothing should be stored separately from work clothing.

Thermal hazards:
No thermal hazards during use of this product.

Respiratory protection

If required according to hazard assessment:
Respiratory protection necessary at:
aerosol or mist formation + exceeding exposure limit values +
high concentrations / prolonged exposure / insufficient ventilation / insufficient exhaust
Use only respiratory protection equipment with CE-symbol including four digit test number.
Filter types: A, B, E, K. Class 1: Maximum permitted contaminant concentration in inhaled air = 1000 mL/m3 (0.1 % by vol.); class 2: maximum permitted contaminant concentration in inhaled air = 5000 mL/m³ (0.5 % by vol.); class 3: maximum permitted contaminant concentration in inhaled air = 10000 mL/m³ (1.0 % by vol.)
The filter class must be suitable for the maximum contaminant concentration (gas/vapor/aerosol/particulates) that may

arise when handling the product. If the concentration is exceeded, self-contained breathing apparatus must be used. Observe the wear time limits according GefStoffV in combination with the rules for using respiratory protection apparatus (BGR 190).
The use of filter equipment requires a minimum oxygen content of 17 Vol-% in the surrounding atmosphere and that the maximum permitted gas concentration - normally 0,5 Vol-% - is not exceeded.

Suitable respiratory protection apparatus:
Half-face mask or quarter facepiece: maximum use concentration for substances with exposure limits: P1 filter: up to a max. of 4 times the exposure limit. P2 filter: up to a max. of 10 times the exposure limit. P3 filter: up to a max. of 30 times the expo.

Recommended respiratory protection articles:
Half mask or quarter mask with combination filter A1P1/A2P2 for gases, vapors and particles. (EN 140, EN 14387)
Filtering half mask or quarter mask with combination filter FFA1 P1/FFA2P2 for gases, vapors and particles. (EN 405)
Gas filtrating Half-face mask FFA (EN 405)
Model 4251 (FFA1P1 - 1000 ml/m3) / 4255 (FFA2P2SL - 5000 ml/m3) (3M)
Half-face mask or Quarter-face mask with gas filter (EN 140, EN 14387)
Filter type 6051 (A1 - 1000 ml/m3) / 6055 (A2 - 5000 ml/m3) (3M)
Full-face mask with gas filter (EN 136, EN 14387)
Gas filter type: A, Indication colour: brown
Or comparable articles from other companies.

Environmental exposure controls

Environmental exposure controls:
Technical measures to prevent exposure:
Discharge exhaust air only with suitable seperators to atmosphere.
Organisational measures to prevent exposure:
Should not be released into the environment.
Structural measures to prevent exposure:

Use the following recovery and/or abatement technique for cleaning waste gases:
Exhaust air scrubber
Adsorption
Incineration

Further information see under section 6.2 - Environmental precautions.

9. Physical and chemical properties

Information on basic physical and chemical properties

Physical state:	liquid
Color:	colorless
Odor:	characteristic

		Test method
Changes in the physical state		
Melting point/freezing point:	not determined	
Boiling point or initial boiling point and boiling range:	> 90 °C	literature value
Sublimation point:	not applicable	
Softening point:	not applicable	
Pour point:	not applicable	
Flash point:	-12 °C	EN ISO 13736
Flammability		
Solid/liquid:	not applicable (Liquid)	
Gas:	not applicable (Liquid)	

Explosive properties

In use, may form flammable/explosive vapor-air mixture.
The statements for steam pressure, ignition point and explosion levels apply to the solvent / solvent mixture.

Lower explosion limits:	0,6 vol. %	literature value
Upper explosion limits:	8,0 vol. %	literature value
Auto-ignition temperature:	> 200 °C	literature value

Self-ignition temperature

Solid:	Not pyrophoric.	
Gas:	Not pyrophoric.	
Decomposition temperature:	not determined	

Oxidizing properties

not relevant

pH-Value:	not applicable	
Viscosity / dynamic:	not determined	
Viscosity / kinematic: (at 40 °C)	2,0 mm²/s	DIN 53015
Flow time: (at 23 °C)	25 s	3 DIN EN ISO 2431
Water solubility: (at 20 °C)	practically insoluble: < 0,1 g/L	literature value

Solubility in other solvents

miscible with most organic solvents

Partition coefficient n-octanol/water:	not applicable (Mixtures)	
Vapor pressure: (at 20 °C)	< 70 hPa	literature value
Vapor pressure: (at 50 °C)	< 235 hPa	literature value
Density (at 20 °C):	(6,175 lbs/gal) 0,74 g/cm³	DIN 51757
Bulk density:	not applicable (Liquid)	
Relative vapour density: (at 25 °C)	~ 3.2 (Air=1)	literature value

Other information

Other safety characteristics

Solvent separation test:	not applicable	
Solvent content:	not determined	
Solid content:	not determined	
Evaporation rate: (at 20 °C)	< 3.9 (n-Butyl acetate=1)	ASTM D 3539

Further Information

Temperature Class (DIN EN 60079-0): T 3 (T > +200 °C ... <= +300 °C)
Limiting oxygen concentration (LOC) (DIN EN 14756): No data available
Explosion group: IIA
Maximum experimental safe gap (MESG) (IEC 60079-1-1): > 0,9 mm
Minimum ignition current (MIC) (IEC 60079-11): No data available
Minimum ignition energy (MIE) (DIN EN 13673-1): No data available
Odor threshold: 900 ppm ((heptane; n-heptane), literature value)
Molecular weight: ~ 100 g/mol (calculated)

Data apply to the main component.

Conductivity (ASTM D 2624): > 1000 pS/m
Surface tension: No data available
Fat solubility: No data available
Calculated oxidation potential of the mixture (OP): not relevant

Substance group relevant properties:
Data relevant with regard to physical hazard classes (supplemental):
Explosives
not applicable
Flammable gases
Non-flammable. / not applicable (Liquid)
Aerosols
Non-flammable. / not applicable (Liquid)
Oxidising gas
Not oxidising. / not applicable (Liquid)
Gases under pressure
not applicable (Liquid)

Flammable liquids
Highly flammable
In use, may form flammable/explosive vapor-air mixture.
flammable solids
Non-flammable. / not applicable (Liquid)
Self-reactive substances and mixtures
not applicable
Pyrophoric liquids
Not pyrophoric.
Pyrophoric solids
Not pyrophoric. / not applicable (Liquid)
self-heating substances and mixtures
not applicable
Substances or mixtures which, in contact with water, emit flammable gases
not applicable
Oxidising liquids
Not oxidising.
Oxidising solids
Not oxidising. / not applicable (Liquid)
Organic peroxides
not applicable
Corrosive to metals.
Not corrosive to metals.

10. Stability and reactivity

Reactivity

The product is chemically stable under recommended conditions of storage, use and temperature.

Chemical stability

Stability: Stable

The product is chemically stable under recommended conditions of storage, use and temperature.

Possibility of hazardous reactions

Hazardous reactions: Will not occur

No hazardous reaction when handled and stored according to provisions.

Conditions to avoid

Heat, flames and sparks.
Further information see under section 7.2 - Conditions for safe storage, including any incompatibilities.
Further information see under section 10.5 - Incompatible materials.

Incompatible materials

Violent reaction with:
strong
Further information see under section 7.1 - Precautions for safe handling.

Hazardous decomposition products

Does not decompose when used for intended uses.
No known hazardous decomposition products.
Under fire conditions: See under section 5.2 - Specific hazards arising from the chemical.

11. Toxicological information

Information on toxicological effects

Route(s) of Entry

Inhalation: X
Skin: X
Ingestion: X

Toxicocinetics, metabolism and distribution

There are no data available on the preparation/mixture itself.
The product has not been tested.

Information on likely routes of exposure /
Symptoms related to the physical, chemical and toxicological characteristics:
See under section 4.2 - Most important symptoms/effects, acute and delayed.

Exposure route:
In case of ingestion:
Ingestion causes nausea, weakness and central nervous system effects.

Aspiration hazard
The risk of aspiration (penetration of liquids through the oral or nasal cavity into the trachea and lower respiratory system) is restricted solely to accidental ingestion (accident involvement) and not to the inhalation of fine mist (aerosols), as this does not result in juxtaposition of the particles, which could trigger a chemical pneumonia in the lungs.
According to the "qualitative exposure assessment" for as Asp. Tox 1, H304 classified substances and mixtures (without DNEL's) the risk management measures restricting the use of the safety P301+P310 and P331 in the SDS and on the label.

In case of skin contact:
irritant.
erythema (redness)
Prolonged or repeated skin contact may cause removal of natural fat from the skin resulting in dermatitis (skin inflammation).

In case of inhalation:
slightly irritant but not relevant for classification.
Narcotic effects
In animal experiments aerosol mists (from organic solutions / dispersions or aquatic emulsions) based on polymeric components of the mixture can cause damage to health if inhaled.

In case of eye contact:
slightly irritant but not relevant for classification.
Conjunctival redness.

Delayed and immediate effects as well as chronic effects from short and long-term exposure:
Inhalative specific target organ toxicity (single exposure)

Interactive effects:
Not relevant

Absence of specific data:
No data is available on the product itself. Description of possible hazardous to health effects is based on experience and/or toxicological characteristics of several components.
However, some datas are not complete regarding particular main components. Nevertheless according to the experience of the manufacturer there are no other hazards expected then those which are already mentioned on the label.

Mixture versus substance information:
Not relevant

Acute toxicity

Based on available data, the classification criteria are not met.

CAS No	Components				
	Exposure route	Dose	Species	Source	Method
64742-49-0	hydrocarbons, C7, n-alkanes, isoalkanes, cyclics				
	oral	LD50 > 5840 mg/kg	Rat	Supplier / ECHA	
	dermal	LD50 > 2800 mg/kg	Rat	Supplier / ECHA	
	inhalation (4 h) vapour	LC50 > 23,3 mg/l	Rat	Supplier / ECHA	OECD 403

Irritation and corrosivity

Causes skin irritation
Serious eye damage/eye irritation: Based on available data, the classification criteria are not met.

Sensitizing effects

Based on available data, the classification criteria are not met.

Carcinogenic/mutagenic/toxic effects for reproduction

Based on available data, the classification criteria are not met.

Specific target organ toxicity (STOT) - single exposure

May cause drowsiness or dizziness (hydrocarbons, C7, n-alkanes, isoalkanes, cyclics)

Specific target organ toxicity (STOT) - repeated exposure

Based on available data, the classification criteria are not met.

Aspiration hazard

May be fatal if swallowed and enters airways

12. Ecological information

Ecotoxicity

Aquatic toxicity:
Acute (short-term) fish toxicity:
There are no data available on the preparation/mixture itself. The product has not been tested.
Acute (short-term) toxicity to crustacea:
There are no data available on the preparation/mixture itself. The product has not been tested.
Acute (short-term) toxicity to algae and cyanobacteria:
There are no data available on the preparation/mixture itself. The product has not been tested.

Chronic (long-term) toxicity to aquatic invertebrate:
There are no data available on the preparation/mixture itself. The product has not been tested.
Chronic (long-term) fish toxicity:
There are no data available on the preparation/mixture itself. The product has not been tested.

Toxicity to other aquatic plants/organisms:
No data available (Substances/Ingredient)

Terrestrial toxicity:
Acute and subchronic bird toxicity:
No data available (Substances/Ingredient)
Bird reproduction toxicity:
No data available (Substances/Ingredient)
Acute earthworm toxicity:
No data available (Substances/Ingredient)
Chronical earthworm toxicity (reproduction):
No data available (Substances/Ingredient)
Useful insect toxicity:
No data available (Substances/Ingredient)
Acute plant toxicity:
No data available (Substances/Ingredient)
Chronic plant toxicity:
No data available (Substances/Ingredient)
Toxicity to soil macroorganisms except of arthropods:
No data available (Substances/Ingredient)
Effects on soil microorganisms:
No data available (Substances/Ingredient)

Behaviour in waste water treatment plants:
Due to its low solubility in water the product is almost completely mechanically separated in biological sewage plants.
Observe local regulations concerning effluent treatment.

CAS No	Components						
	Aquatic toxicity	Dose		[h] | [d]	Species	Source	Method
64742-49-0	hydrocarbons, C7, n-alkanes, isoalkanes, cyclics						
	Acute fish toxicity	LL50 mg/l	> 13,4	96 h	Oncorhynchus mykiss	Supplier / ECHA	OECD 203
	Acute algae toxicity	ErC50 mg/l	10-30	72 h	Pseudokirchneriella subcapitata	Supplier / ECHA	OECD 201
	Acute crustacea toxicity	EL50	3 mg/l	48 h	Daphnia magna	Supplier / ECHA	OECD 202
	Fish toxicity	NOEC mg/l	1,534	28 d	Oncorhynchus mykiss	Supplier / ECHA	[growth rate]
	Algae toxicity	NOEC	6,3 mg/l	4 d	Pseudokirchneriella subcapitata	Supplier / ECHA	OECD 201
	Crustacea toxicity	NOEC	0,17 mg/l	21 d	Daphnia magna	Supplier / ECHA	OECD 211
	Acute bacteria toxicity	(26,81 mg/l)		0 h	Tetrahymena pyriformis	ECHA	[48h] [growth]

Persistence and degradability

Abiotic degradation:
Physicochemical elimination:
Oxidation:
not applicable (Mixtures)

In air a rapid reduction is expected.
The information about ecology refers to the main components.

Hydrolysis:
not applicable (Mixtures)
It is not expected to conversion due to hydrolysis to any significant extent.
The information about ecology refers to the main components.

Photochemical elimination:
Photolysis:
not applicable (Mixtures)
It is not expected to conversion due to photolysis to any significant extent.
The information about ecology refers to the main components.

Ozonolysis:
not applicable (Mixtures)

Biodegradation:
not applicable (Mixtures)

Bioaccumulative potential

not applicable (Mixtures)

Mobility in soil

Surface tension:
See under section 9.1 - Information on basic physical and chemical properties.

Distribution:
Water-air (volatility rate, Henry-constant):
not applicable (Mixtures)
The product is insoluble and floats on water.
Product is easily volatile.
The information about ecology refers to the main components.

Soil-Water (Adsorption coefficient):
not applicable (Mixtures)
If product enters soil, it will be mobile and may contaminate groundwater.
The information about ecology refers to the main components.

Soil-Air (volatility rate):
not applicable (Mixtures)
Product is easily volatile.
The information about ecology refers to the main components.

This product contains one or more hydrocarbon UVCB's. Standard tests for this endpoint are intended for single substances and are not appropriate for this complex substance.

Other adverse effects

Ozone depletion potential (ODP):
No data available (Substances/Ingredient)

Photochemical ozone creation potential (POCP):
No data available (Substances/Ingredient)

Global warming potential (GWP):
No data available (Substances/Ingredient)

Endocrine disrupting potential
No data available

AOX: Product does not contain any organic halogens.

13. Disposal considerations

Waste treatment methods

Disposal recommendations

Waste treatment options:
Send to a hazardous waste incinerator facility under observation of official regulations.

Dispose of waste according to applicable legislation.
Waste disposal according to directive 2008/98/EC, covering waste and dangerous waste.
Properties of waste which render it hazardous:
Highly flammable
Irritant — skin irritation and eye damage
Specific Target Organ Toxicity (STOT)/Aspiration Toxicity

Evidence for disposal must be provided.
Consult the appropriate local waste disposal expert about waste disposal.
Waste for recycling is to be classified and labelled.
For recycling, contact recycling exchanges.
May not be disposed or deposited together with domestic garbage.
Do not mix with other wastes.
Do not flush into surface water or sanitary sewer system.
Do not dispose of waste into sewer.
Before discharge in public drains (e.g. residues of washing- and rinsing liquids) please observe the relevant regulations. In case of further questions please contact your waste- or environmental representative or the responsible authority.
Clean IBCs or drums at approved facility only.
The waste producer is resposible for correct coding and designation of his wastes.
The allocation of waste identity numbers/waste descriptions must be carried out according to the EEC, specific to the industry and process.
List of proposed waste codes/waste designations in accordance with EWC:

RCRA Hazardous wastes (Resource Conservation and Recovery Act)

D001 Ignitability

Contaminated packaging

Other disposal recommendations:
Contaminated packages must be completely emptied and can be re-used following proper cleaning.
Cleaning by recycling company.
Recommended cleansing agent:
Clean with detergents. Avoid solvent cleaners.

Handle contaminated packages in the same way as the substance itself.
Non-contaminated packages may be recycled.
Packing which cannot be properly cleaned must be disposed of.
As well uncleaned (empty) containers remain contaminated by product residues and may be hazardous by vapours. They have to be disposed by specialists or have to be supplied to a licensed reconditioning.
The conditions of the regional reconditioning companies have to be observed.

14. Transport information

US DOT 49 CFR 172.101

UN number or ID number:	UN1268
Proper shipping name:	PETROLEUM PRODUCTS, N.O.S.
Transport hazard class(es):	3
Packing group:	II
Hazard label:	3

Marine transport (IMDG)

UN number or ID number:	UN1268
UN proper shipping name:	PETROLEUM PRODUCTS, N.O.S. (Naphtha (Petroleum), hydrotreated, light)
Transport hazard class(es):	3
Packing group:	II
Hazard label:	3

Marine pollutant:	P
Special Provisions:	-
Limited quantity:	1 L
Excepted quantity:	E2
EmS:	F-E, S-E
Segregation group:	IMDG-Code segregation group not applicable

Other applicable information (marine transport)

Exception(s): Not applicable

Air transport (ICAO-TI/IATA-DGR)

UN number or ID number:	UN1268
UN proper shipping name:	PETROLEUM PRODUCTS, N.O.S.
Transport hazard class(es):	3
Packing group:	II
Hazard label:	3

Special Provisions:	A3
Limited quantity Passenger:	1 L
Passenger LQ:	Y341
Excepted quantity:	E2
IATA-packing instructions - Passenger:	353
IATA-max. quantity - Passenger:	5 L
IATA-packing instructions - Cargo:	364
IATA-max. quantity - Cargo:	60 L

Other applicable information (air transport)

ERG Kodex: 3H

The state variations in chapter 2.8.1 and the operator variations in chapter 2.8.3 for shipping of dangerous goods in limited quantities according to chapter 2.7 of the valid ICAO/IATA Dangerous Goods Regulations have to be observed.

The rulings for dangerous goods by air mail according to chapter 2.4 of the valid ICAO/IATA Dangerous Goods Regulations and the conventions of the Universal Postal Union (UPU) as well as the clauses of the relevant National Postal Administation have to be observed. Airmail: prohibited.

Environmental hazards

ENVIRONMENTALLY HAZARDOUS: Yes

Danger releasing substance: Naphtha (Petroleum), hydrotreated, light

Special precautions for user

Further information see under section 6, 7, 8.

Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code

No bulk transport in accordance with IBC code.
It is sold exclusively in traffic legally authorized and appropriate packaging.

Other applicable information

Postal, express and courier services:
Postal service (national):
Refer to your National Postal Administation.
Express freight / special delivery:
Refer to your National Postal Administation.
Courier service (national):
The general conditions of business of the particular courier service have to be observed.

15. Regulatory information

U.S. Regulations

National Inventory TSCA

All intentional used ingrendients of this product are listed in the TSCA-inventory or correspond to TSCA-exceptions on polymers according to 40 CFR 723.

National regulatory information

SARA Section 304 CERCLA:
n-Hexane (110-54-3): Reportable quantity = 5,000 (2270) lbs. (kg)
SARA Section 311/312 Hazards:
hydrocarbons, C7, n-alkanes, isoalkanes, cyclics (64742-49-0): Fire hazard, Immediate (acute) health hazard
SARA Section 313 Toxic release inventory:
n-Hexane (110-54-3): De minimis limit = 1.0 %, Reportable threshold = Standard
Clean Air Act Section 112(b):

n-Hexane (110-54-3)

State Regulations

Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65, State of California)

This product can not expose you to chemicals known to the State of California to cause cancer, birth defects or other reproductive harm.

Additional information

Other regulations, restrictions and prohibition regulations:

International chemical inventories (Registration status on substances): No data available

Other regulations, restrictions and prohibition regulations:

International chemical inventories (Registration status on substances): No data available

16. Other information

Hazardous Materials Information Label (HMIS)

Health:	1
Flammability:	3
Physical Hazard:	0
Personal Protection:	I

NFPA Hazard Ratings

Health:	1
Flammability:	3
Reactivity:	0
Unique Hazard:	---

Changes

Revision date:	03/26/2019
Revision No:	1,30

This version replaces all former issues.

Changes made in this revision see section: 2, 16.

Abbreviations and acronyms

ATE: Acute Toxicity Estimate.
CAS: Chemical Abstracts Service.
CLP: Classification Labelling Packaging Regulation; Regulation (EC) No 1272/2008.
C&L: Classification & Labeling.
DNEL: Derived No-Effect Level.
EC50: Effective concentration, 50 percent.
ECHA: European Chemicals Agency.
EINECS: European Inventory of Existing Commercial Chemical Substances.
ELINCS: European List of Notified Chemical Substances.
GHS: Globally Harmonized System of Classification and Labelling of Chemicals.
HSPA: Hydrocarbon Solvents Producers Association.
IATA: International Air Transport Association.
IBC-Code: International Code for the Construction and Equipment of Ships carrying Dangerous Chemicals in Bulk (International Bulk Chemical Code).

IC50 / ErC50: Inhibitory concentration, 50 percent.
ICAO-TI: International Civil Aviation Organization Technical Instruction.
IMDG-Code: International Maritime Dangerous Goods Code.
ISO: A standard of International Standards Organisation.
IUPAC: International Union for Pure and Applied Chemistry.
LC50: Lethal concentration, 50 percent.
LD50: Lethal Dose, 50 percent.
log Kow (Pow): octanol-water partition coefficient.
LQ: Limited Quantities.
MARPOL: Maritime Polluntion Convention (Convention for the Prevention of Pollution from Ships).
OC: Operational Conditions.
OECD: Organisation for Economic Co-operation and Development.
OSHA: Occupational Safety and Health Agency.
PBT: Persistent, bioaccumulabe and toxic.
PEC: Predicted Effect Concentration.
PNEC: Predicted No-Effect Concentration.
PPE: Personal Protection Equipment.
(Q)SAR: Quantitative-Structure-Activity-Relationship.
RMM: Risk Management Measure.
STOT - RE: Specific Target Organ Toxicity - Repeated Exposure.
STOT - SE: Specific Target Organ Toxicity - Single Exposure.
UN: United Nations.
UVCB: Substances of Unknown or Variable composition, Complex reaction products or Biological materials.
vPvB: Very persistent and very bioaccumulable.
WoE: Weight of Evidence.

For abbreviations and acronyms, see table at http://abbrev.esdscom.eu

Other data

Key literature references and sources for data:
The classification corresponds to current EC-lists, but is completed by statements of technical literature and company data.

Other public accessible sources:
Hazard Communication Standard (HCS 2012) according to 29 CFR 1910.1200 in the valid version in each case (https://www.ecfr.gov/)

Further information and practical guides on the internet:
eChemPortal (http://www.echemportal.org)
Environmental Protection Agency - EPA (http://www.epa.gov) / ECOTOX-Database (http://cfpub.epa.gov/ecotox)

Recommended restriction of application:
See under section 1.2 - Uses advised against.
Use this product only for intended purpose in accordance with our product informations.
Please refer to our internet website for more information (http://www.acmos.com).

Training advice:
Yearly briefing and instruction of employees by means of of operation instructions according to article 8 of EC-directive 98/24/EC.

Inquiry office: Laboratory (Division: Occupational- /Product security)
Contact person: Mr. Dryhaus (Telephone: 01149-421-5189-0, Telefax: 01149-421-5189-871)
Office hours: Mo - Th from 7.30 - 16.15 h and Fr from 7.30 - 13.30 h. Out of office hours no call diversion.

Disclaimer:
The information is based on the present level of our knowledge. It does not, however, give assurance of product properties and establishes no contract legal rights. The information contained herein are, to our knowledge at the time of their creation to be correct and been taken from sources deemed to be reliable. The information given is designed only as a guidance for safe handling, use, processing, storage, transportation, disposal and release The receiver of our product is singularly responsible for adhering to existing laws and regulations. All descriptions are approximate values, they are not specified for construction of specifications. This safety data sheet does not represent any operating instruction according to national chemical regulations. It may be used for creation, but must not replace it. The employer is not relieved from his duties. All technical information to occupational protection are directed predominately to experts first (safety engineers, occupational medicines).

Subject: Acmos 118-63 SDS and VOC content

Morning Eddie,

I am following up on your request. The latest MSDS is to be found in the attachment. VOC content is 84 % (622 g/l).

If you have any additional questions, please let us know.

Thank you!

Alyssa

Sincerely,

Alyssa Boehringer

2. Hazard(s) identification

Physical hazards	Flammable liquids	Category 2
Health hazards	Serious eye damage/eye irritation	Category 2A
	Germ cell mutagenicity	Category 1B
	Carcinogenicity	Category 1B
	Aspiration hazard	Category 1
Environmental hazards	Hazardous to the aquatic environment, acute hazard	Category 2
	Hazardous to the aquatic environment, long-term hazard	Category 2
OSHA defined hazards	Not classified.	

Label elements

Signal word Danger

Hazard statement Highly flammable liquid and vapor. May be fatal if swallowed and enters airways. Causes serious eye irritation. May cause genetic defects. May cause cancer. Toxic to aquatic life. Toxic to aquatic life with long lasting effects.

Precautionary statement

Prevention	This is a hazardous chemical product. It is important that all employees working with this product receive initial and periodic refresher training in its safe use and handling, both for basic risk management purposes and for compliance with the OSHA Hazard Communication Standard, 29 CFR 1910.1200. Model training materials are available upon request for many of our products. Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Keep away from heat/sparks/open flames/hot surfaces. - No smoking. Keep container tightly closed. Ground/bond container and receiving equipment. Use explosion-proof electrical/ventilating/lighting equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Wash thoroughly after handling. Avoid release to the environment. Wear protective gloves/protective clothing/eye protection/face protection.
Response	If swallowed: Immediately call a poison center/doctor. Do NOT induce vomiting. If on skin (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If exposed or concerned: Get medical advice/attention. If eye irritation persists: Get medical advice/attention. In case of fire: Use appropriate media to extinguish. Collect spillage.
Storage	Store in a well-ventilated place. Keep cool. Store locked up.
Disposal	Dispose of contents/container in accordance with local/regional/national/international regulations.
Hazard(s) not otherwise classified (HNOC)	Static accumulating flammable liquid can become electrostatically charged even in bonded and grounded equipment. Sparks may ignite liquid and vapor. May cause flash fire or explosion.
Supplemental information	100% of the mixture consists of component(s) of unknown acute oral toxicity. 100% of the mixture consists of component(s) of unknown acute dermal toxicity. 15% of the mixture consists of component(s) of unknown acute inhalation toxicity. 2.5% of the mixture consists of component(s) of unknown acute hazards to the aquatic environment. 2.5% of the mixture consists of component(s) of unknown long-term hazards to the aquatic environment.

3. Composition/information on ingredients

Mixtures

Chemical name	Common name and synonyms	CAS number	%
Light Aliphatic Solvent Naphtha (petroleum)		64742-89-8	80 - < 90*
"Siloxanes and Silicones, Di-Me"		63148-62-9	10 - < 20*
Other components below reportable levels			1 - < 3

*Designates that a specific chemical identity and/or percentage of composition has been withheld as a trade secret.

4. First-aid measures

Inhalation	Move to fresh air. Call a physician if symptoms develop or persist.
Skin contact	Take off immediately all contaminated clothing. Rinse skin with water/shower. Get medical attention if irritation develops and persists.
Eye contact	Immediately flush eyes with plenty of water for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if irritation develops and persists.
Ingestion	Call a physician or poison control center immediately. Rinse mouth. Do not induce vomiting. If vomiting occurs, keep head low so that stomach content doesn't get into the lungs.
Most important symptoms/effects, acute and delayed	Aspiration may cause pulmonary edema and pneumonitis. Dizziness. Severe eye irritation. Symptoms may include stinging, tearing, redness, swelling, and blurred vision.
Indication of immediate medical attention and special treatment needed	Provide general supportive measures and treat symptomatically. Thermal burns: Flush with water immediately. While flushing, remove clothes which do not adhere to affected area. Call an ambulance. Continue flushing during transport to hospital. Keep victim under observation. Symptoms may be delayed.
General information	Take off all contaminated clothing immediately. IF exposed or concerned: Get medical advice/attention. If you feel unwell, seek medical advice (show the label where possible). Ensure that medical personnel are aware of the material(s) involved, and take precautions to protect themselves. Show this safety data sheet to the doctor in attendance. Wash contaminated clothing before reuse.

5. Fire-fighting measures

Suitable extinguishing media	Water fog. Foam. Carbon dioxide (CO2). Dry chemical powder, carbon dioxide, sand or earth may be used for small fires only.
Unsuitable extinguishing media	Do not use water jet as an extinguisher, as this will spread the fire.

Specific hazards arising from the chemical	Vapors may form explosive mixtures with air. Vapors may travel considerable distance to a source of ignition and flash back. This product is a poor conductor of electricity and can become electrostatically charged. If sufficient charge is accumulated, ignition of flammable mixtures can occur. To reduce potential for static discharge, use proper bonding and grounding procedures. This liquid may accumulate static electricity when filling properly grounded containers. Static electricity accumulation may be significantly increased by the presence of small quantities of water or other contaminants. Material will float and may ignite on surface of water. During fire, gases hazardous to health may be formed.
Special protective equipment and precautions for firefighters	Self-contained breathing apparatus and full protective clothing must be worn in case of fire.
Fire fighting equipment/instructions	In case of fire and/or explosion do not breathe fumes. Move containers from fire area if you can do so without risk.
Specific methods	Use standard firefighting procedures and consider the hazards of other involved materials.
General fire hazards	Highly flammable liquid and vapor.

6. Accidental release measures

Personal precautions, protective equipment and emergency procedures	Keep unnecessary personnel away. Keep people away from and upwind of spill/leak. Eliminate all ignition sources (no smoking, flares, sparks, or flames in immediate area). Wear appropriate protective equipment and clothing during clean-up. Do not touch damaged containers or spilled material unless wearing appropriate protective clothing. Ventilate closed spaces before entering them. Use appropriate containment to avoid environmental contamination. Transfer by mechanical means such as vacuum truck to a salvage tank or other suitable container for recovery or safe disposal. Local authorities should be advised if significant spillages cannot be contained. For personal protection, see section 8 of the SDS.
Methods and materials for containment and cleaning up	Eliminate all ignition sources (no smoking, flares, sparks, or flames in immediate area). Keep combustibles (wood, paper, oil, etc.) away from spilled material. Take precautionary measures against static discharge. Use only non-sparking tools. This product is miscible in water. This material is classified as a water pollutant under the Clean Water Act and should be prevented from contaminating soil or from entering sewage and drainage systems which lead to waterways. Large Spills: Stop the flow of material, if this is without risk. Dike the spilled material, where this is possible. Use a non-combustible material like vermiculite, sand or earth to soak up the product and place into a container for later disposal. Following product recovery, flush area with water. Small Spills: Absorb with earth, sand or other non-combustible material and transfer to containers for later disposal. Wipe up with absorbent material (e.g. cloth, fleece). Clean surface thoroughly to remove residual contamination. Never return spills to original containers for re-use. Put material in suitable, covered, labeled containers. For waste disposal, see section 13 of the SDS.
Environmental precautions	Avoid release to the environment. Inform appropriate managerial or supervisory personnel of all environmental releases. Prevent further leakage or spillage if safe to do so. Avoid discharge into drains, water courses or onto the ground. Use appropriate containment to avoid environmental contamination.

7. Handling and storage

Precautions for safe handling	Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not handle, store or open near an open flame, sources of heat or sources of ignition. Protect material from direct sunlight. When using do not smoke. Explosion-proof general and local exhaust ventilation. Minimize fire risks from flammable and combustible materials (including combustible dust and static accumulating liquids) or dangerous reactions with incompatible materials. Handling operations that can promote accumulation of static charges include but are not limited to: mixing, filtering, pumping at high flow rates, splash filling, creating mists or sprays, tank and container filling, tank cleaning, sampling, gauging, switch loading, vacuum truck operations. Take precautionary measures against static discharges. All equipment used when handling the product must be grounded. Use non-sparking tools and explosion-proof equipment. Avoid contact with eyes. Avoid prolonged exposure. Should be handled in closed systems, if possible. Wear appropriate personal protective equipment. Wash hands thoroughly after handling. Avoid release to the environment. Observe good industrial hygiene practices. For additional information on equipment bonding and grounding, refer to the Canadian Electrical Code in Canada, (CSA C22.1), or the American Petroleum Institute (API) Recommended Practice 2003, "Protection Against Ignitions Arising out of Static, Lightning, and Stray Currents" or National Fire Protection Association (NFPA) 77, "Recommended Practice on Static Electricity" or National Fire Protection Association (NFPA) 70, "National Electrical Code".

Conditions for safe storage, including any incompatibilities

Store locked up. Keep away from heat, sparks and open flame. Prevent electrostatic charge build-up by using common bonding and grounding techniques. Eliminate sources of ignition. Avoid spark promoters. Ground/bond container and equipment. These alone may be insufficient to remove static electricity. Store in a cool, dry place out of direct sunlight. Store in original tightly closed container. Store in a well-ventilated place. Keep in an area equipped with sprinklers. Store away from incompatible materials (see Section 10 of the SDS).

8. Exposure controls/personal protection

Occupational exposure limits

The following constituents are the only constituents of the product which have a PEL, TLV or other recommended exposure limit. At this time, the other constituents have no known exposure limits.

US. OSHA Table Z-1 Limits for Air Contaminants (29 CFR 1910.1000)

Components	Type	Value
Light Aliphatic Solvent Naphtha (petroleum) (CAS 64742-89-8)	PEL	400 mg/m3
		100 ppm

US. NIOSH: Pocket Guide to Chemical Hazards

Components	Type	Value
Light Aliphatic Solvent Naphtha (petroleum) (CAS 64742-89-8)	TWA	400 mg/m3
		100 ppm

Biological limit values No biological exposure limits noted for the ingredient(s).

Appropriate engineering controls Explosion-proof general and local exhaust ventilation. Good general ventilation (typically 10 air changes per hour) should be used. Ventilation rates should be matched to conditions. If applicable, use process enclosures, local exhaust ventilation, or other engineering controls to maintain airborne levels below recommended exposure limits. If exposure limits have not been established, maintain airborne levels to an acceptable level. Provide eyewash station. Eye wash fountain and emergency showers are recommended.

Individual protection measures, such as personal protective equipment

Eye/face protection Wear safety glasses with side shields (or goggles).

Skin protection

Hand protection Wear appropriate chemical resistant gloves.

Other Wear appropriate chemical resistant clothing. Use of an impervious apron is recommended.

Respiratory protection Respiratory protection is not normally required for general core room workers when sufficient ventilation is provided to consistently maintain exposures below acceptable exposure criteria. Periodic exposure monitoring should be conducted to ensure exposures remain below relevant criteria. Use respiratory protection consisting of a chemical-specific cartridge respirator or supplied air respirator when performing line breaks, liquid transfers, or other operations where exposure to liquid or elevated vapor concentrations is possible.

Thermal hazards Wear appropriate thermal protective clothing, when necessary.

General hygiene considerations Observe any medical surveillance requirements. When using do not smoke. Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants.

9. Physical and chemical properties

Appearance

Physical state Liquid.

Form Liquid

Color Clear, colorless

Odor Solvent

Odor threshold Not available.

pH Not available.

pH concentration Not Available

Melting point/freezing point Not Available

Initial boiling point and boiling range	195.8 - 210.2 °F (91 - 99 °C)
Flash point	> 19.9 °F (> -6.7 °C) Setaflash Closed Cup
Evaporation rate	Not Available
Flammability (solid, gas)	Not applicable.
Upper/lower flammability or explosive limits	
Explosive limit - lower (%)	1 % (V) (Solvent)
Explosive limit - upper (%)	8 % (V) (Solvent)
Vapor pressure	< 40 mm Hg Approximate (Solvent)
Vapor density	Not Available
Relative density	0.72 - 0.73
Solubility(ies)	
Solubility (water)	Not Available
Partition coefficient (n-octanol/water)	Not Available
Auto-ignition temperature	550 °F (287.78 °C) estimated
Decomposition temperature	Not available.
Viscosity	Not available.
Other information	
Dynamic viscosity	Not Available
Explosive properties	Not explosive.
Flammability class	Flammable IB estimated
Oxidizing properties	Not oxidizing.
Thermal hazards	
Relative self-ignition temperature	Not Available

10. Stability and reactivity

Reactivity	The product is stable and non-reactive under normal conditions of use, storage and transport.
Chemical stability	Material is stable under normal conditions.
Possibility of hazardous reactions	Hazardous polymerization does not occur.
Conditions to avoid	Avoid heat, sparks, open flames and other ignition sources. Avoid temperatures exceeding the flash point. Contact with incompatible materials.
Incompatible materials	Strong oxidizing agents.
Hazardous decomposition products	No hazardous decomposition products are known.

11. Toxicological information

Information on likely routes of exposure

Inhalation	Prolonged inhalation may be harmful.
Skin contact	No adverse effects due to skin contact are expected.
Eye contact	Causes serious eye irritation.
Ingestion	Droplets of the product aspirated into the lungs through ingestion or vomiting may cause a serious chemical pneumonia.
Symptoms related to the physical, chemical and toxicological characteristics	Aspiration may cause pulmonary edema and pneumonitis. Dizziness. Severe eye irritation. Symptoms may include stinging, tearing, redness, swelling, and blurred vision.

Information on toxicological effects

Acute toxicity	May be fatal if swallowed and enters airways.
Skin corrosion/irritation	Prolonged skin contact may cause temporary irritation.
Serious eye damage/eye irritation	Causes serious eye irritation.

Respiratory or skin sensitization

Respiratory sensitization Not a respiratory sensitizer.

Skin sensitization This product is not expected to cause skin sensitization.

Germ cell mutagenicity May cause genetic defects.

Carcinogenicity May cause cancer.

IARC Monographs. Overall Evaluation of Carcinogenicity

Not listed.

OSHA Specifically Regulated Substances (29 CFR 1910.1001-1052)

Not regulated.

US. National Toxicology Program (NTP) Report on Carcinogens

Not listed.

Reproductive toxicity This product is not expected to cause reproductive or developmental effects.

Specific target organ toxicity - single exposure Not classified.

Specific target organ toxicity - repeated exposure Not classified.

Aspiration hazard May be fatal if swallowed and enters airways.

Chronic effects Prolonged inhalation may be harmful.

12. Ecological information

Ecotoxicity Toxic to aquatic life with long lasting effects.

Components		Species	Test Results
"Siloxanes and Silicones, Di-Me" (CAS 63148-62-9)			
Aquatic			
Fish	LC50	Channel catfish (Ictalurus punctatus)	2.36 - 4.15 mg/l, 96 hours
Light Aliphatic Solvent Naphtha (petroleum) (CAS 64742-89-8)			
Aquatic			
Crustacea	EC50	Water flea (Daphnia pulex)	2.7 - 5.1 mg/l, 48 hours
Fish	LC50	Rainbow trout,donaldson trout (Oncorhynchus mykiss)	8.8 mg/l, 96 hours
			8.8 mg/l, 96 hours

Persistence and degradability No data is available on the degradability of this product.

Bioaccumulative potential No data available.

Mobility in soil No data available.

Other adverse effects No other adverse environmental effects (e.g. ozone depletion, photochemical ozone creation potential, endocrine disruption, global warming potential) are expected from this component.

13. Disposal considerations

Disposal instructions Collect and reclaim or dispose in sealed containers at licensed waste disposal site. Do not allow this material to drain into sewers/water supplies. Do not contaminate ponds, waterways or ditches with chemical or used container. Dispose of contents/container in accordance with local/regional/national/international regulations.

Local disposal regulations Dispose in accordance with all applicable regulations.

Hazardous waste code The waste code should be assigned in discussion between the user, the producer and the waste disposal company.

Waste from residues / unused products Dispose of in accordance with local regulations. Empty containers or liners may retain some product residues. This material and its container must be disposed of in a safe manner (see: Disposal instructions).

Contaminated packaging Since emptied containers may retain product residue, follow label warnings even after container is emptied. Empty containers should be taken to an approved waste handling site for recycling or disposal.

14. Transport information

DOT

UN number UN1206

UN proper shipping name Heptanes solution

Transport hazard class(es)

Class	3
Subsidiary risk	-
Packing group	II

Environmental hazards

Marine pollutant	Yes

Special precautions for user Read safety instructions, SDS and emergency procedures before handling.

Transport hazard class(es)

Label(s)	3

ERG 128

Transport hazard class(es)

Marine pollutant	Light Aliphatic Solvent Naphtha (petroleum)
Marine pollutant	"Siloxanes and Silicones, Di-Me"

TDG

UN number	UN1206
UN proper shipping name	HEPTANES SOLUTION

Transport hazard class(es)

Class	3
Subsidiary risk	-
Packing group	II

Special precautions for users Read safety instructions, SDS and emergency procedures before handling.

15. Regulatory information

US federal regulations This product is a "Hazardous Chemical" as defined by the OSHA Hazard Communication Standard, 29 CFR 1910.1200.

TSCA Section 12(b) Export Notification (40 CFR 707, Subpt. D)

Not regulated.

CERCLA Hazardous Substance List (40 CFR 302.4)

Not listed.

SARA 304 Emergency release notification

Not regulated.

OSHA Specifically Regulated Substances (29 CFR 1910.1001-1052)

Not regulated.

Superfund Amendments and Reauthorization Act of 1986 (SARA)

SARA 302 Extremely hazardous substance

Not listed.

SARA 311/312 Hazardous chemical Yes

Classified hazard categories
Flammable (gases, aerosols, liquids, or solids)
Serious eye damage or eye irritation
Germ cell mutagenicity
Carcinogenicity
Aspiration hazard
Hazard not otherwise classified (HNOC)

SARA 313 (TRI reporting)

Not regulated.

Other federal regulations

Clean Air Act (CAA) Section 112 Hazardous Air Pollutants (HAPs) List

Not regulated.

Clean Air Act (CAA) Section 112(r) Accidental Release Prevention (40 CFR 68.130)

Not regulated.

Safe Drinking Water Act (SDWA) Not regulated.

US state regulations

California Proposition 65

California Safe Drinking Water and Toxic Enforcement Act of 2016 (Proposition 65): This material is not known to contain any chemicals currently listed as carcinogens or reproductive toxins. For more information go to www.P65Warnings.ca.gov.

US. California. Candidate Chemicals List. Safer Consumer Products Regulations (Cal. Code Regs, tit. 22, 69502.3, subd. (a))

Light Aliphatic Solvent Naphtha (petroleum) (CAS 64742-89-8)

International Inventories

Country(s) or region	Inventory name	On inventory (yes/no)*

Safety Data Sheet
KERNTOP WV 031 111 COATING IBC716 FW

SECTION 1. IDENTIFICATION

Product name	:	KERNTOP WV 031 111 COATING IBC716 FW
Material	:	852674

Manufacturer or supplier's details

Company	:	ASK CHEMICALS LLC
Address	:	495 Metro Place South Suite 250 Dublin, OH 43017 United States of America
Emergency telephone number	:	1-855-ASK4YOU (1-855-275-4968)
E-mail address	:	EHSRequests.usa@ask-chemicals.com

SECTION 2. HAZARDS IDENTIFICATION

GHS Classification

Skin irritation	:	Category 2
Eye irritation	:	Category 2A
Carcinogenicity	:	Category 1A

GHS label elements

Hazard pictograms :

Signal word : Danger

Hazard statements : H315 Causes skin irritation.
H319 Causes serious eye irritation.
H350 May cause cancer.

Precautionary statements : **Prevention:**
P201 Obtain special instructions before use.
P202 Do not handle until all safety precautions have been read and understood.
P264 Wash skin thoroughly after handling.
P280 Wear protective gloves/ protective clothing/ eye protection/ face protection.
Response:
P302 + P352 IF ON SKIN: Wash with plenty of soap and water.
P305 + P351 + P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P308 + P313 IF exposed or concerned: Get medical advice/ attention.
P332 + P313 If skin irritation occurs: Get medical advice/ attention.
P337 + P313 If eye irritation persists: Get medical advice/ attention.

P362 Take off contaminated clothing and wash before reuse.
Storage:
P405 Store locked up.
Disposal:
P501 Dispose of contents/ container to an approved waste disposal plant.

Other hazards

None known.

SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS

Substance / Mixture : Mixture

Hazardous components

Chemical name	CAS-No.	Concentration (%)
MICA	12001-26-2	>= 10 - < 20
PYROPHYLLITE	12269-78-2	>= 5 - < 10
QUARTZ / SAND	14808-60-7	>= 1 - < 5
GRAPHITE	7782-42-5	>= 1 - < 5
ATTAPULGITE	12174-11-7	>= 1 - < 5
KAOLIN	1332-58-7	>= 1 - < 5

SECTION 4. FIRST AID MEASURES

General advice : Consult a physician.

If inhaled : Remove person to fresh air. If signs/symptoms continue, get medical attention.

In case of skin contact : Take off contaminated clothing and shoes immediately.
If on skin, rinse well with water.
If on clothes, remove clothes.

In case of eye contact : Remove contact lenses.
Rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes.

If swallowed : If swallowed, DO NOT induce vomiting unless directed to do so by medical personnel.

Most important symptoms and effects, both acute and delayed : None known.

SECTION 5. FIREFIGHTING MEASURES

Suitable extinguishing media : Use water spray, alcohol-resistant foam, dry chemical or carbon dioxide.

Specific hazards during firefighting : Do not use a solid water stream as it may scatter and spread fire.

Cool closed containers exposed to fire with water spray.

Special protective equipment for firefighters : In the event of fire, wear self-contained breathing apparatus.

SECTION 6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures : Use personal protective equipment.
Ensure adequate ventilation.
Evacuate personnel to safe areas.
Keep people away from and upwind of spill/leak.
Material can create slippery conditions.

Environmental precautions : Local authorities should be advised if significant spillages cannot be contained.

Methods and materials for containment and cleaning up : Keep in suitable, closed containers for disposal.
Clean contaminated floors and objects thoroughly while observing environmental regulations.

SECTION 7. HANDLING AND STORAGE

Advice on safe handling : Avoid contact with skin and eyes.
For personal protection see section 8.
Smoking, eating and drinking should be prohibited in the application area.

SECTION 8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Components with workplace control parameters

Components	CAS-No.	Value type (Form of exposure)	Control parameters / Permissible concentration	Basis

Hazardous components without workplace control parameters

Components	CAS-No.
PYROPHYLLITE	12269-78-2
ATTAPULGITE	12174-11-7

Personal protective equipment

Eye protection : Safety goggles

Protective measures : Wear suitable protective equipment.
Avoid contact with skin.
When using do not eat, drink or smoke.

Hygiene measures : Avoid contact with skin, eyes and clothing.
Wash hands before breaks and immediately after handling the product.
Remove contaminated clothing and protective equipment before entering eating areas.

SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance : liquid

Colour : no data available

Odour : no data available

Odour Threshold : no data available

pH : no data available

Melting point	:	no data available
Boiling point	:	no data available
Flash point	:	not applicable
Evaporation rate	:	no data available
Flammability (solid, gas)	:	no data available
Burning rate	:	no data available
Upper explosion limit	:	no data available
Lower explosion limit	:	no data available
Vapour pressure	:	no data available
Relative vapour density	:	no data available
Relative density	:	no data available
Density	:	1.349 g/cm3
Bulk density	:	no data available
Solubility(ies)		
Water solubility	:	no data available
Solubility in other solvents	:	no data available
Partition coefficient: n-octanol/water	:	no data available
Auto-ignition temperature	:	no data available
Decomposition temperature	:	no data available
Viscosity		
Viscosity, dynamic	:	no data available
Viscosity, kinematic	:	no data available

SECTION 10. STABILITY AND REACTIVITY

Chemical stability	:	Stable

SECTION 11. TOXICOLOGICAL INFORMATION

Information on likely routes of exposure
Skin Absorption

Acute toxicity

Product:

Acute oral toxicity	:	Acute toxicity estimate: > 5,000 mg/kg Method: Calculation method

Components:

GRAPHITE:

Acute oral toxicity	:	LD50 (rat): > 2,000 mg/kg
Acute inhalation toxicity	:	Assessment: The substance or mixture has no acute inhalation toxicity

KAOLIN:

Acute oral toxicity	:	LD50 (rat): > 5,000 mg/kg
Acute dermal toxicity	:	LD50 (rat): > 5,000 mg/kg

Skin corrosion/irritation

Components:

MICA:
Assessment: No skin irritation
Result: No skin irritation

PYROPHYLLITE:
Assessment: Irritating to skin.
Result: Irritating to skin.

QUARTZ / SAND:
Assessment: Irritating to skin.
Result: Irritating to skin.

GRAPHITE:
Assessment: No skin irritation
Result: No skin irritation

ATTAPULGITE:
Assessment: Irritating to skin.
Result: Irritating to skin.

KAOLIN:
Assessment: No skin irritation
Result: No skin irritation

Serious eye damage/eye irritation

Components:

MICA:
Result: No eye irritation
Assessment: No eye irritation

PYROPHYLLITE:
Result: Mild eye irritation
Assessment: Mild eye irritation

QUARTZ / SAND:
Result: Irritating to eyes.
Assessment: Irritating to eyes.

GRAPHITE:
Result: No eye irritation
Assessment: No eye irritation

ATTAPULGITE:
Result: Irritating to eyes.
Assessment: Irritating to eyes.

KAOLIN:
Result: No eye irritation
Assessment: No eye irritation

Respiratory or skin sensitisation

Components:
GRAPHITE:
Species: mouse
Result: Did not cause sensitisation on laboratory animals.

Germ cell mutagenicity

Components:
GRAPHITE:
Genotoxicity in vitro : Remarks: In vitro tests did not show mutagenic effects

Carcinogenicity

Components:
QUARTZ / SAND:
Carcinogenicity - Assessment : Human carcinogen.

ATTAPULGITE:
Carcinogenicity - Assessment : Limited evidence of a carcinogenic effect.

KAOLIN:
Carcinogenicity - Assessment : Possible human carcinogen

IARC	Group 1: Carcinogenic to humans	
	QUARTZ / SAND	14808-60-7
	KAOLIN	1332-58-7
	Group 2B: Possibly carcinogenic to humans	
	ATTAPULGITE	12174-11-7

OSHA	No component of this product present at levels greater than or equal to 0.1% is identified as a carcinogen or potential carcinogen by OSHA.	
NTP	Known to be human carcinogen	
	QUARTZ / SAND	14808-60-7
	KAOLIN	1332-58-7

Reproductive toxicity

Components:

GRAPHITE:

Effects on fertility	:	Species: rat Application Route: Oral Symptoms: No effects on reproduction parameters.
Effects on foetal development	:	Species: rat Application Route: Oral Symptoms: No specific developmental abnormalities. Method: OECD Test Guideline 422

Further information

Components:

QUARTZ / SAND:
Remarks: Lungs

SECTION 12. ECOLOGICAL INFORMATION

Ecotoxicity

Components:

GRAPHITE:

Toxicity to fish	:	LC 50 (Danio rerio (zebra fish)): > 100 mg/l Exposure time: 96 h Test Type: semi-static test Method: OECD Test Guideline 203
Toxicity to daphnia and other aquatic invertebrates	:	EC 50 (Daphnia): > 100 mg/l Exposure time: 48 h Test Type: static test Method: OECD Test Guideline 202
Toxicity to algae	:	NOEC (Pseudokirchneriella subcapitata (green algae)): > 100 mg/l Exposure time: 72 h Test Type: static test

Persistence and degradability

No data available

Bioaccumulative potential

No data available

Mobility in soil

No data available

Other adverse effects

Product:

Ozone-Depletion Potential	:	Regulation: 40 CFR Protection of Environment; Part 82 Protection of Stratospheric Ozone - CAA Section 602 Class I Substances Remarks: This product neither contains, nor was manufactured with a Class I or Class II ODS as defined by the U.S. Clean Air Act Section 602 (40 CFR 82, Subpt. A, App.A + B).

SECTION 13. DISPOSAL CONSIDERATIONS

Disposal methods

Waste from residues	:	Dispose of wastes in an approved waste disposal facility. Dispose of in accordance with all applicable local, state and federal regulations.

SECTION 14. TRANSPORT INFORMATION

REGULATION
U.S. DOT - ROAD
Not regulated as a dangerous good

U.S. DOT - RAIL
Not regulated as a dangerous good

U.S. DOT - INLAND WATERWAYS
Not regulated as a dangerous good

TRANSPORT CANADA - ROAD
Not regulated as a dangerous good

TRANSPORT CANADA - RAIL
Not regulated as a dangerous good

TRANSPORT CANADA - INLAND WATERWAYS
Not regulated as a dangerous good

MEXICAN REGULATION FOR THE LAND TRANSPORT OF HAZARDOUS MATERIALS AND WASTES

INTERNATIONAL MARITIME DANGEROUS GOODS
Not regulated as a dangerous good

INTERNATIONAL AIR TRANSPORT ASSOCIATION - CARGO

Not regulated as a dangerous good

***ORM = ORM-D, CBL = COMBUSTIBLE LIQUID**

Dangerous goods descriptions (if indicated above) may not reflect quantity, end-use or region-specific exceptions that can be applied. Consult shipping documents for descriptions that are specific to the shipment.

SECTION 15. REGULATORY INFORMATION

TSCA list : The following substance(s) is/are subject to a Significant New Use Rule:

EPCRA - Emergency Planning and Community Right-to-Know Act

CERCLA Reportable Quantity

Components	CAS-No.	Component RQ (lbs)	Calculated product RQ (lbs)
METHANOL	67-56-1	5000	*
METHANOL	67-56-1	100	*

*: Calculated RQ exceeds reasonably attainable upper limit.

SARA 304 Extremely Hazardous Substances Reportable Quantity

This material does not contain any components with a section 304 EHS RQ.

SARA 311/312 Hazards : Acute Health Hazard
Chronic Health Hazard

SARA 302 : SARA 302: No chemicals in this material are subject to the reporting requirements of SARA Title III, Section 302.

SARA 313 : SARA 313: This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Section 313.

California Prop 65

WARNING! This product contains a chemical known to the State of California to cause cancer.

QUARTZ / SAND	14808-60-7
ATTAPULGITE	12174-11-7
KAOLIN	1332-58-7
DISTILLATES (PETROLEUM), HYDROTREATED LIGHT	64742-47-8
1,4-DIOXANE	123-91-1
ETHYLENE OXIDE	75-21-8

WARNING: This product contains a chemical known to the State of California to cause birth defects or other reproductive harm.

METHANOL	67-56-1
ETHYLENE OXIDE	75-21-8

The components of this product are reported in the following inventories:

DSL : All components of this product are on the Canadian DSL.

AICS	:	Not in compliance with the inventory
NZIoC	:	On the inventory, or in compliance with the inventory
ENCS	:	Not in compliance with the inventory
KECI	:	On the inventory, or in compliance with the inventory

SAFETY DATA SHEET

Section 1. Identification

Product name Rustilo 4175

SDS # 458532

Historic SDS #: 09027

Code 458532-US03

Relevant identified uses of the substance or mixture and uses advised against

Product use Rust preventive
For specific application advice see appropriate Technical Data Sheet or consult our company representative.

Supplier BP Lubricants USA Inc.
1500 Valley Road
Wayne, NJ 07470
Telephone: +1-888-CASTROL
Product Information: +1-877-641-1600

EMERGENCY HEALTH INFORMATION: +1-800-447-8735

EMERGENCY SPILL INFORMATION: +1-800-424-9300 (CHEMTREC USA)
+1-703-527-3887 (CHEMTREC outside the US)

Section 2. Hazards identification

OSHA/HCS status This material is not considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).

Classification of the substance or mixture Not classified.

GHS label elements

Signal word No signal word.

Hazard statements No known significant effects or critical hazards.

Precautionary statements

Prevention Not applicable.

Response Not applicable.

Storage Not applicable.

Disposal Not applicable.

Hazards not otherwise classified Defatting to the skin.

Section 3. Composition/information on ingredients

Substance/mixture Mixture

Corrosion inhibitors and additives in aqueous solution.

Ingredient name	CAS number	%
Triethanolamine	102-71-6	≤10
Boric acid	10043-35-3	≤3

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

Section 3. Composition/information on ingredients

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact
In case of contact, immediately flush eyes with plenty of water for at least 15 minutes. Eyelids should be held away from the eyeball to ensure thorough rinsing. Check for and remove any contact lenses. Get medical attention.

Skin contact
Wash skin thoroughly with soap and water or use recognized skin cleanser. Remove contaminated clothing and shoes. Wash clothing before reuse. Get medical attention if symptoms occur. Clean shoes thoroughly before reuse.

Inhalation
If inhaled, remove to fresh air. In case of inhalation of decomposition products in a fire, symptoms may be delayed. The exposed person may need to be kept under medical surveillance for 48 hours. Get medical attention if symptoms occur.

Ingestion
Do not induce vomiting unless directed to do so by medical personnel. Wash out mouth with water if person is conscious. Get medical attention if symptoms occur.

Protection of first-aiders
No action shall be taken involving any personal risk or without suitable training.

Most important symptoms/effects, acute and delayed

See Section 11 for more detailed information on health effects and symptoms.

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physician
Treatment should in general be symptomatic and directed to relieving any effects.
In case of inhalation of decomposition products in a fire, symptoms may be delayed.
The exposed person may need to be kept under medical surveillance for 48 hours.

Specific treatments
No specific treatment.

Section 5. Fire-fighting measures

Extinguishing media

Suitable extinguishing media
In case of fire, use water fog, alcohol resistant foam, dry chemical or carbon dioxide extinguisher or spray.

Unsuitable extinguishing media
Do not use water jet.

Specific hazards arising from the chemical
In a fire or if heated, a pressure increase will occur and the container may burst.

Hazardous combustion products
Combustion products may include the following:
phosphorus oxides
carbon oxides (CO, CO_2) (carbon monoxide, carbon dioxide)
nitrogen oxides (NO, NO_2 etc.)

Special protective actions for fire-fighters
No action shall be taken involving any personal risk or without suitable training. Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire.

Special protective equipment for fire-fighters
Fire-fighters should wear positive pressure self-contained breathing apparatus (SCBA) and full turnout gear.

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel

No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Put on appropriate personal protective equipment. Floors may be slippery; use care to avoid falling.

For emergency responders

If specialized clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".

Environmental precautions

Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

Methods and materials for containment and cleaning up

Small spill

Stop leak if without risk. Move containers from spill area. Absorb with an inert material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.

Large spill

Stop leak if without risk. Move containers from spill area. Prevent entry into sewers, water courses, basements or confined areas. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations. Dispose of via a licensed waste disposal contractor.

Section 7. Handling and storage

Precautions for safe handling

Protective measures

Put on appropriate personal protective equipment (see Section 8). Avoid breathing vapor or mist. Avoid contact of spilled material and runoff with soil and surface waterways. Avoid prolonged or repeated contact with skin. During metal working, solid particles from workpieces or tools will contaminate the fluid and may cause abrasions of the skin. Where such abrasions result in a penetration of the skin, first aid treatment should be applied as soon as reasonably possible. The presence of certain metals in the workpiece or tool, such as chromium, cobalt and nickel, can contaminate the metalworking fluid and as a result may induce allergic skin reactions. Evaporation of water from soluble cutting fluids during use may lead to an increase in concentration which may result in the development of skin conditions due to irritation and defatting. It is important to monitor fluid strength on a regular basis with a refractometer and maintain it at the recommended concentration. Lubricants from other sources and other contaminants should be minimized. Swarf and other debris should be removed. To maintain optimum performance and minimize bacterial spoilage, machine tool coolant systems should be cleaned on a regular basis.

Advice on general occupational hygiene

Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Wash thoroughly after handling. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

Conditions for safe storage, including any incompatibilities

Store in accordance with local regulations. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Keep container tightly closed and sealed until ready for use. Store and use only in equipment/containers designed for use with this product. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination. DO NOT ADD NITRITES TO THIS FLUID.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
Triethanolamine	**ACGIH TLV (United States).** TWA: 5 mg/m³ 8 hours. Issued/Revised: 9/1994
Boric acid	**ACGIH TLV (United States).** STEL: 6 mg/m³ 15 minutes. Issued/Revised: 1/2005 Form: Inhalable fraction TWA: 2 mg/m³ 8 hours. Issued/Revised: 1/2005 Form: Inhalable fraction

While specific OELs for certain components may be shown in this section, other components may be present in any mist, vapor or dust produced. Therefore, the specific OELs may not be applicable to the product as a whole and are provided for guidance only.

Appropriate engineering controls

All activities involving chemicals should be assessed for their risks to health, to ensure exposures are adequately controlled. Personal protective equipment should only be considered after other forms of control measures (e.g. engineering controls) have been suitably evaluated. Personal protective equipment should conform to appropriate standards, be suitable for use, be kept in good condition and properly maintained.
Your supplier of personal protective equipment should be consulted for advice on selection and appropriate standards. For further information contact your national organisation for standards.
Provide exhaust ventilation or other engineering controls to keep the relevant airborne concentrations below their respective occupational exposure limits.
The final choice of protective equipment will depend upon a risk assessment. It is important to ensure that all items of personal protective equipment are compatible.

Environmental exposure controls

Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Individual protection measures

Hygiene measures

Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period.
Appropriate techniques should be used to remove potentially contaminated clothing.
Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Eye/face protection

Undiluted fluid: Chemical goggles.
Diluted fluid: Safety glasses with side shields.

Skin protection

Hand protection

Wear suitable gloves. Undiluted fluid: Wear chemical resistant gloves. Recommended: nitrile gloves.
Diluted fluid: Wear protective gloves if prolonged or repeated contact is likely.
Recommended: nitrile gloves. The correct choice of protective gloves depends upon the chemicals being handled, the conditions of work and use, and the condition of the gloves (even the best chemically resistant glove will break down after repeated chemical exposures). Most gloves provide only a short time of protection before they must be discarded and replaced. Because specific work environments and material handling practices vary, safety procedures should be developed for each intended application. Gloves should therefore be chosen in consultation with the supplier/manufacturer and with a full assessment of the working conditions.

Body protection

Use of protective clothing is good industrial practice.
Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
Cotton or polyester/cotton overalls will only provide protection against light superficial contamination that will not soak through to the skin. Overalls should be laundered on a regular basis. When the risk of skin exposure is high (e.g. when cleaning up spillages or

Section 8. Exposure controls/personal protection

if there is a risk of splashing) then chemical resistant aprons and/or impervious chemical suits and boots will be required.

Other skin protection

Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory protection

In case of insufficient ventilation, wear suitable respiratory equipment.
For protection against metal working fluids, respiratory protection that is classified as “resistant to oil” (class R) or oil proof (class P) should be selected where appropriate. Depending on the level of airborne contaminants, an air-purifying, half-mask respirator (with HEPA filter) including disposable (P- or R-series) (for oil mists less than 50mg/m3), or any powered, air-purifying respirator equipped with hood or helmet and HEPA filter (for oil mists less than 125 mg/m3).
Where organic vapours are a potential hazard during metalworking operations, a combination particulate and organic vapour filter may be necessary.
The correct choice of respiratory protection depends upon the chemicals being handled, the conditions of work and use, and the condition of the respiratory equipment. Safety procedures should be developed for each intended application. Respiratory protection equipment should therefore be chosen in consultation with the supplier/manufacturer and with a full assessment of the working conditions.

Section 9. Physical and chemical properties

Appearance

Physical state Liquid.

Color Yellow. [Light]

Odor Not available.

Odor threshold Not available.

pH 9.1 [Conc. (% w/w): 5%]

Melting point Not available.

Boiling point Not available.

Flash point Closed cup: >100°C (>212°F) [Estimated. Water content interferes with flash point determination.]

Evaporation rate Not available.

Flammability (solid, gas) Not applicable. Based on - Physical state

Lower and upper explosive (flammable) limits Not available.

Vapor pressure Not available.

Vapor density Not available.

Density >1000 kg/m³ (>1 g/cm³) at 15.6°C

Solubility Soluble in water.

Partition coefficient: n-octanol/water Not available.

Auto-ignition temperature Not available.

Decomposition temperature Not available.

Viscosity Not available.

Section 10. Stability and reactivity

Reactivity No specific test data available for this product. Refer to Conditions to avoid and Incompatible materials for additional information.

Chemical stability The product is stable.

Possibility of hazardous reactions Under normal conditions of storage and use, hazardous reactions will not occur.
Under normal conditions of storage and use, hazardous polymerization will not occur.

Section 10. Stability and reactivity

Conditions to avoid Avoid excessive heat.

Incompatible materials Reactive or incompatible with the following materials: oxidizing materials.
Slightly reactive or incompatible with the following materials: acids.

Hazardous decomposition products Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Section 11. Toxicological information

Information on toxicological effects

Classification

Product/ingredient name	OSHA	IARC	NTP
Triethanolamine	-	3	-

Descriptors:

OSHA:
+ - Potential occupational carcinogen

IARC:
1 - Carcinogenic to human.
2A - Probable human carcinogen.
2B - Possible carcinogen to human.
3 - Not classifiable as a human carcinogen.
4 - Probably not a human carcinogen.

NTP:
Proven - Known to be human carcinogens.
Possible - Reasonably anticipated to be human carcinogens.

Information on the likely routes of exposure Routes of entry anticipated: Dermal, Inhalation.

Potential acute health effects

Eye contact No known significant effects or critical hazards.

Skin contact No known significant effects or critical hazards.

Inhalation Exposure to decomposition products may cause a health hazard. Serious effects may be delayed following exposure.

Ingestion No known significant effects or critical hazards.

Symptoms related to the physical, chemical and toxicological characteristics

Eye contact No specific data.

Skin contact Adverse symptoms may include the following:
irritation
dryness
cracking

Inhalation No specific data.

Ingestion No specific data.

Delayed and immediate effects and also chronic effects from short and long term exposure

Short term exposure

Potential immediate effects Not available.

Potential delayed effects Not available.

Long term exposure

Potential immediate effects Not available.

Potential delayed effects Not available.

Potential chronic health effects

General No known significant effects or critical hazards.

Carcinogenicity No known significant effects or critical hazards.

Mutagenicity No known significant effects or critical hazards.

Section 11. Toxicological information

Teratogenicity No known significant effects or critical hazards.

Developmental effects No known significant effects or critical hazards.

Fertility effects No known significant effects or critical hazards.

Numerical measures of toxicity

Acute toxicity estimates

Route	ATE value
Oral	250027 mg/kg

Additional information Alkanolamine: This product contains an alkanolamine. In all metalworking fluids containing amines, there is a potential for forming nitrosamines which are animal carcinogens. Therefore, no nitrites or related nitrosating agents should be added to such compositions.

Section 12. Ecological information

Toxicity

No testing has been performed by the manufacturer.

Persistence and degradability

Expected to be biodegradable.

Bioaccumulative potential

Not available.

Mobility in soil

Soil/water partition coefficient (K_{OC}) Not available.

Mobility Liquid. Soluble in water.

Other adverse effects No known significant effects or critical hazards.

Section 13. Disposal considerations

Disposal methods The generation of waste should be avoided or minimized wherever possible. Significant quantities of waste product residues should not be disposed of via the foul sewer but processed in a suitable effluent treatment plant. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Empty containers or liners may retain some product residues. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Diluted Fluid The spent diluted fluid comprises a relatively stable emulsion. Dispose of via an authorised person/ licensed waste disposal contractor or by other suitable waste treatment techniques (e.g. emulsion splitting, coagulation and filtration) approved by the local authority. Spent fluid should never be disposed of down the drain. The aqueous phase should not be discharged into sewage systems unless provided for by local regulations; the non-aqueous phase should be disposed of as undiluted fluid. Note that separated aqueous solutions or effluents may contain metal salts as well as traces of oil and must be checked for conformity in these respects against consents given by the authorities before disposal. Further treatment may be required.

Section 14. Transport information

	DOT Classification	TDG Classification	IMDG	IATA
UN number	Not regulated.	Not regulated.	Not regulated.	Not regulated.
UN proper shipping name	-	-	-	-

Notice to reader

All reasonably practicable steps have been taken to ensure this data sheet and the health, safety and environmental information contained in it is accurate as of the date specified below. No warranty or representation, express or implied is made as to the accuracy or completeness of the data and information in this data sheet.

The data and advice given apply when the product is sold for the stated application or applications. You should not use the product other than for the stated application or applications without seeking advice from BP Group.

It is the user's obligation to evaluate and use this product safely and to comply with all applicable laws and regulations. The BP Group shall not be responsible for any damage or injury resulting from use, other than the stated product use of the material, from any failure to adhere to recommendations, or from any hazards inherent in the nature of the material. Purchasers of the product for supply to a third party for use at work, have a duty to take all necessary steps to ensure that any person handling or using the product is provided with the information in this sheet. Employers have a duty to tell employees and others who may be affected of any hazards described in this sheet and of any precautions that should be taken. You can contact the BP Group to ensure that this document is the most current available. Alteration of this

Section 16. Other information

document is strictly prohibited.

SAFETY DATA SHEET

Section 1: Product and company identification

Product code WG102922

Product name INDUSTRIQ Primer SB 1K
W110
Zinc Dust Primer

Validation date 6. January 2018

Relevant identified uses of the substance or mixture and uses advised against

Material uses Synthetic resin based coating, used for industrial painting of metal and/or plastic material.

Supplier's details

Worwag Coatings LLC
3420 Kossuth ST
Lafayette, IN 47905
USA
Tel .: (765) 448-9681

Emergency telephone number (with hours of operation) Chemtrec 800-424-9300 (24h)

Section 2: Hazards identification

Classification of the substance or mixture

FLAMMABLE LIQUIDS - Category 3
SKIN SENSITIZATION - Category 1
CARCINOGENICITY - Category 2
SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) (hearing organs) - Category 2

GHS label elements

Hazard pictograms

Signal word Warning

Hazard statements

H226 - Flammable liquid and vapor.
H317 - May cause an allergic skin reaction.
H351 - Suspected of causing cancer.
H373 - May cause damage to organs through prolonged or repeated exposure. (hearing organs)

Precautionary statements

General Not applicable.

Section 2: Hazards identification

Prevention

P201 - Obtain special instructions before use.
P202 - Do not handle until all safety precautions have been read and understood.
P280 - Wear protective gloves. Wear eye or face protection. Wear protective clothing.
P210 - Keep away from heat, hot surfaces, sparks, open flames and other ignition sources. No smoking.
P241 - Use explosion-proof electrical, ventilating, lighting and all material-handling equipment.
P242 - Use only non-sparking tools.
P243 - Take precautionary measures against static discharge.
P233 - Keep container tightly closed.
P260 - Do not breathe vapor.
P272 (OSHA) - Contaminated work clothing must not be allowed out of the workplace.

Response

P314 - Get medical attention if you feel unwell.
P308 + P313 - IF exposed or concerned: Get medical attention.
P303 + P361 + P353 - IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water or shower.
P302 + P352 + P363 - IF ON SKIN: Wash with plenty of soap and water. Wash contaminated clothing before reuse.
P333 + P313 - If skin irritation or rash occurs: Get medical attention.

Storage

P405 - Store locked up.
P403 - Store in a well-ventilated place.
P235 - Keep cool.

Disposal

P501 - Dispose of contents and container in accordance with all local, regional, national and international regulations.

Hazards not otherwise classified

None known.

Section 3: Composition/information on ingredients

Substance/mixture Mixture

Ingredient name	%	CAS number
xylene	≤5	1330-20-7
zinc oxide	≤3	1314-13-2
Solvent naphtha (petroleum), light arom.	≤2.5	64742-95-6
Solvent naphtha (petroleum), light arom.	≤2.3	64742-95-6
n-Butyl acetate	≤3	123-86-4
Ethylbenzene	≤1.8	100-41-4
2-methoxy-1-methylethyl acetate	≤3	108-65-6
2-butanone oxime	≤0.3	96-29-7

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4: First aid measures

Description of necessary first aid measures

Eye contact	Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention.
Inhalation	Remove victim to fresh air and keep at rest in a position comfortable for breathing. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.
Skin contact	Wash with plenty of soap and water. Remove contaminated clothing and shoes. Wash contaminated clothing thoroughly with water before removing it, or wear gloves. Continue to rinse for at least 10 minutes. Get medical attention. In the event of any complaints or symptoms, avoid further exposure. Wash clothing before reuse. Clean shoes thoroughly before reuse.
Ingestion	Wash out mouth with water. Remove dentures if any. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Stop if the exposed person feels sick as vomiting may be dangerous. Do not induce vomiting unless directed to do so by medical personnel. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Get medical attention. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Most important symptoms/effects, acute and delayed

Potential acute health effects

Eye contact	No known significant effects or critical hazards.
Inhalation	No known significant effects or critical hazards.
Skin contact	May cause an allergic skin reaction.
Ingestion	No known significant effects or critical hazards.

Over-exposure signs/symptoms

Eye contact	No specific data.
Inhalation	No specific data.
Skin contact	Adverse symptoms may include the following: irritation redness
Ingestion	No specific data.

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physician	Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.
Specific treatments	No specific treatment.
Protection of first-aiders	No action shall be taken involving any personal risk or without suitable training. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

Section 4: First aid measures

See toxicological information (Section 11)

Section 5: Fire-fighting measures

Extinguishing media

Suitable extinguishing media	Use dry chemical, CO_2, water spray (fog) or foam.
Unsuitable extinguishing media	Do not use water jet.
Specific hazards arising from the chemical	Flammable liquid and vapor. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion. Runoff to sewer may create fire or explosion hazard.
Hazardous thermal decomposition products	Decomposition products may include the following materials: carbon dioxide carbon monoxide metal oxide/oxides
Special protective actions for fire-fighters	Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool.
Special protective equipment for fire-fighters	Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6: Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel	No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
For emergency responders	If specialized clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".
Environmental precautions	Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

Methods and materials for containment and cleaning up

Section 6: Accidental release measures

Small spill

Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.

Large spill

Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7: Handling and storage

Precautions for safe handling

Protective measures

Put on appropriate personal protective equipment (see Section 8). Persons with a history of skin sensitization problems should not be employed in any process in which this product is used. Avoid exposure - obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not get in eyes or on skin or clothing. Do not breathe vapor or mist. Do not ingest. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use only non-sparking tools. Take precautionary measures against electrostatic discharges. Empty containers retain product residue and can be hazardous. Do not reuse container.

Advice on general occupational hygiene

Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

Dry coat dust can be autoinflammable. Keep the paint wastes humides and work in water-trickeled cabins, to reduce the danger of autoinflammation.

Conditions for safe storage, including any incompatibilities

Store between the following temperatures: 15 to 25°C (59 to 77°F). Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Store locked up. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Section 8: Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
xylene	**ACGIH TLV (United States, 3/2016).** TWA: 100 ppm 8 hours. TWA: 434 mg/m³ 8 hours. STEL: 150 ppm 15 minutes. STEL: 651 mg/m³ 15 minutes. **OSHA PEL 1989 (United States, 3/1989).** TWA: 100 ppm 8 hours. TWA: 435 mg/m³ 8 hours. STEL: 150 ppm 15 minutes. Section 8: Exposure controls/personal protection

	STEL: 950 mg/m³ 15 minutes. **OSHA PEL (United States, 2/2013).** TWA: 150 ppm 8 hours. TWA: 710 mg/m³ 8 hours. **ACGIH TLV (United States, 3/2016).** STEL: 150 ppm 15 minutes. TWA: 50 ppm 8 hours.
Ethylbenzene	**ACGIH TLV (United States, 3/2016).** TWA: 20 ppm 8 hours. **OSHA PEL 1989 (United States, 3/1989).** TWA: 100 ppm 8 hours. TWA: 435 mg/m³ 8 hours. STEL: 125 ppm 15 minutes. STEL: 545 mg/m³ 15 minutes. **NIOSH REL (United States, 10/2013).** TWA: 100 ppm 10 hours. TWA: 435 mg/m³ 10 hours. STEL: 125 ppm 15 minutes. STEL: 545 mg/m³ 15 minutes. **OSHA PEL (United States, 2/2013).** TWA: 100 ppm 8 hours. TWA: 435 mg/m³ 8 hours.
2-methoxy-1-methylethyl acetate	**AIHA WEEL (United States, 10/2011).** TWA: 50 ppm 8 hours.
2-butanone oxime	**AIHA WEEL (United States, 10/2011). Skin sensitizer.** TWA: 10 ppm 8 hours.

Appropriate engineering controls

Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment.

Environmental exposure controls

Do not allow to enter drains or watercourses.

Individual protection measures

Hygiene measures

Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Contaminated work clothing should not be allowed out of the workplace. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Eye/face protection

Use safety eyewear designed to protect against splash of liquids.

Skin protection

Hand protection

Barrier creams may help to protect the exposed areas of the skin but should not be applied once exposure has occurred.

Section 8: Exposure controls/personal protection

	The user must check that the final choice of type of glove selected for handling this product is the most appropriate and takes into account the particular conditions of use, as included in the user's risk assessment. The instructions and information provided by the glove manufacturer on use, storage, maintenance and replacement must be followed. Gloves should be replaced regularly and if there is any sign of damage to the glove material. Barrier creams may help to protect the exposed areas of the skin but should not be applied once exposure has occurred. breakthrough time: 6 - 8h Butyl rubber gloves. Thickness of the glove material: 0.5 mm Nitrile gloves. Thickness of the glove material: 0.7 mm
Body protection	Personnel should wear antistatic clothing made of natural fibers or of high-temperature-resistant synthetic fibers.
Other skin protection	Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.
Respiratory protection	organic vapor (Type A) and particulate filter (Type P1); Fresh-air tube device (DIN EN 138)

Section 9: Physical and chemical properties

Appearance	
Physical state	Liquid.
Color	Gray.
Odor	Not available.
Odor threshold	Not available.
Melting point/freezing point	Not available.
Initial boiling point and boiling range	>70°C (>158°F)
Flash point	Closed cup: 73.4°F (23°C)
Method	Abel-Pensky.
Evaporation rate	Not available.
Flammability (solid, gas)	Not available.
Upper/lower flammability or explosive limits	Lower: 0.8%
Vapor pressure	Not available.
Vapor density	Not available.
Density	3.09 g/cm³
Method	DIN 53217
Solubility	Not available.
Solubility in water	Not available.
Partition coefficient: n-octanol/water	Not available.
Miscible in water.	No.
Auto-ignition temperature	Not available.

Section 9: Physical and chemical properties

Ignition temperature	> 200°C / > 390°F (solvent part)	
Decomposition temperature	Not available.	
Explosive properties	Not available.	
Oxidizing properties	Not available.	
Viscosity	45 to 55	sek 6 mm ISO 23°C
Solids content (by Weight)	87 %	

Aerosol product

No additional information.

Section 10: Stability and reactivity

Reactivity	No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	The product is stable.
Possibility of hazardous reactions	Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	Avoid all possible sources of ignition (spark or flame). Do not pressurize, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition.
Incompatible materials	Reactive or incompatible with the following materials: oxidizing materials
Hazardous decomposition products	Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Section 11: Toxicological information

Information on toxicological effects

Acute toxicity

Product/ingredient name	Result	Species	Dose	Exposure
xylene	LC50 Inhalation Gas.	Rat	5000 ppm	4 hours
	LD50 Oral	Rat	4300 mg/kg	-
n-Butyl acetate	LD50 Dermal	Rabbit	>17600 mg/kg	-
	LD50 Oral	Rat	10768 mg/kg	-
Ethylbenzene	LD50 Dermal	Rabbit	>5000 mg/kg	-
	LD50 Oral	Rat	3500 mg/kg	-
2-methoxy-1-methylethyl acetate	LD50 Dermal	Rabbit	>5 g/kg	-
	LD50 Oral	Rat	8532 mg/kg	-
2-butanone oxime	LD50 Oral	Rat	930 mg/kg	-

Irritation/Corrosion

Section 11: Toxicological information

Product/ingredient name	Result	Species	Score	Exposure	Observation
xylene	Eyes - Mild irritant	Rabbit	-	87 milligrams	-
	Eyes - Severe irritant	Rabbit	-	24 hours 5 milligrams	-
	Skin - Mild irritant	Rat	-	8 hours 60 microliters	-
	Skin - Moderate irritant	Rabbit	-	24 hours 500 milligrams	-
	Skin - Moderate irritant	Rabbit	-	100 Percent	-
zinc oxide	Eyes - Mild irritant	Rabbit	-	24 hours 500 milligrams	-

Solvent naphtha (petroleum), light arom.	Eyes - Mild irritant	Rabbit	-	24 hours 100 microliters	-
Ethylbenzene	Eyes - Severe irritant	Rabbit	-	500 milligrams	-
	Skin - Mild irritant	Rabbit	-	24 hours 15 milligrams	-
2-butanone oxime	Eyes - Severe irritant	Rabbit	-	100 microliters	-

Sensitization

Not available.

Mutagenicity

Not available.

Conclusion/Summary No known significant effects or critical hazards.

Carcinogenicity

Not available.

Conclusion/Summary No known significant effects or critical hazards.

Classification

Product/ingredient name	OSHA	IARC	NTP
xylene	-	3	-
Ethylbenzene	-	2B	-

Reproductive toxicity

Not available.

Conclusion/Summary No known significant effects or critical hazards.

Teratogenicity

Not available.

Conclusion/Summary No known significant effects or critical hazards.

Specific target organ toxicity (single exposure)

Section 11: Toxicological information

Name	Category	Route of exposure	Target organs
xylene	Category 3	Not applicable.	Respiratory tract irritation
Solvent naphtha (petroleum), light arom.	Category 3	Not applicable.	Respiratory tract irritation and Narcotic effects
Solvent naphtha (petroleum), light arom.	Category 3	Not applicable.	Respiratory tract irritation and Narcotic effects
n-Butyl acetate	Category 3	Not applicable.	Narcotic effects

Specific target organ toxicity (repeated exposure)

Name	Category	Route of exposure	Target organs
xylene	Category 2	Oral	Not determined
Ethylbenzene	Category 2	Not determined	hearing organs

Aspiration hazard

Name	Result
xylene	ASPIRATION HAZARD - Category 1
Solvent naphtha (petroleum), light arom.	ASPIRATION HAZARD - Category 1
Solvent naphtha (petroleum), light arom.	ASPIRATION HAZARD - Category 1
Ethylbenzene	ASPIRATION HAZARD - Category 1

Information on the likely routes of exposure Not available.

Potential acute health effects

Eye contact No known significant effects or critical hazards.

Inhalation No known significant effects or critical hazards.

Skin contact May cause an allergic skin reaction.

Ingestion No known significant effects or critical hazards.

Symptoms related to the physical, chemical and toxicological characteristics

Eye contact No specific data.

Inhalation No specific data.

Skin contact Adverse symptoms may include the following:
irritation
redness

Ingestion No specific data.

Delayed and immediate effects and also chronic effects from short and long term exposure

Short term exposure

Section 11: Toxicological information

Potential immediate effects Not available.

Potential delayed effects Not available.

Long term exposure

Potential immediate effects Not available.

Potential delayed effects Not available.

Potential chronic health effects

Not available.

General May cause damage to organs through prolonged or repeated exposure. Once sensitized, a severe allergic reaction may occur when subsequently exposed to very low levels.

Carcinogenicity Suspected of causing cancer. Risk of cancer depends on duration and level of exposure.

Mutagenicity No known significant effects or critical hazards.

Teratogenicity No known significant effects or critical hazards.

Developmental effects No known significant effects or critical hazards.

Fertility effects No known significant effects or critical hazards.

Numerical measures of toxicity

Acute toxicity estimates

Route	ATE value
Oral	2980.8 mg/kg
Dermal	21905.2 mg/kg
Inhalation (gases)	139815 ppm
Inhalation (vapors)	869.3 mg/l

Section 12: Ecological information

Toxicity

Product/ingredient name	Result	Species	Exposure
n-Butyl acetate	Acute LC50 32 mg/l Marine water	Crustaceans - Artemia salina	48 hours
	Acute LC50 18000 µg/l Fresh water	Fish - Pimephales promelas	96 hours
Ethylbenzene	Acute EC50 4600 µg/l Fresh water	Algae - Pseudokirchneriella subcapitata	72 hours
	Acute EC50 3600 µg/l Fresh water	Algae - Pseudokirchneriella subcapitata	96 hours

Persistence and degradability

Product/ingredient name	Aquatic half-life	Photolysis	Biodegradability
Solvent naphtha (petroleum), light arom.	-	-	Readily

Bioaccumulative potential

Product/ingredient name	$LogP_{ow}$	BCF	Potential
xylene	3.16	-	low
zinc oxide	-	60960	high
Solvent naphtha (petroleum), light arom.	-	10 to 2500	high
n-Butyl acetate	1.78	-	low
Ethylbenzene	3.15	15	low
2-methoxy-1-methylethyl acetate	0.56	-	low
2-butanone oxime	0.63	5.011872336	low

Mobility in soil

Soil/water partition coefficient (K_{OC}) Not available.

Other adverse effects No known significant effects or critical hazards.

Section 13: Disposal considerations

Disposal methods The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Vapor from product residues may create a highly flammable or explosive atmosphere inside the container. Do not cut, weld or grind used containers unless they have been cleaned thoroughly internally. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

Craig,

It would have a very small amount, probably <0.25%

Do you need an exact number? If so, it will take a day or two to get that number.

Let me know.

Hi Lee,
For the core wash used at Fritz Winter, can you tell me if the attached has any VOCs associated with the material. Thanks.

Volatile HAPS	**[lb/gal] of solids**	5.24
Volatile HAPS	**(lb/lb) of solids**	0

VOC content

Total	With volume exclusion [water excluded]	3.42 lbs/gal (409.8 g/l)
	With volume exclusion [water not excluded]	3.42 lbs/gal (409.8 g/l)
[lb/gal] of solids	0	
(lb/lb) of solids	1	

Waste disposal

Waste disposal should be in accordance with applicable federal, state, and local laws. The appropriate method (s) of disposal depend(s) on the product composition at the time of disposal.

The environmental information contained in this product data sheet is based upon Worwag Coatings research and is believed to be reliable, but such information does not constitute a warranty either expressed or implied. As with any coatings material, care and required safety equipment should be utilized when using this product. Keep container tightly sealed and comply with all local safety regulations regarding its transportation, use and storage. The addition of reducers and/or other additives to this product may substantially alter the above data. Refer to the Safety Data Sheet for additional Health, Safety and Environmental information. (Method 24/calculation method was used for this EDS)

SAFETY DATA SHEET

Section 1: Product and company identification

Product code WT102682

Product name REDUCER

Validation date 20. September 2017

Relevant identified uses of the substance or mixture and uses advised against

Material uses Thinner for synthetic resin based coatings for industrial coating of metal and/or plastic material.

Supplier's details

Worwag Coatings LLC
3420 Kossuth ST
Lafayette, IN 47905
USA
Tel .: (765) 448-9681

Emergency telephone number (with hours of operation) Chemtrec 800-424-9300 (24h)

Section 2: Hazards identification

OSHA/HCS status This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).

GHS Classification

Classification of the substance or mixture

SKIN CORROSION/IRRITATION - Category 2
SERIOUS EYE DAMAGE/ EYE IRRITATION - Category 1
CARCINOGENICITY - Category 2
SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE) (Respiratory tract irritation) - Category 3
SPECIFIC TARGET ORGAN TOXICITY (SINGLE EXPOSURE) (Narcotic effects) - Category 3
SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) (hearing organs) - Category 2
ASPIRATION HAZARD - Category 1

GHS label elements

Hazard pictograms

Signal word Danger

Section 2: Hazards identification

Hazard statements

H318 - Causes serious eye damage.
H315 - Causes skin irritation.
H351 - Suspected of causing cancer.
H304 - May be fatal if swallowed and enters airways.
H335 - May cause respiratory irritation.
H336 - May cause drowsiness and dizziness.
H373 - May cause damage to organs through prolonged or repeated exposure. (hearing organs)

Precautionary statements

General

Not applicable.

Prevention

P201 - Obtain special instructions before use.
P202 - Do not handle until all safety precautions have been read and understood.
P280 - Wear protective gloves. Wear eye or face protection. Wear protective clothing.
P271 - Use only outdoors or in a well-ventilated area.
P260 - Do not breathe vapor.
P264 - Wash hands thoroughly after handling.

Response

P314 - Get medical attention if you feel unwell.
P308 + P313 - IF exposed or concerned: Get medical attention.
P304 + P340 + P312 - IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or physician if you feel unwell.
P301 + P310 + P331 - IF SWALLOWED: Immediately call a POISON CENTER or physician. Do NOT induce vomiting.
P302 + P352 + P362+P364 - IF ON SKIN: Wash with plenty of soap and water. Take off contaminated clothing and wash it before reuse.
P332 + P313 - If skin irritation occurs: Get medical attention.
P305 + P351 + P338 + P310 - IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Immediately call a POISON CENTER or physician.

Storage

P405 - Store locked up.

Disposal

P501 - Dispose of contents and container in accordance with all local, regional, national and international regulations.

Hazards not otherwise classified

None known.

See toxicological information (Section 11)

Section 3: Composition/information on ingredients

Substance/mixture Mixture

Ingredient name	%	CAS number
n-Butyl acetate	≥50 - <75	123-86-4
Solvent naphtha (petroleum), light arom.	≥10 - <25	64742-95-6
1,2,4-trimethylbenzene	≥10 - <25	95-63-6
butan-1-ol	≥5 - <10	71-36-3
xylene	≥5 - <10	1330-20-7
Mesitylene	≥3 - <5	108-67-8
Ethylbenzene	≥3 - <5	100-41-4
Cumene	≥0.3 - <1	98-82-8

Any concentration shown as a range is to protect confidentiality or is due to batch variation.

Section 3: Composition/information on ingredients

There are no additional ingredients present which, within the current knowledge of the supplier and in the concentrations applicable, are classified as hazardous to health or the environment and hence require reporting in this section.

Occupational exposure limits, if available, are listed in Section 8.

Section 4: First aid measures

Description of necessary first aid measures

Eye contact

Get medical attention immediately. Call a poison center or physician. Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Chemical burns must be treated promptly by a physician.

Inhalation

Get medical attention immediately. Call a poison center or physician. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Skin contact

Get medical attention immediately. Call a poison center or physician. Flush contaminated skin with plenty of water. Remove contaminated clothing and shoes. Wash contaminated clothing thoroughly with water before removing it, or wear gloves. Continue to rinse for at least 10 minutes. Chemical burns must be treated promptly by a physician. Wash clothing before reuse. Clean shoes thoroughly before reuse.

Ingestion

Get medical attention immediately. Call a poison center or physician. Wash out mouth with water. Remove dentures if any. Remove victim to fresh air and keep at rest in a position comfortable for breathing. If material has been swallowed and the exposed person is conscious, give small quantities of water to drink. Stop if the exposed person feels sick as vomiting may be dangerous. Aspiration hazard if swallowed. Can enter lungs and cause damage. Do not induce vomiting. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Chemical burns must be treated promptly by a physician. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Most important symptoms/effects, acute and delayed

Potential acute health effects

Eye contact

Causes serious eye damage.

Inhalation

Can cause central nervous system (CNS) depression. May cause drowsiness and dizziness. May cause respiratory irritation.

Skin contact

Causes skin irritation.

Ingestion

Can cause central nervous system (CNS) depression. May be fatal if swallowed and enters airways.

Over-exposure signs/symptoms

Section 4: First aid measures

Eye contact	Adverse symptoms may include the following: pain watering redness
Inhalation	Adverse symptoms may include the following: respiratory tract irritation coughing nausea or vomiting headache drowsiness/fatigue dizziness/vertigo unconsciousness
Skin contact	Adverse symptoms may include the following: pain or irritation redness blistering may occur
Ingestion	Adverse symptoms may include the following: stomach pains nausea or vomiting

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physician	Treat symptomatically. Contact poison treatment specialist immediately if large quantities have been ingested or inhaled.
Specific treatments	No specific treatment.
Protection of first-aiders	No action shall be taken involving any personal risk or without suitable training. If it is suspected that fumes are still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Wash contaminated clothing thoroughly with water before removing it, or wear gloves.

See toxicological information (Section 11)

Section 5: Fire-fighting measures

Extinguishing media

Suitable extinguishing media	Use an extinguishing agent suitable for the surrounding fire.
Unsuitable extinguishing media	None known.
Specific hazards arising from the chemical	In a fire or if heated, a pressure increase will occur and the container may burst.
Hazardous thermal decomposition products	Decomposition products may include the following materials: carbon dioxide carbon monoxide

Section 5: Fire-fighting measures

Special protective actions for fire-fighters	Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training.
Special protective equipment for fire-fighters	Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6: Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel	No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Do not breathe vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.
For emergency responders	If specialised clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".
Environmental precautions	Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

Methods and materials for containment and cleaning up

Small spill	Stop leak if without risk. Move containers from spill area. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.
Large spill	Stop leak if without risk. Move containers from spill area. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7: Handling and storage

Precautions for safe handling

Protective measures	Put on appropriate personal protective equipment (see Section 8). Avoid exposure - obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not get in eyes or on skin or clothing. Do not breathe vapor or mist. Do not swallow. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Empty containers retain product residue and can be hazardous. Do not reuse container.

Section 7: Handling and storage

Advice on general occupational hygiene

Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

Dry coat dust can be autoinflammable. Keep the paint wastes humides and work in water-trickeled cabins, to reduce the danger of autoinflammation.

Conditions for safe storage, including any incompatibilities

Store between the following temperatures: 5 to 30°C (41 to 86°F). Store in accordance with local regulations. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Store locked up. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Section 8: Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
n-Butyl acetate	**OSHA PEL 1989 (United States, 3/1989).** TWA: 150 ppm 8 hours. TWA: 710 mg/m³ 8 hours. STEL: 200 ppm 15 minutes. STEL: 950 mg/m³ 15 minutes. **NIOSH REL (United States, 10/2013).** TWA: 150 ppm 10 hours. TWA: 710 mg/m³ 10 hours. STEL: 200 ppm 15 minutes. STEL: 950 mg/m³ 15 minutes. **OSHA PEL (United States, 2/2013).** TWA: 150 ppm 8 hours. TWA: 710 mg/m³ 8 hours. **ACGIH TLV (United States, 3/2016).** STEL: 150 ppm 15 minutes. TWA: 50 ppm 8 hours.
Solvent naphtha (petroleum), light arom.	None.
1,2,4-trimethylbenzene	**ACGIH TLV (United States, 3/2016).** TWA: 25 ppm 8 hours. TWA: 123 mg/m³ 8 hours. **OSHA PEL 1989 (United States, 3/1989).** TWA: 25 ppm 8 hours. TWA: 125 mg/m³ 8 hours. **NIOSH REL (United States, 10/2013).** TWA: 25 ppm 10 hours. TWA: 125 mg/m³ 10 hours.
butan-1-ol	**ACGIH TLV (United States, 3/2016).** TWA: 20 ppm 8 hours.

Section 8: Exposure controls/personal protection

xylene	**OSHA PEL 1989 (United States, 3/1989).** **Absorbed through skin.** CEIL: 50 ppm CEIL: 150 mg/m³ **NIOSH REL (United States, 10/2013).** **Absorbed through skin.** CEIL: 50 ppm CEIL: 150 mg/m³ **OSHA PEL (United States, 2/2013).** TWA: 100 ppm 8 hours. TWA: 300 mg/m³ 8 hours. **ACGIH TLV (United States, 3/2016).** TWA: 100 ppm 8 hours. TWA: 434 mg/m³ 8 hours. STEL: 150 ppm 15 minutes. STEL: 651 mg/m³ 15 minutes. **OSHA PEL 1989 (United States, 3/1989).** TWA: 100 ppm 8 hours. TWA: 435 mg/m³ 8 hours. STEL: 150 ppm 15 minutes. STEL: 655 mg/m³ 15 minutes. **OSHA PEL (United States, 2/2013).** TWA: 100 ppm 8 hours. TWA: 435 mg/m³ 8 hours.
Mesitylene	**ACGIH TLV (United States, 3/2016).** TWA: 25 ppm 8 hours. TWA: 123 mg/m³ 8 hours. **OSHA PEL 1989 (United States, 3/1989).** TWA: 25 ppm 8 hours. TWA: 125 mg/m³ 8 hours. **NIOSH REL (United States, 10/2013).** TWA: 25 ppm 10 hours. TWA: 125 mg/m³ 10 hours.
Ethylbenzene	**ACGIH TLV (United States, 3/2016).** TWA: 20 ppm 8 hours. **OSHA PEL 1989 (United States, 3/1989).** TWA: 100 ppm 8 hours. TWA: 435 mg/m³ 8 hours. STEL: 125 ppm 15 minutes. STEL: 545 mg/m³ 15 minutes. **NIOSH REL (United States, 10/2013).** TWA: 100 ppm 10 hours. TWA: 435 mg/m³ 10 hours. STEL: 125 ppm 15 minutes. STEL: 545 mg/m³ 15 minutes. **OSHA PEL (United States, 2/2013).** TWA: 100 ppm 8 hours. TWA: 435 mg/m³ 8 hours.
Cumene	**OSHA PEL 1989 (United States, 3/1989).** **Absorbed through skin.** TWA: 50 ppm 8 hours.

Section 8: Exposure controls/personal protection

	TWA: 245 mg/m³ 8 hours. **NIOSH REL (United States, 10/2013).** **Absorbed through skin.** TWA: 50 ppm 10 hours. TWA: 245 mg/m³ 10 hours. **ACGIH TLV (United States, 3/2016).** TWA: 50 ppm 8 hours. **OSHA PEL (United States, 2/2013).** **Absorbed through skin.** TWA: 50 ppm 8 hours. TWA: 245 mg/m³ 8 hours.

Appropriate engineering controls Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits.

Environmental exposure controls Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, fume scrubbers, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Consult local authorities for acceptable exposure limits.

Individual protection measures

Hygiene measures Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Eye/face protection Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: chemical splash goggles and/ or face shield. If inhalation hazards exist, a full-face respirator may be required instead.

Skin protection

Hand protection Chemical-resistant, impervious gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers. In the case of mixtures, consisting of several substances, the protection time of the gloves cannot be accurately estimated.

Body protection Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Other skin protection Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Section 8: Exposure controls/personal protection

Respiratory protection	Use a properly fitted, air-purifying or air-fed respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9: Physical and chemical properties

Appearance

Physical state	Liquid.
Color	Colorless.
Odor	Not available.
Odor threshold	Not available.
Melting point	Not available.
Boiling point	>70°C (>158°F)
Flash point	Closed cup: 212°F (100°C)
Method	Abel-Pensky.
Evaporation rate	Not available.
Flammability (solid, gas)	Not available.
Upper/lower flammability or explosive limits	Lower: 0.8%
Ignition temperature	> 200°C / > 390°F (solvent part)
Vapor pressure	Not available.
Vapor density	Not available.
Density	0.87 g/cm³
Method	DIN 53217
Solubility	Not available.
Miscible in water.	No.
Partition coefficient: n-octanol/water	Not available.
Solids content (by Weight)	0 %
Auto-ignition temperature	Not available.
Decomposition temperature	Not available.
Viscosity	Not available.

Section 10: Stability and reactivity

Reactivity	No specific test data related to reactivity available for this product or its ingredients.
Chemical stability	The product is stable.
Possibility of hazardous reactions	Under normal conditions of storage and use, hazardous reactions will not occur.

Section 10: Stability and reactivity

Conditions to avoid No specific data.

Incompatible materials No specific data.

Hazardous decomposition products Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Section 11: Toxicological information

Information on toxicological effects

Acute toxicity

Product/ingredient name	Result	Species	Dose	Exposure
n-Butyl acetate	LD50 Dermal	Rabbit	>17600 mg/kg	-
	LD50 Oral	Rat	10768 mg/kg	-
1,2,4-trimethylbenzene	LC50 Inhalation Vapor	Rat	18000 mg/m³	4 hours
	LD50 Oral	Rat	5 g/kg	-
butan-1-ol	LC50 Inhalation Vapor	Rat	24000 mg/m³	4 hours

	Skin - Mild irritant	Rabbit	-	24 hours 10 milligrams	-
	Skin - Moderate irritant	Rabbit	-	24 hours 100 milligrams	-

Sensitization

Not available.

Mutagenicity

Not available.

Conclusion/Summary No known significant effects or critical hazards.

Carcinogenicity

Not available.

Conclusion/Summary No known significant effects or critical hazards.

Classification

Product/ingredient name	OSHA	IARC	NTP
xylene	-	3	-
Ethylbenzene	-	2B	-
Cumene	-	2B	Reasonably anticipated to be a human carcinogen.

Reproductive toxicity

Not available.

Conclusion/Summary No known significant effects or critical hazards.

Teratogenicity

Not available.

Conclusion/Summary No known significant effects or critical hazards.

Specific target organ toxicity (single exposure)

Name	Category	Route of exposure	Target organs
n-Butyl acetate	Category 3	Not applicable.	Narcotic effects
Solvent naphtha (petroleum), light arom.	Category 3	Not applicable.	Respiratory tract irritation and Narcotic effects
1,2,4-trimethylbenzene	Category 3	Not applicable.	Respiratory tract irritation
butan-1-ol	Category 3	Not applicable.	Respiratory tract irritation and Narcotic effects

Section 11: Toxicological information

xylene	Category 3	Not applicable.	Respiratory tract irritation
Mesitylene	Category 3	Not applicable.	Respiratory tract irritation
Cumene	Category 3	Not applicable.	Respiratory tract irritation

Specific target organ toxicity (repeated exposure)

Name	Category	Route of exposure	Target organs
xylene	Category 2	Oral	Not determined
Ethylbenzene	Category 2	Not determined	hearing organs

Aspiration hazard

Name	Result
Solvent naphtha (petroleum), light arom.	ASPIRATION HAZARD - Category 1
1,2,4-trimethylbenzene	ASPIRATION HAZARD - Category 1
xylene	ASPIRATION HAZARD - Category 1
Ethylbenzene	ASPIRATION HAZARD - Category 1
Cumene	ASPIRATION HAZARD - Category 1

Information on the likely routes of exposure Not available.

Potential acute health effects

Eye contact Causes serious eye damage.

Inhalation Can cause central nervous system (CNS) depression. May cause drowsiness and dizziness. May cause respiratory irritation.

Skin contact Causes skin irritation.

Ingestion Can cause central nervous system (CNS) depression. May be fatal if swallowed and enters airways.

Symptoms related to the physical, chemical and toxicological characteristics

Eye contact Adverse symptoms may include the following:
pain
watering
redness

Inhalation Adverse symptoms may include the following:
respiratory tract irritation
coughing
nausea or vomiting
headache
drowsiness/fatigue
dizziness/vertigo
unconsciousness

Section 11: Toxicological information

Skin contact	Adverse symptoms may include the following: pain or irritation redness blistering may occur
Ingestion	Adverse symptoms may include the following: stomach pains nausea or vomiting

Delayed and immediate effects and also chronic effects from short and long term exposure

Short term exposure

Potential immediate effects	Not available.
Potential delayed effects	Not available.

Long term exposure

Potential immediate effects	Not available.
Potential delayed effects	Not available.

Potential chronic health effects

Not available.

General	May cause damage to organs through prolonged or repeated exposure.
Carcinogenicity	Suspected of causing cancer. Risk of cancer depends on duration and level of exposure.
Mutagenicity	No known significant effects or critical hazards.
Teratogenicity	No known significant effects or critical hazards.
Developmental effects	No known significant effects or critical hazards.
Fertility effects	No known significant effects or critical hazards.

Numerical measures of toxicity

Acute toxicity estimates

Route	ATE value
Oral	4931.7 mg/kg
Dermal	6917.2 mg/kg
Inhalation (gases)	90930.1 ppm
Inhalation (vapors)	114.5 mg/l

Section 12: Ecological information

Ecotoxicity No known significant effects or critical hazards.

Toxicity

Product/ingredient name	Result	Species	Exposure
n-Butyl acetate	Acute LC50 32 mg/l Marine water	Crustaceans - Artemia salina	48 hours
	Acute LC50 18000 µg/l Fresh water	Fish - Pimephales promelas	96 hours
Ethylbenzene	Acute EC50 4600 µg/l Fresh water	Algae - Pseudokirchneriella subcapitata	72 hours
	Acute EC50 3600 µg/l Fresh water	Algae - Pseudokirchneriella subcapitata	96 hours
	Acute EC50 6530 µg/l Fresh water	Crustaceans - Artemia sp. - Nauplii	48 hours
	Acute EC50 2930 µg/l Fresh water	Daphnia - Daphnia magna - Neonate	48 hours
	Acute LC50 4200 µg/l Fresh water	Fish - Oncorhynchus mykiss	96 hours
Cumene	Acute EC50 2600 µg/l Fresh water	Algae - Pseudokirchneriella subcapitata	72 hours
	Acute EC50 7400 µg/l Fresh water	Crustaceans - Artemia sp. - Nauplii	48 hours
	Acute EC50 10600 µg/l Fresh water	Daphnia - Daphnia magna - Neonate	48 hours

Cumene	3.66	94.69	low

Mobility in soil

Soil/water partition coefficient (K_{OC}) Not available.

Other adverse effects No known significant effects or critical hazards.

Section 13: Disposal considerations

Disposal methods

The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. Incineration or landfill should only be considered when recycling is not feasible. This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

United States - RCRA Toxic hazardous waste "U" List

Ingredient	CAS #	Status	Reference number
Xylene	1330-20-7	Listed	U239
1-Butanol (I); n-Butyl alcohol (I)	71-36-3	Listed	U031

Disposal should be in accordance with applicable regional, national and local laws and regulations.

Refer to Section 7: HANDLING AND STORAGE and Section 8: EXPOSURE CONTROLS/PERSONAL PROTECTION for additional handling information and protection of employees.

Section 14: Transport information

Environmental hazards	No.	Yes.	Yes.	Yes.	Yes.	Yes.
Additional information	**Reportable quantity** 1818.6 lbs / 825.65 kg [250.7 gal / 949.02 L] The classification of the product is due solely to the presence of one or more US DOT-listed 'Hazardous substances' that are subject to reportable quantity requirements and only applies to shipments of packages greater than, or equal to, the product reportable quantity. Package sizes less than the product reportable quantity are not regulated as hazardous materials.	Product classified as per the following sections of the Transportation of Dangerous Goods Regulations: 2.43-2.45 (Class 9), 2.7 (Marine pollutant mark). Non-bulk packages of this product are not regulated as dangerous goods when transported by road or rail.	The environmentally hazardous substance mark is not required when transported in sizes of ≤5 L or ≤5 kg.	This product is not regulated as a dangerous good when transported in sizes of ≤5 L or ≤5 kg, provided the packagings meet the general provisions of 4.1.1.1, 4.1.1.2 and 4.1.1.4 to 4.1.1.8. **Tunnel code** (E)	This product is not regulated as a dangerous good when transported in sizes of ≤5 L or ≤5 kg, provided the packagings meet the general provisions of 4.1.1.1, 4.1.1.2 and 4.1.1.4 to 4.1.1.8.	This product is not regulated as a dangerous good when transported in sizes of ≤5 L or ≤5 kg, provided the packagings meet the general provisions of 5.0.2.4.1, 5.0.2.6.1.1 and 5.0.2.8.

Special precautions for user

Transport within user's premises: always transport in closed containers that are upright and secure. Ensure that persons transporting the product know what to do in the event of an accident or spillage.

Transport in bulk according to Annex II of MARPOL and the IBC Code

Not available.

Hazardous Material Information System (U.S.A.)

Health	*	2
Flammability		1
Physical hazards		0

Caution: HMIS® ratings are based on a 0-4 rating scale, with 0 representing minimal hazards or risks, and 4 representing significant hazards or risks Although HMIS® ratings are not required on SDSs under 29 CFR 1910. 1200, the preparer may choose to provide them. HMIS® ratings are to be used with a fully implemented HMIS® program. HMIS® is a registered mark of the National Paint & Coatings Association (NPCA). HMIS® materials may be purchased exclusively from J. J. Keller (800) 327-6868.

The customer is responsible for determining the PPE code for this material.

The technical information contained in this product data sheet and suggestions with reference to its application is based upon Worwag Coatings research and are believed to be reliable, but such information do not constitute a warranty either expressed or implied. As with any coatings material care and required safety equipment should be utilized when using this product. Avoid any contact with skin or eyes. Adequate ventilation should be provided. Keep away from heat, sparks or flames. Keep container tightly sealed and comply with all local safety regulations regarding its transportation, use and storage. Refer to Material Safety Data Sheet (MSDS) for additional Health, Safety and Environmental information.

1 IDENTIFICATION

Product Name:	**GEOMET® 360**
Product Code(s):	GMT1196

2 HAZARDS IDENTIFICATION

Signal Word: **DANGER**

HAZARD CLASSIFICATION

Germ Cell Mutagenicity	Category 1B
Toxic to Reproduction	Category 1B
Specific Target Organ Toxicity (SE)	Category 2
Eye Damage/ Irritation	Category 2A

HAZARD STATEMENTS

H319	Causes serious eye irritation.
H340	May cause genetic defects.
H360	May damage fertility or the unborn child.
H371	May cause damage to organs.

PRECAUTIONARY STATEMENTS

PREVENTION

P201	Obtain special instructions before use.
P202	Do not handle until all safety precautions have been read and understood.
P260	Do not breathe fumes, mist, vapors or spray.
P264	Wash hands thoroughly after handling.
P270	Do not eat, drink or smoke when using this product.
P280	Wear protective gloves and eye/face protection.

RESPONSE

P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
P308+P313	IF exposed or concerned: Get medical attention.
P337+P313	If eye irritation persists: Get medical attention.

STORAGE

P405	Store locked up.

DISPOSAL

P501	Dispose of contents and container in accordance with all applicable regulations.

3 COMPOSITION / INFORMATION ON INGREDIENTS

Product is a mixture of the substances listed below with nonhazardous additions.

COMPONENT	CAS NUMBER	WEIGHT %
Zinc Powder (stabilized)	7440-66-6	20 – 30
Aluminum Powder (stabilized)	7429-90-5	6 – 11
Methanol	67-56-1	< 4
Distillates (petroleum), hydrotreated light	64742-47-8	< 2
Naphtha (petroleum), hydrotreated heavy	64742-48-9	< 2
Boric Acid	10043-35-3	< 1
Solvent naphtha (petroleum), light aromatic	64742-95-6	< 1

Any concentration shown as a range is to protect product confidentiality or is due to batch variation.

In accordance with paragraph (i) of §1910.1200, specific chemical identities and exact concentration of composition of this product have been withheld as a trade secret.

4 FIRST-AID MEASURES

Eyes:	Flush immediately with plenty of clean, lukewarm water for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing.
Skin:	Generally, this product does not irritate the skin.
Inhalation:	If overcome by exposure, remove victim to fresh air immediately. Consult doctor if irritation occurs.
Ingestion:	Do not induce vomiting. If affected person is fully conscious, wash out mouth with water and give 2-3 glasses of water to drink. Consult doctor if irritation occurs.

5 FIRE-FIGHTING MEASURES

Suitable Extinguishing Media:	Extinguishing powder, CO_2, water spray or alcohol resistant foam.
Unsuitable Extinguishing Media:	No further relevant information available.
Special Procedures:	No special measures required.
Hazardous Combustion Products:	No further relevant information available.

6 ACCIDENTAL RELEASE MEASURES

Precautions:	Use appropriate protective equipment. Keep unprotected persons away.
Environmental:	Do not allow to enter sewers/ surface or ground water.
Containment:	Absorb with liquid-binding material (sand, dolomite, universal binders, or sawdust). Use neutralizing agent. Ensure adequate ventilation. Do not flush with water or aqueous agents.
Waste Disposal:	Dispose of collected material in compliance with local, state and federal regulations.

7 HANDLING AND STORAGE

Storage:	Store in a cool, dry, well-ventilated area. Avoid exposure to excessive heat for long periods of time. Avoid direct sunlight.
Handling:	Ensure good ventilation/ exhaustion at the workplace. Open and handle receptacle with care. Prevent formation of aerosols.

8 EXPOSURE CONTROLS / PERSONAL PROTECTION

EXPOSURE LIMITS

COMPONENT	TYPE	VALUE
Methanol (CAS# 67-56-1)	OSHA PEL NIOSH REL ACGIH TLV	TWA: 260 mg/m^3 (200 ppm) TWA: 260 mg/m^3 (200 ppm) ST: 325 mg/m^3 (250 ppm) TWA: 262 mg/m^3 (200 ppm) ST: 328 mg/m^3 (250 ppm)
Boric Acid (CAS# 10043-35-3)	ACGIH TLV	TWA: 3 mg/m^3 ST: 6 mg/m^3

EXPOSURE CONTROLS

Ventilation & Engineering Measures:	Use ventilation if possible, e.g., fans or exhaust systems, to keep vapor levels below recommended exposure limits.
Respiratory Protection:	If adequate ventilation is not available, wear a NIOSH-approved respirator for protection against fumes, vapors, mists and spray.
Eye Protection:	Wear safety goggles or safety glasses with unperforated side shields and a face shield.
Skin Protection:	Wear chemical resistant gloves and long sleeves to minimize skin exposure. Contaminated clothing, including shoes, should be stored separately, and cleaned before reusing.
Other:	Do not eat or drink in area where product is used. Wash hands after handling.

9 PHYSICAL AND CHEMICAL PROPERTIES

Appearance:	Metallic grey liquid.
Odor:	N/D
Odor Threshold:	N/D
Boiling Point:	100°C (212°F)
Melting Point/Freezing point:	N/A
Vapor Pressure (mm of Hg @ 20˚C):	N/D
Vapor Density (AIR=1):	N/D
Relative Density:	N/D
Specific Gravity (Water=1):	1.3 – 1.4
pH:	6 – 9
Solubility in Water:	N/A
Evaporation Rate (n-Butyl Acetate=1):	Equal to water.
Viscosity:	N/D
Partition Coefficient (n-octanol/water):	N/D
Decomposition Temperature:	N/D
Flashpoint:	101°F (PMCC) (Does NOT sustain combustion per ASTM 4206)
Auto-ignition Temperature:	N/A
Flammability Limits	
UFL (% by volume):	N/A
LFL (% by volume):	N/A

10 STABILITY AND REACTIVITY

Chemical Stability:	Stable under normal conditions.
Conditions to Avoid:	Isolate from extreme heat and cold.
Incompatible Materials:	No further relevant information available.
Hazardous Decomposition Products:	No dangerous decomposition products known.
Hazardous Polymerization:	Will not occur under normal conditions.

11 TOXICOLOGICAL INFORMATION

Routes of Exposure: Eye/Skin contact, inhalation and ingestion.

ACUTE HEALTH HAZARDS

Eyes:	Exposure to eyes will cause serious irritation.
Skin:	No irritant effect.
Inhalation:	Prolonged exposure can cause inheritable damage.

INFORMATION ON TOXICOLOGICAL EFFECTS

Serious Eye Damage/Irritation:	Causes serious eye damage.
Respiratory/Skin Sensitization:	No sensitizing effects known.
Germ Cell Mutagenicity:	May cause genetic defects.
Reproductive Toxicity:	May damage fertility or the unborn child.
Specific Organ Toxicity:	May cause damage to organs.

COMPONENT ACUTE TOXICOLOGICAL INFORMATION

COMPONENT	TEST	SPECIES	RESULT
Methanol (CAS# 67-56-1)	Oral LD_{50} Dermal LD_{50}	Rat Rabbit	5628 mg/kg 15800 mg/kg
Nonylphenol, Ethoxylated (CAS# 9016-45-9)	Oral LD_{50} Dermal LD_{50} Inhalative LC_{50}/4 h	Rat Rabbit Rat	>4290 mg/kg 2500 mg/kg >21.3 mg/l
Boric Acid (CAS# 10043-35-3)	Oral LD_{50}	Rat	2660 mg/kg
Naphtha (petroleum), hydrotreated heavy (CAS# 64742-48-9)	Oral LD_{50} Dermal LD_{50}	Rat Rabbit	>5000 mg/kg >3000 mg/kg
Solvent Naphtha, light aromatic (CAS# 64742-95-6)	Oral LD_{50} Dermal LD_{50} Inhalative LC_{50}/4 h	Rat Rabbit Rat	>6800 mg/kg >3400 mg/kg >10.2 mg/l

Information is based on data from components or similar materials.

12 ECOLOGICAL INFORMATION

Ecological effects of this product mixture have not been tested.

13 DISPOSAL CONSIDERATIONS

Waste Disposal:	Dispose of in accordance with federal, state, and local regulations. The generation of waste should be avoided or minimized whenever possible. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Do not flush to drain/storm sewer.
Packaging Disposal:	Empty containers should be taken to a licensed waste handling site for recycling or disposal, since emptied containers may contain product residue. Do not cut, weld or grind used containers unless they have been cleaned thoroughly internally. Follow all label warnings even after containers are emptied.

14 TRANSPORT INFORMATION

UN Number:	UN3082
Shipping Name:	
DOT:	Not Regulated.
IMDG:	ENVIRONMENTALLY HAZARDOUS SUBSTANCE, LIQUID, N.O.S. (ZINC, ETHOXYLATED NONYLPHENOL), MARINE POLLUTANT
IATA:	Environmentally hazardous substance, liquid, n.o.s. (Zinc, Ethoxylated Nonylphenol)
Packing Group:	III
Hazard Class:	9 Miscellaneous dangerous substances and articles.

Water

Safety Data Sheet

according to Federal Register / Vol. 77, No. 58 / Monday, March 26, 2012 / Rules and Regulations

Date of issue: 11/15/2013 Revision date: 06/12/2018 Supersedes: 01/25/2017 Version: 1.3

SECTION 1: Identification

1.1. Identification

Product form : Substance

Substance name : Water

CAS-No. : 7732-18-5

Product code : LC26750

Formula : H2O

1.2. Recommended use and restrictions on use

Use of the substance/mixture : For laboratory and manufacturing use only.

Recommended use : Laboratory chemicals

Restrictions on use : Not for food, drug or household use

1.3. Supplier

LabChem Inc
Jackson's Pointe Commerce Park Building 1000, 1010 Jackson's Pointe Court
Zelienople, PA 16063 - USA
T 412-826-5230 - F 724-473-0647
info@labchem.com - www.labchem.com

1.4. Emergency telephone number

Emergency number : CHEMTREC: 1-800-424-9300 or +1-703-741-5970

SECTION 2: Hazard(s) identification

2.1. Classification of the substance or mixture

GHS-US classification

Not classified

2.2. GHS Label elements, including precautionary statements

Not classified as a hazardous chemical.

Other hazards not contributing to the classification : None.

2.4. Unknown acute toxicity (GHS US)

Not applicable

SECTION 3: Composition/Information on ingredients

3.1. Substances

Substance type : Mono-constituent

Name	Product identifier	%	GHS-US classification
Water (Main constituent)	(CAS-No.) 7732-18-5	100	Not classified

Full text of hazard classes and H-statements : see section 16

3.2. Mixtures

Not applicable

SECTION 4: First-aid measures

4.1. Description of first aid measures

First-aid measures general : If you feel unwell, seek medical advice (show the label where possible).

First-aid measures after inhalation : Allow victim to breathe fresh air. Allow the victim to rest. Adverse effects not expected from this product.

First-aid measures after skin contact : Adverse effects not expected from this product. Take off contaminated clothing.

First-aid measures after eye contact : Adverse effects not expected from this product.

First-aid measures after ingestion : Do NOT induce vomiting. Adverse effects not expected from this product.

4.2. Most important symptoms and effects (acute and delayed)

Symptoms/effects : Not expected to present a significant hazard under anticipated conditions of normal use.

4.3. Immediate medical attention and special treatment, if necessary

Treat symptomatically.

SECTION 5: Fire-fighting measures

5.1. Suitable (and unsuitable) extinguishing media

Suitable extinguishing media : Foam. Dry powder. Carbon dioxide. Water spray. Sand.

5.2. Specific hazards arising from the chemical

No additional information available

5.3. Special protective equipment and precautions for fire-fighters

Firefighting instructions : Use water spray or fog for cooling exposed containers. Exercise caution when fighting any chemical fire.

Protection during firefighting : Do not enter fire area without proper protective equipment, including respiratory protection.

SECTION 6: Accidental release measures

6.1. Personal precautions, protective equipment and emergency procedures

6.1.1. For non-emergency personnel

Emergency procedures : Evacuate unnecessary personnel.

6.1.2. For emergency responders

Protective equipment : Equip cleanup crew with proper protection.

Emergency procedures : Ventilate area.

6.2. Environmental precautions

Prevent entry to sewers and public waters. Notify authorities if liquid enters sewers or public waters.

6.3. Methods and material for containment and cleaning up

Methods for cleaning up : Soak up spills with inert solids, such as clay or diatomaceous earth as soon as possible.

6.4. Reference to other sections

See Heading 8. Exposure controls and personal protection.

SECTION 7: Handling and storage

7.1. Precautions for safe handling

Precautions for safe handling : Wash hands and other exposed areas with mild soap and water before eating, drinking or smoking and when leaving work.

7.2. Conditions for safe storage, including any incompatibilities

Storage conditions : Keep container closed when not in use.

Incompatible products : Metallic sodium.

Incompatible materials : Sources of ignition. Direct sunlight.

SECTION 8: Exposure controls/personal protection

8.1. Control parameters

No additional information available

8.2. Appropriate engineering controls

Appropriate engineering controls : Provide adequate general and local exhaust ventilation.

8.3. Individual protection measures/Personal protective equipment

Personal protective equipment:

Gloves. Safety glasses.

Hand protection:

Wear protective gloves.

Eye protection:

Chemical goggles or safety glasses

Respiratory protection:

None necessary.

Other information:

Do not eat, drink or smoke during use.

SECTION 9: Physical and chemical properties

9.1. Information on basic physical and chemical properties

Physical state	:	Liquid
Color	:	Colorless
Odor	:	None.
Odor threshold	:	No data available
pH	:	7
Melting point	:	0 °C
Freezing point	:	No data available
Boiling point	:	100 °C
Critical temperature	:	374.1 °C
Critical pressure	:	218.3 atm
Flash point	:	No data available
Relative evaporation rate (butyl acetate=1)	:	No data available
Flammability (solid, gas)	:	Non flammable.
Vapor pressure	:	17.535 mm Hg
Vapor pressure at 50 °C	:	92.51 mm Hg
Relative vapor density at 20 °C	:	No data available
Relative density	:	1
Specific gravity / density	:	0.99823 g/ml
Molecular mass	:	18 g/mol
Solubility	:	Soluble in acetic acid. Soluble in acetone. Soluble in ammonia. Soluble in ammonium chloride. Soluble in ethanol. Soluble in glycerol. Soluble in hydrochloric acid. Soluble in methanol. Soluble in nitric acid. Soluble in sulfuric acid. Soluble in sodium hydroxide solution. Soluble in propylene glycol.
Log Pow	:	No data available
Auto-ignition temperature	:	No data available
Decomposition temperature	:	No data available
Viscosity, kinematic	:	1.004 cSt
Viscosity, dynamic	:	1.002 cP
Explosion limits	:	No data available
Explosive properties	:	Not applicable.
Oxidizing properties	:	None.

9.2. Other information

VOC content : 0 %

SECTION 10: Stability and reactivity

10.1. Reactivity

No additional information available

10.2. Chemical stability

Stable under normal conditions.

10.3. Possibility of hazardous reactions

Not established.

10.4. Conditions to avoid

Extremely high or low temperatures.

10.5. Incompatible materials

Metallic sodium.

10.6. Hazardous decomposition products

Hydrogen. oxygen.

SECTION 11: Toxicological information

11.1. Information on toxicological effects

Likely routes of exposure : Skin and eye contact

Acute toxicity : Not classified

Water (7732-18-5)	
LD50 oral rat	≥ 90000 mg/kg
ATE US (oral)	90000 mg/kg body weight

Skin corrosion/irritation : Not classified
pH: 7

Serious eye damage/irritation : Not classified
pH: 7

Respiratory or skin sensitization : Not classified

Germ cell mutagenicity : Not classified

Carcinogenicity : Not classified
(Based on available data, the classification criteria are not met)

Reproductive toxicity : Not classified

Specific target organ toxicity – single exposure : Not classified

Specific target organ toxicity – repeated exposure : Not classified

Aspiration hazard : Not classified

Potential Adverse human health effects and symptoms : Based on available data, the classification criteria are not met.

SECTION 12: Ecological information

12.1. Toxicity

No additional information available

12.2. Persistence and degradability

Water (7732-18-5)	
Persistence and degradability	Not established.

12.3. Bioaccumulative potential

Water (7732-18-5)	
Bioaccumulative potential	Not established.

12.4. Mobility in soil

No additional information available

12.5. Other adverse effects

Other information : No other effects known.

SECTION 13: Disposal considerations

13.1. Disposal methods

Waste disposal recommendations : Dispose in a safe manner in accordance with local/national regulations.

SECTION 14: Transport information

Department of Transportation (DOT)

In accordance with DOT

Not regulated

SECTION 15: Regulatory information

15.1. US Federal regulations

Water (7732-18-5)
Listed on the United States TSCA (Toxic Substances Control Act) inventory

All components of this product are listed, or excluded from listing, on the United States Environmental Protection Agency Toxic Substances Control Act (TSCA) inventory

15.2. International regulations

CANADA

No additional information available

EU-Regulations

No additional information available

National regulations

No additional information available

15.3. US State regulations

California Proposition 65 - This product does not contain any substances known to the state of California to cause cancer, developmental and/or reproductive harm

SECTION 16: Other information

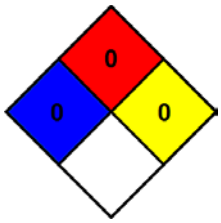
Revision date : 06/12/2018

Other information : None.

NFPA health hazard : 0 - Materials that, under emergency conditions, would offer no hazard beyond that of ordinary combustible materials.

NFPA fire hazard : 0 - Materials that will not burn under typical fire conditions, including intrinsically noncombustible materials such as concrete, stone, and sand.

NFPA reactivity : 0 - Material that in themselves are normally stable, even under fire conditions.



Hazard Rating

Health : 0 Minimal Hazard - No significant risk to health

Flammability : 0 Minimal Hazard - Materials that will not burn

Physical : 0 Minimal Hazard - Materials that are normally stable, even under fire conditions, and will NOT react with water, polymerize, decompose, condense, or self-react. Non-Explosives.

Personal protection : A

A - Safety glasses

SDS US LabChem

Information in this SDS is from available published sources and is believed to be accurate. No warranty, express or implied, is made and LabChem Inc assumes no liability resulting from the use of this SDS. The user must determine suitability of this information for his application.

SAFETY DATA SHEET

CITGO No. 2 Diesel Fuel, Low Sulfur, All Grades

Section 1. Identification

GHS product identifier : CITGO No. 2 Diesel Fuel, Low Sulfur, All Grades

Chemical name : Fuels, diesel, No 2

Synonyms : No. 2-D Grade Diesel Fuel Oil (defined by ASTM D-975); Treated or Refined Diesel Fuel No. 2; Grade 2 Distillate Fuel; Hydrodesulfurized Middle Distillate; C9-C16 Petroleum Hydrocarbons

Code : Various

MSDS # : AG2DF

Supplier's details : CITGO Petroleum Corporation
P.O. Box 4689
Houston, TX 77210
sdsvend@citgo.com

Emergency telephone number : Technical Contact: (832) 486-4000
Medical Emergency: (832) 486-4700
CHEMTREC Emergency: (800) 424-9300
(United States Only)

Section 2. Hazards identification

OSHA/HCS status : This material is considered hazardous by the OSHA Hazard Communication Standard (29 CFR 1910.1200).

Classification of the substance or mixture : FLAMMABLE LIQUIDS - Category 3
ACUTE TOXICITY: INHALATION - Category 4
SKIN CORROSION/IRRITATION - Category 2
SERIOUS EYE DAMAGE/ EYE IRRITATION - Category 2B
CARCINOGENICITY - Category 2
SPECIFIC TARGET ORGAN TOXICITY (REPEATED EXPOSURE) [central nervous system (CNS)] - Category 2
ASPIRATION HAZARD - Category 1

GHS label elements

Hazard pictograms :

Signal word : Danger

Hazard statements : Flammable liquid and vapor.
Harmful if inhaled.
Causes skin and eye irritation.
Suspected of causing cancer.
May be fatal if swallowed and enters airways.
May cause damage to organs through prolonged or repeated exposure. (central nervous system (CNS))

Precautionary statements

Prevention : Obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Use personal protective equipment as required. Wear protective gloves. Wear eye or face protection. Keep away from heat, sparks, open flames and hot surfaces. - No smoking. Use explosion-proof electrical, ventilating, lighting and all material-handling equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Keep container tightly closed. Use only outdoors or in a well-ventilated area. Do not breathe vapor. Wash hands thoroughly after handling.

Section 2. Hazards identification

Response : Get medical attention if you feel unwell. IF exposed or concerned: Get medical attention. IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing. Call a POISON CENTER or physician if you feel unwell. IF SWALLOWED: Immediately call a POISON CENTER or physician. Do NOT induce vomiting. IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water or shower. IF ON SKIN: Wash with plenty of soap and water. Take off contaminated clothing. If skin irritation occurs: Get medical attention. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical attention.

Storage : Store locked up. Store in a well-ventilated place. Keep cool.

Disposal : Dispose of contents and container in accordance with all local, regional, national and international regulations.

Hazards not otherwise classified : None known.

Section 3. Composition/information on ingredients

Substance/mixture : Substance

Chemical name : Fuels, diesel, No 2

Other means of identification : No. 2-D Grade Diesel Fuel Oil (defined by ASTM D-975); Treated or Refined Diesel Fuel No. 2; Grade 2 Distillate Fuel; Hydrodesulfurized Middle Distillate; C9-C16 Petroleum Hydrocarbons

CAS number/other identifiers

CAS number : 68476-34-6

Ingredient name	%	CAS number
Ethyltoluene	<3	25550-14-5
Trimethylbenzene, all isomers	<2	25551-13-7
Naphthalene	<2	91-20-3
Biphenyl	<2	92-52-4
Cumene	<1	98-82-8
Xylenes, mixed isomers	<1	1330-20-7
Ethylbenzene	<1	100-41-4

* = Various ** = Mixture *** = Proprietary

Any concentration shown as a range is to protect confidentiality or is due to process variation.

Occupational exposure limits, if available, are listed in Section 8.

Section 4. First aid measures

Description of necessary first aid measures

Eye contact : Immediately flush eyes with plenty of water, occasionally lifting the upper and lower eyelids. Check for and remove any contact lenses. Continue to rinse for at least 10 minutes. Get medical attention.

Inhalation : Remove victim to fresh air and keep at rest in a position comfortable for breathing. If it is suspected that gas or vapor is still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. If not breathing, if breathing is irregular or if respiratory arrest occurs, provide artificial respiration or oxygen by trained personnel. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation. Get medical attention. If necessary, call a poison center or physician. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Skin contact : Wash contaminated skin with soap and water. Remove contaminated clothing and shoes. Continue to rinse for at least 10 minutes. Get medical attention. Wash clothing before reuse. Clean shoes thoroughly before reuse.

Section 4. First aid measures

Ingestion : Get medical attention immediately. Call a poison center or physician. Wash out mouth with water. Remove dentures if any. Remove victim to fresh air and keep at rest in a position comfortable for breathing. Aspiration hazard if swallowed. Can enter lungs and cause damage. Do not induce vomiting. If vomiting occurs, the head should be kept low so that vomit does not enter the lungs. Never give anything by mouth to an unconscious person. If unconscious, place in recovery position and get medical attention immediately. Maintain an open airway. Loosen tight clothing such as a collar, tie, belt or waistband.

Most important symptoms/effects, acute

Potential acute health effects

Eye contact : Causes eye irritation.

Inhalation : Harmful if inhaled. Long-term exposure to diesel engine exhaust may cause cancer.

Skin contact : Causes skin irritation.

Ingestion : May be fatal if swallowed and enters airways. Irritating to mouth, throat and stomach.

Over-exposure signs/symptoms

Eye contact : Adverse symptoms may include the following:
pain or irritation
watering
redness

Inhalation : No specific data.

Skin contact : Adverse symptoms may include the following:
irritation
redness

Ingestion : Adverse symptoms may include the following:
nausea or vomiting

Indication of immediate medical attention and special treatment needed, if necessary

Notes to physician : If ingested, this material presents a significant aspiration and chemical pneumonitis hazard. Induction of emesis is not recommended. Consider activated charcoal and/or gastric lavage. If patient is obtunded, protect the airway by cuffed endotracheal intubation or by placement of the body in a Trendelenburg and left lateral decubitus position.

Specific treatments : Treat symptomatically and supportively.

Protection of first-aiders : No action shall be taken involving any personal risk or without suitable training. If it is suspected that gas or vapor is still present, the rescuer should wear an appropriate mask or self-contained breathing apparatus. It may be dangerous to the person providing aid to give mouth-to-mouth resuscitation.

See toxicological information (Section 11)

Section 5. Fire-fighting measures

Specific hazards arising from the chemical : Flammable liquid and vapor. In a fire or if heated, a pressure increase will occur and the container may burst, with the risk of a subsequent explosion. The vapor/gas is heavier than air and will spread along the ground. Vapors may accumulate in low or confined areas or travel a considerable distance to a source of ignition and flash back. Runoff to sewer may create fire or explosion hazard.

Extinguishing media

Suitable extinguishing media : Use dry chemical, carbon dioxide (CO_2,) water spray (fog) or foam.

Unsuitable extinguishing media : Do not use water jet.

Section 5. Fire-fighting measures

Hazardous thermal decomposition products : Decomposition products may include the following materials:
carbon dioxide
carbon monoxide
Diesel engine exhaust

Special protective actions for fire-fighters : Promptly isolate the scene by removing all persons from the vicinity of the incident if there is a fire. No action shall be taken involving any personal risk or without suitable training. Move containers from fire area if this can be done without risk. Use water spray to keep fire-exposed containers cool.

Special protective equipment for fire-fighters : Fire-fighters should wear appropriate protective equipment and self-contained breathing apparatus (SCBA) with a full face-piece operated in positive pressure mode.

Section 6. Accidental release measures

Personal precautions, protective equipment and emergency procedures

For non-emergency personnel : No action shall be taken involving any personal risk or without suitable training. Evacuate surrounding areas. Keep unnecessary and unprotected personnel from entering. Do not touch or walk through spilled material. Shut off all ignition sources. No flares, smoking or flames in hazard area. Avoid breathing vapor or mist. Provide adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Put on appropriate personal protective equipment.

For emergency responders : If specialized clothing is required to deal with the spillage, take note of any information in Section 8 on suitable and unsuitable materials. See also the information in "For non-emergency personnel".

Environmental precautions : Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers. Inform the relevant authorities if the product has caused environmental pollution (sewers, waterways, soil or air).

Methods and materials for containment and cleaning up

Small spill : Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Dilute with water and mop up if water-soluble. Alternatively, or if water-insoluble, absorb with an inert dry material and place in an appropriate waste disposal container. Dispose of via a licensed waste disposal contractor.

Large spill : Stop leak if without risk. Move containers from spill area. Use spark-proof tools and explosion-proof equipment. Approach release from upwind. Prevent entry into sewers, water courses, basements or confined areas. Wash spillages into an effluent treatment plant or proceed as follows. Contain and collect spillage with non-combustible, absorbent material e.g. sand, earth, vermiculite or diatomaceous earth and place in container for disposal according to local regulations (see Section 13). Dispose of via a licensed waste disposal contractor. Contaminated absorbent material may pose the same hazard as the spilled product. Note: see Section 1 for emergency contact information and Section 13 for waste disposal.

Section 7. Handling and storage

Precautions for safe handling

Protective measures : Put on appropriate personal protective equipment (see Section 8). Avoid exposure - obtain special instructions before use. Do not handle until all safety precautions have been read and understood. Do not get in eyes or on skin or clothing. Do not breathe vapor or mist. Do not swallow. Use only with adequate ventilation. Wear appropriate respirator when ventilation is inadequate. Do not enter storage areas and confined spaces unless adequately ventilated. Keep in the original container or an approved alternative made from a compatible material, kept tightly closed when not in use. Store and use away from heat, sparks, open flame or any other ignition source. Use explosion-proof electrical (ventilating, lighting and material handling) equipment. Use only non-sparking tools. Take precautionary measures against electrostatic discharges. Empty containers retain product residue and can be hazardous. Do not reuse container. Non equilibrium conditions may increase the fire hazard associated with this product. Always bond receiving containers to the fill pipe before and during loading. Always confirm that receiving container is properly grounded. Bonding and grounding alone

Section 7. Handling and storage

may be inadequate to eliminate fire and explosion hazards. Carefully review operations that may increase the risks such as tank and container filling, tank cleaning, sampling, gauging, loading, filtering, mixing, agitation, etc. In addition to bonding and grounding, efforts to mitigate the hazards may include, but are not limited to, ventilation, inerting and/or reduction of transfer velocities.
Always keep nozzle in contact with the container throughout the loading process. Do NOT fill any portable container in or on a vehicle.

Special precautions, such as reduced loading rates and increased monitoring, must be observed during "switch loading" operations (i.e., loading this material in tanks or shipping compartments that previously contained a dissimilar product).

Advice on general occupational hygiene : Eating, drinking and smoking should be prohibited in areas where this material is handled, stored and processed. Workers should wash hands and face before eating, drinking and smoking. Remove contaminated clothing and protective equipment before entering eating areas. See also Section 8 for additional information on hygiene measures.

Conditions for safe storage, including any incompatibilities : Store in accordance with local regulations. Store in a segregated and approved area. Store in original container protected from direct sunlight in a dry, cool and well-ventilated area, away from incompatible materials (see Section 10) and food and drink. Store locked up. Eliminate all ignition sources. Separate from oxidizing materials. Keep container tightly closed and sealed until ready for use. Containers that have been opened must be carefully resealed and kept upright to prevent leakage. Do not store in unlabeled containers. Use appropriate containment to avoid environmental contamination.

Bulk Storage Conditions: Maintain all storage tanks in accordance with applicable regulations. Use necessary controls to monitor tank inventories. Inspect all storage tanks on a periodic basis. Test tanks and associated piping for tightness. Maintain the automatic leak detection devices to assure proper working condition.

Section 8. Exposure controls/personal protection

Control parameters

Occupational exposure limits

Ingredient name	Exposure limits
Trimethylbenzene, all isomers	**ACGIH TLV (United States, 4/2014).** TWA: 25 ppm 8 hours. TWA: 123 mg/m³ 8 hours.
Naphthalene	**ACGIH (United States). Absorbed through skin.** TWA: 10 ppm 8 hours. STEL: 15 ppm 15 minutes. **OSHA (United States).** TWA: 10 ppm 8 hours. **ACGIH TLV (United States, 4/2014). Absorbed through skin.** TWA: 10 ppm 8 hours. TWA: 52 mg/m³ 8 hours. **OSHA PEL (United States, 2/2013).** TWA: 10 ppm 8 hours. TWA: 50 mg/m³ 8 hours.
Biphenyl	**OSHA PEL Z2 (United States).** TWA: 0.2 ppm 8 hours. **ACGIH TLV (United States, 4/2014).** TWA: 0.2 ppm 8 hours. TWA: 1.3 mg/m³ 8 hours. **OSHA PEL (United States, 2/2013).** TWA: 0.2 ppm 8 hours. TWA: 1 mg/m³ 8 hours.
Cumene	**ACGIH TLV (United States, 4/2014).** TWA: 50 ppm 8 hours. **OSHA PEL (United States, 2/2013). Absorbed through**

Section 8. Exposure controls/personal protection

	skin. TWA: 50 ppm 8 hours. TWA: 245 mg/m³ 8 hours.
Xylenes, mixed isomers	**ACGIH TLV (United States, 4/2014).** TWA: 100 ppm 8 hours. TWA: 434 mg/m³ 8 hours. STEL: 150 ppm 15 minutes. STEL: 651 mg/m³ 15 minutes. **OSHA PEL (United States, 2/2013).** TWA: 100 ppm 8 hours. TWA: 435 mg/m³ 8 hours.
Ethylbenzene	**ACGIH TLV (United States, 4/2014).** TWA: 20 ppm 8 hours. **OSHA PEL (United States, 2/2013).** TWA: 100 ppm 8 hours. TWA: 435 mg/m³ 8 hours.

Appropriate engineering controls : Use only with adequate ventilation. Use process enclosures, local exhaust ventilation or other engineering controls to keep worker exposure to airborne contaminants below any recommended or statutory limits. The engineering controls also need to keep gas, vapor or dust concentrations below any lower explosive limits. Use explosion-proof ventilation equipment.

Environmental exposure controls : Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation. In some cases, vapor controls, filters or engineering modifications to the process equipment will be necessary to reduce emissions to acceptable levels.

Individual protection measures

Hygiene measures : Wash hands, forearms and face thoroughly after handling chemical products, before eating, smoking and using the lavatory and at the end of the working period. Appropriate techniques should be used to remove potentially contaminated clothing. Wash contaminated clothing before reusing. Ensure that eyewash stations and safety showers are close to the workstation location.

Eye/face protection : Safety glasses equipped with side shields are recommended as minimum protection in industrial settings. If contact is possible, the following protection should be worn, unless the assessment indicates a higher degree of protection: Splash goggles. Safety eyewear complying with an approved standard should be used when a risk assessment indicates this is necessary to avoid exposure to liquid splashes, mists, gases or dusts. chemical splash goggles. If inhalation hazards exist, a full-face respirator may be required instead.

Skin protection

Hand protection : Chemical-resistant gloves complying with an approved standard should be worn at all times when handling chemical products if a risk assessment indicates this is necessary. Considering the parameters specified by the glove manufacturer, check during use that the gloves are still retaining their protective properties. It should be noted that the time to breakthrough for any glove material may be different for different glove manufacturers.

Body protection : Personal protective equipment for the body should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Other skin protection : Appropriate footwear and any additional skin protection measures should be selected based on the task being performed and the risks involved and should be approved by a specialist before handling this product.

Respiratory protection : Use a properly fitted, air-purifying or supplied-air respirator complying with an approved standard if a risk assessment indicates this is necessary. Respirator selection must be based on known or anticipated exposure levels, the hazards of the product and the safe working limits of the selected respirator.

Section 9. Physical and chemical properties

Physical state	:	Liquid.
Color	:	Colorless to light yellow or red.
Odor	:	Characteristic.
pH	:	Not available.
Melting point	:	-30 to -18°C (-22 to -0.4°F)
Boiling point/boiling range	:	282 to 338°C (539.6 to 640.4°F)
Flash point	:	Closed cup: 52°C (125.6°F) [Pensky-Martens.]
Evaporation rate	:	<1 (butyl acetate = 1)
Lower and upper explosive (flammable) limits	:	Lower: 0.6% Upper: 6.5%
Vapor pressure	:	0.27 kPa (2 mm Hg) [room temperature]
Vapor density	:	5 [Air = 1]
Relative density	:	0.84
Density lbs/gal	:	Estimated 7 lbs/gal
Gravity, °API	:	Estimated 37 @ 60 F
Solubility	:	Very slightly soluble in the following materials: cold water.
Solubility in water	:	0.005 g/l
Partition coefficient: n-octanol/water	:	>3.3
Auto-ignition temperature	:	254 to 285°C (489.2 to 545°F)
Viscosity	:	Kinematic (room temperature): 0.03 cm^2/s (3 cSt)

Section 10. Stability and reactivity

Reactivity	:	Not expected to be Explosive, Self-Reactive, Self-Heating, or an Organic Peroxide under US GHS Definition(s).
Chemical stability	:	The product is stable.
Possibility of hazardous reactions	:	Under normal conditions of storage and use, hazardous reactions will not occur.
Conditions to avoid	:	Avoid all possible sources of ignition (spark or flame). Do not pressurize, cut, weld, braze, solder, drill, grind or expose containers to heat or sources of ignition. Do not allow vapor to accumulate in low or confined areas.
Incompatible materials	:	Reactive or incompatible with the following materials: oxidizing materials
Hazardous decomposition products	:	Under normal conditions of storage and use, hazardous decomposition products should not be produced.

Section 11. Toxicological information

Information on toxicological effects

Acute toxicity

Section 11. Toxicological information

Product/ingredient name	Result	Species	Dose	Exposure
Trimethylbenzene, all isomers	LD50 Oral	Rat	8970 mg/kg	-
Naphthalene	LD50 Oral	Rat	490 mg/kg	-
Biphenyl	LD50 Dermal	Rabbit	>5010 mg/kg	-

Skin : No additional information.

Eyes : No additional information.

Respiratory : No additional information.

Sensitization

Skin : No additional information.

Respiratory : No additional information.

Mutagenicity

Conclusion/Summary : No additional information.

Carcinogenicity

Conclusion/Summary :

Section 11. Toxicological information

Diesel exhaust particulate: Lung tumor and lymphomas were identified in rats and mice exposed to unflitered diesel fuel exhaust in chronic inhalation studies. Further, epidemiological studies have identified increase incidences of lung cancer in US railroad workers and bladder cancer in bus and truck drivers possibly associated with exposure to diesel engine exhaust. NTP has determined that exposure to diesel exhaust particulates, a complex mixture of combustion products of diesel fuel, is reasonably anticipated to be a human carcinogen. In addition, NIOSH has identified complete diesel exhaust as a potential carcinogen.

Classification

Product/ingredient name	OSHA	IARC	NTP
Fuels, diesel, No 2	-	3	-
Diesel exhaust particulate	-	1	Reasonably anticipated to be a human carcinogen.
Naphthalene	-	2B	Reasonably anticipated to be a human carcinogen.
Cumene	-	2B	Reasonably anticipated to be a human carcinogen.
Xylenes, mixed isomers	-	3	-
Ethylbenzene	-	2B	-

Reproductive toxicity

Conclusion/Summary : No additional information.

Teratogenicity

Conclusion/Summary : No additional information.

Specific target organ toxicity (single exposure)

Name	Category	Route of exposure	Target organs
Trimethylbenzene, all isomers	Category 3	Not applicable.	Respiratory tract irritation and Narcotic effects
Biphenyl	Category 3	Not applicable.	Respiratory tract irritation
Cumene	Category 3	Not applicable.	Respiratory tract irritation
Ethylbenzene	Category 3	Not applicable.	Respiratory tract irritation

Specific target organ toxicity (repeated exposure)

Name	Category	Route of exposure	Target organs
Fuels, diesel, No 2	Category 2	Not determined	central nervous system (CNS)
Trimethylbenzene, all isomers	Category 2	Not determined	central nervous system (CNS)
Xylenes, mixed isomers	Category 2	Not determined	ears

Aspiration hazard

Name	Result
Trimethylbenzene, all isomers	ASPIRATION HAZARD - Category 1
Cumene	ASPIRATION HAZARD - Category 1
Ethylbenzene	ASPIRATION HAZARD - Category 1
propylbenzene	ASPIRATION HAZARD - Category 1

Information on the likely routes of exposure : Routes of entry anticipated: Dermal, Inhalation.

Potential acute health effects

Eye contact : Causes eye irritation.

Inhalation : Harmful if inhaled. Long-term exposure to diesel engine exhaust may cause cancer.

Skin contact : Causes skin irritation.

Section 11. Toxicological information

Ingestion : May be fatal if swallowed and enters airways. Irritating to mouth, throat and stomach.

Symptoms related to the physical, chemical and toxicological characteristics

Eye contact : Adverse symptoms may include the following:
pain or irritation
watering
redness

Inhalation : No specific data.

Skin contact : Adverse symptoms may include the following:
irritation
redness

Ingestion : Adverse symptoms may include the following:
nausea or vomiting

Potential chronic health effects

General : May cause damage to organs through prolonged or repeated exposure.

Carcinogenicity : Suspected of causing cancer. Risk of cancer depends on duration and level of exposure.

Mutagenicity : No known significant effects or critical hazards.

Teratogenicity : No known significant effects or critical hazards.

Developmental effects : No known significant effects or critical hazards.

Fertility effects : No known significant effects or critical hazards.

Section 12. Ecological information

Toxicity

Product/ingredient name	Result	Species	Exposure
Trimethylbenzene, all isomers	Acute LC50 5600 µg/l Marine water	Crustaceans - Palaemonetes pugio	48 hours
Naphthalene	Acute EC50 1600 µg/l Fresh water	Daphnia - Daphnia magna - Neonate	48 hours
	Acute LC50 2350 µg/l Marine water	Crustaceans - Palaemonetes pugio	48 hours
	Acute LC50 213 µg/l Fresh water	Fish - Melanotaenia fluviatilis - Larvae	96 hours
	Chronic NOEC 0.67 ppm Fresh water	Fish - Oncorhynchus kisutch	40 days
Biphenyl	Acute LC50 360 µg/l Fresh water	Daphnia - Daphnia magna - Neonate	48 hours
	Acute LC50 1450 µg/l Fresh water	Fish - Pimephales promelas	96 hours
	Chronic NOEC 0.17 mg/l Fresh water	Daphnia - Daphnia magna - Neonate	21 days
	Chronic NOEC 0.229 mg/l Fresh water	Fish - Oncorhynchus mykiss	87 days
Cumene	Acute EC50 2600 µg/l Fresh water	Algae - Pseudokirchneriella subcapitata	72 hours
	Acute EC50 7400 µg/l Fresh water	Crustaceans - Artemia sp. - Nauplii	48 hours
	Acute EC50 10600 µg/l Fresh water	Daphnia - Daphnia magna - Neonate	48 hours
	Acute LC50 2700 µg/l Fresh water	Fish - Oncorhynchus mykiss	96 hours
Xylenes, mixed isomers	Acute EC50 90 mg/l Fresh water	Crustaceans - Cypris subglobosa	48 hours
	Acute LC50 8.5 ppm Marine water	Crustaceans - Palaemonetes pugio - Adult	48 hours
	Acute LC50 8500 µg/l Marine water	Crustaceans - Palaemonetes pugio	48 hours
	Acute LC50 15700 µg/l Fresh water	Fish - Lepomis macrochirus -	96 hours

Section 12. Ecological information

		Juvenile (Fledgling, Hatchling, Weanling)	
	Acute LC50 19000 µg/l Fresh water	Fish - Lepomis macrochirus	96 hours
	Acute LC50 13400 µg/l Fresh water	Fish - Pimephales promelas	96 hours
	Acute LC50 16940 µg/l Fresh water	Fish - Carassius auratus	96 hours
Ethylbenzene	Acute EC50 4600 µg/l Fresh water	Algae - Pseudokirchneriella subcapitata	72 hours
	Acute EC50 3600 µg/l Fresh water	Algae - Pseudokirchneriella subcapitata	96 hours

	Acute LC50 5200 µg/l Marine water	Crustaceans - Americamysis bahia	48 hours
	Acute LC50 4200 µg/l Fresh water	Fish - Oncorhynchus mykiss	96 hours
	Chronic NOEC 1000 µg/l Fresh water	Algae - Pseudokirchneriella subcapitata	96 hours

Conclusion/Summary : Not available.

Persistence and degradability

Not available.

Conclusion/Summary : Not available.

Bioaccumulative potential

Product/ingredient name	$LogP_{ow}$	BCF	Potential
Fuels, diesel, No 2	>3.3	-	low
Trimethylbenzene, all isomers	3.4 to 3.8	-	low
Naphthalene	3.4	36.5 to 168	low
Biphenyl	4.008	1900	high
Cumene	3.55	94.69	low
Xylenes, mixed isomers	3.12	8.1 to 25.9	low
Ethylbenzene	3.6	-	low

Mobility in soil

Soil/water partition coefficient (K_{OC}) : Not available.

Other adverse effects : No known significant effects or critical hazards.

Section 13. Disposal considerations

Disposal methods : The generation of waste should be avoided or minimized wherever possible. Disposal of this product, solutions and any by-products should at all times comply with the requirements of environmental protection and waste disposal legislation and any regional local authority requirements. Dispose of surplus and non-recyclable products via a licensed waste disposal contractor. Waste should not be disposed of untreated to the sewer unless fully compliant with the requirements of all authorities with jurisdiction. Waste packaging should be recycled. This material and its container must be disposed of in a safe way. Care should be taken when handling emptied containers that have not been cleaned or rinsed out. Empty containers or liners may retain some product residues. Vapor from product residues may create a highly flammable or explosive atmosphere inside the container. Do not cut, weld or grind used containers unless they have been cleaned thoroughly internally. Avoid dispersal of spilled material and runoff and contact with soil, waterways, drains and sewers.

RCRA classification : D001, D018

Section 14. Transport information

	DOT Classification	IMDG	IATA
UN number	NA1993	UN 1202	UN 1202
UN proper shipping name	NA 1993, Diesel Fuel, 3, PG III	UN 1202, Diesel Fuel, 3, PG III	UN 1202, Diesel Fuel, 3, PG III
Transport hazard class(es)	3	3	3
Packing group	III	III	III
Environmental hazards	No.	Yes.	No.
Additional information	**Packaging instruction** **Passenger aircraft** Quantity limitation: 60 L Packaging instructions: Y309 **Cargo aircraft** Quantity limitation: 220 L Packaging instructions: 310 **Remarks** 49 CFR 173.150 (f)(1) states that a flammable liquid with a flash point at or above 38ºC (100ºF) that does not meet the definition of any other hazard class may be reclassed as a combustible liquid. This provision does not apply to transportation by vessel or aircraft except where other means of transportaion is impracticable.	-	**Cargo Aircraft Only**Quantity limitation: 220 L Packaging instructions: 310 **Limited Quantities - Passenger Aircraft**Quantity limitation: 60 L Packaging instructions: 309Y

Special precautions for user : **Transport within user's premises:** always transport in closed containers that are upright and secure. Ensure that persons transporting the product know what to do in the event of an accident or spillage.

Section 15. Regulatory information

U.S. Federal regulations : **United States inventory (TSCA 8b)**: All components are listed or exempted.

Clean Water Act (CWA) 307: Ethylbenzene; Naphthalene; Toluene; Benzene

Clean Water Act (CWA) 311: Ethylbenzene; Xylenes, mixed isomers; Naphthalene; Toluene; Benzene

This material is classified as an oil under Section 311 of the Clean Water Act (CWA) and the Oil Pollution Act of 1990 (OPA). Discharges or spills which produce a visible sheen on waters of the United States, their adjoining shorelines, or into conduits leading to surface waters must be reported to the EPA's National Response Center at (800) 424-8802.

Section 15. Regulatory information

SARA 302/304

Composition/information on ingredients

SARA 304 RQ : Not applicable.

SARA 311/312

Classification : Fire hazard
Immediate (acute) health hazard
Delayed (chronic) health hazard

Composition/information on ingredients

Name	Fire hazard	Sudden release of pressure	Reactive	Immediate (acute) health hazard	Delayed (chronic) health hazard
Fuels, diesel, No 2	Yes.	No.	No.	Yes.	Yes.
Trimethylbenzene, all isomers	Yes.	No.	No.	Yes.	Yes.
Naphthalene	Yes.	No.	No.	Yes.	Yes.
Biphenyl	No.	No.	No.	Yes.	No.
Cumene	Yes.	No.	No.	Yes.	Yes.
Xylenes, mixed isomers	Yes.	No.	No.	Yes.	Yes.
Ethylbenzene	Yes.	No.	No.	Yes.	Yes.

SARA 313

	Product name	CAS number	%
Form R - Reporting requirements	Naphthalene Ethylbenzene	91-20-3 100-41-4	<1 <1
Supplier notification	Naphthalene Ethylbenzene	91-20-3 100-41-4	<1 <1

SARA 313 notifications must not be detached from the SDS and any copying and redistribution of the SDS shall include copying and redistribution of the notice attached to copies of the SDS subsequently redistributed.

State regulations

Massachusetts : The following components are listed: Trimethylbenzene, all isomers; Ethyltoluene

New York : The following components are listed: Ethylbenzene; Cumene; Benzene, 1-methylethyl-; Naphthalene

New Jersey : The following components are listed: Ethylbenzene; Cumene; NAPHTHALENE; TRIMETHYL BENZENE (mixed isomers); BENZENE, TRIMETHYL-; ETHYLTOLUENES; BENZENE, ETHYLMETHYL-

Pennsylvania : The following components are listed: Ethylbenzene; Cumene; NAPHTHALENE; Trimethylbenzene, all isomers; Ethyltoluene

California Prop. 65

WARNING: This product contains a chemical known to the State of California to cause cancer.
WARNING: This product contains less than 1% of a chemical known to the State of California to cause birth defects or other reproductive harm.

Ingredient name	%	Cancer	Reproductive	No significant risk level	Maximum acceptable dosage level
Naphthalene	<1	Yes.	No.	Yes.	No.
Cumene	<1	Yes.	No.	No.	No.
Ethylbenzene	<1	Yes.	No.	41 µg/day (ingestion) 54 µg/day (inhalation)	No.
Diesel exhaust particulate	<1	Yes.	No.	No.	No.
Toluene	<0.1	No.	Yes.	No.	7000 µg/day (ingestion)
Benzene	<0.1	Yes.	Yes.	6.4 µg/day (ingestion)	24 µg/day (ingestion) 49 µg/day

Section 15. Regulatory information

				13 µg/day (inhalation)	(inhalation)

International regulations

International lists : **Australia inventory (AICS)**: All components are listed or exempted.
China inventory (IECSC): All components are listed or exempted.
Japan inventory: All components are listed or exempted.
Korea inventory: All components are listed or exempted.
Malaysia Inventory (EHS Register): Not determined.
New Zealand Inventory of Chemicals (NZIoC): All components are listed or exempted.
Philippines inventory (PICCS): All components are listed or exempted.
Taiwan inventory (CSNN): Not determined.

Canada inventory : All components are listed or exempted.

EU Inventory : All components are listed or exempted.

WHMIS (Canada) : Class B-3: Combustible liquid with a flash point between 37.8°C (100°F) and 93.3°C (200°F).
Class D-2A: Material causing other toxic effects (Very toxic).

CU01/ST02 - CO Control Option Supporting Data

Data Inputs

Select the type of oxidizer: Catalytic Oxidizer - Fixed Bed

Enter the following information for your emission source:

Composition of Inlet Gas Stream

Pollutant Name	Concentration (ppmv)	Lower Explosive Limit (LEL) (ppmv)*	Heat of Combustion (Btu/scf)	Molecular Weight
Carbon Monoxide	11	125,000	323	28.01

Note: The lower explosion limit (LEL), heat of combustion and molecular weight for some commonly used VOC/HAP are provided in the table below.

Enter the design data for the proposed oxidizer:

Number of operating hours/year	8,760	hours/year	
Inlet volumetric flow rate(Q_{wi}) at 77°F and 1 atm.	160,000	scfm	
Inlet volumetric flow rate(Q_{wi}) (actual conditions)	157,000	acfm	
Pressure drop (ΔP)	23	inches of water*	* 23 inches of water is the default pressure drop for thermal oxidizers; 19 inches of water is the default pressure drop for catalytic oxidizers. Enter actual value, if known.
Motor/Fan Efficiency (ε)	60	percent*	* 60% is a default fan efficiency. User should enter actual value, if known.
Inlet Waste Gas Temperature (T_{wi})	100	°F*	* 100°F is a default temperature. User should enter actual value, if known.
Operating Temperature (T_{fi})	900	°F	* Note: Default value for Tfi is 900°F for catalytic oxidizers. Use actual value if known. Tfi for catalytic oxidizers is typically between 300 and 900°F.
Destruction and Removal Efficiency (DRE)	95	percent	
Estimated Equipment Life	15	Years	
Catalyst Data:			
Estimated catalyst life (y)	4	years	* 4 years is a default value. User should enter actual value, if known.
Catalyst Unit Cost (CC)	0	$/ft^3	
Space velocity for catalyst (Φ)	30,000	/hour	* 30,000 per hour is a default value. User should enter actual value, if known.

Percent Energy Recovery (HR) = 70 percent

Enter the cost data:

Desired dollar-year	2021			
CEPCI* for 2021	686.7	Enter the CEPCI value for 2021	390.6	1999 CEPCI
Annual Interest Rate (i)	4.25	Percent		
Electricity ($Cost_{elect}$)	0.0786	$/kWh		
Natural Gas Fuel Cost ($Cost_{fuel}$)	0.0061	$/scf		
Operator Labor Rate	$23.00	per hour		
Maintenance Labor rate	$32.00	per hour		
Contingency Factor (CF)	10.0	Percent		

* 10 percent is a default value for construction contingencies. User may enter values between 5 and 15 percent.

* CEPCI is the Chemical Engineering Plant Cost Escalation/De-escalation Index. The use of CEPCI in this spreadsheet is not an endorsement of the index for purposes of cost escalation or de-escalation, but is there merely to allow for availability of a well-known cost index to spreadsheet users. Use of other well-known cost indexes (e.g., M&S) is acceptable.

Cost Estimate

Direct Costs				
Total Purchased equipment costs (in 2021 dollars)				
Incinerator + auxiliary equipment[a] (A) =				
Equipment Costs (EC) for a Fixed Bed Catalytic Oxidizer	= (1,443 x Qtot^(0.5527)) x (2021 CEPI/1999 CEPCI) =	1.158675799	$1,915,336	in 2021 dollars
Instrumentation[b] =	0.10 × A =		$191,534	
Sales taxes =	0.03 × A =		$57,460	
Freight =	0.05 × A =		$95,767	
		Total Purchased equipment costs (B) =	$2,260,097	in 2021 dollars

Footnotes
a - Auxiliary equipment includes equipment (e.g., duct work) normally not included with unit furnished by incinerator vendor.
b - Includes the instrumentation and controls furnished by the incinerator vendor.

Direct Installation Costs (in 2021 dollars)				
Foundations and Supports =	0.08 × B =		$180,808	
Handlong and Errection =		8760	$316,414	
Electrical =	0.04 × B =		$90,404	
Piping =	0.02 × B =		$45,202	
Insulation for Ductwork =	0.01 × B =		$22,601	
Painting =	0.01 × B =		$22,601	
Site Preparation (SP) =			$0	
Buildings (Bldg) =			$0	
		95	$678,029	
Total Direct Costs (DC) =	Total Purchase Equipment Costs (B) + Total Direct Installation Costs =		$2,938,126	in 2021 dollars

Total Indirect Installation Costs (in 2021 dollars)				
Engineering =	0.10 × B =		$226,010	
Construction and field expenses =	0.05 × B =		$113,005	
Contractor fees =	0.10 × B =		$226,010	
Start-up =	0.02 × B =		$45,202	
Performance test =	0.01 × B =		$22,601	
		Total Indirect Costs (IC) =	$632,827	
		686.7		
Continency Cost (C) =	CF(IC+DC)=		$357,095	
Total Capital Investment =		**0.0786**	**$3,928,048**	**in 2021 dollars**

Direct Annual Costs			
Catalyst Replacement Cost	= 1.08 × CC × Vol_{cat} × FWF Where CC is the $/ft^3 cost for the replacement catalyst; Vol_{cat} is the volume of catalyst required based on the waste gas flow rate (Q_{ft}) and the catalyst space velocity (Φ); and FWF is the future worth factor.	$0	
Annual Electricity Cost	= Fan Power Consumption × Operating Hours/year × Electricity Price =	$484,829	
Annual Fuel Costs for Natural Gas	= $Cost_{fuel}$ × Fuel Usage Rate × 60 min/hr × Operating hours/year	$3,488,426	
Operating Labor	Operator = 0.5hours/shift × Labor Rate × (Operating hours/8 hours/shift)	$12,593	
	Supervisor = 15% of Operator	$1,889	
Maintenance Costs	Labor = 0.5 hours/shift × Labor Rate × (Operating Hours/8 hours/shift)	$17,520	
	Materials = 100% of maintenance labor	$17,520	
Direct Annual Costs (DC) =		**$4,022,776**	**in 2021 dollars**

Indirect Annual Costs			
Overhead	= 60% of sum of operating, supervisor, maintenance labor and maintenance materials	$29,713	
Administrative Charges	= 2% of TCI	$78,561	
Property Taxes	= 1% of TCI	$39,280	
Insurance	= 1% of TCI	$39,280	
Capital Recovery	= CRF[TCI-1.08(cat. Cost)]	$359,497	
Indirect Annual Costs (IC) =		**$546,331**	**in 2021 dollars**
Total Annual Cost =	**DC + IC =**	**$4,569,108**	**in 2021 dollars**

Cost Effectiveness

Cost Effectiveness = (Total Annual Cost)/(Annual Quantity of VOC/HAP Pollutants Destroyed)

Total Annual Cost (TAC) =	$4,569,108	per year in 2021 dollars
CO Destroyed =	30.7	tons/year
Cost Effectiveness =	$148,989	per ton of pollutants removed in 2021 dollars

Data Inputs

Select the type of oxidizer: Regenerative Thermal Oxidizer

Enter the following information for your emission source:

Composition of Inlet Gas Stream

Pollutant Name	Concentration (ppmv)	Lower Explosive Limit (LEL) (ppmv)*	Heat of Combustion (Btu/scf)	Molecular Weight
Carbon Monoxide	11	125,000	323	28.01

Performance test =	0.01 × B =		$22,601	
		Total Indirect Costs (IC) =	$632,826	
		686.7		
Continency Cost (C) =	CF(IC+DC)=		$357,095	
Total Capital Investment =		**0.0786**	**$3,928,041**	**in 2021 dollars**

Direct Annual Costs			
Catalyst Replacement Cost	= 1.08 × CC × Vol_{cat} × FWF Where CC is the $/ft^3 cost for the replacement catalyst; Vol_{cat} is the volume of catalyst required based on the waste gas flow rate (Q_{ft}) and the catalyst space velocity (Φ); and FWF is the future worth factor.	$0	
Annual Electricity Cost	= Fan Power Consumption × Operating Hours/year × Electricity Price =	$484,829	
Annual Fuel Costs for Natural Gas	= $Cost_{fuel}$ × Fuel Usage Rate × 60 min/hr × Operating hours/year	$3,486,815	
Operating Labor	Operator = 0.5hours/shift × Labor Rate × (Operating hours/8 hours/shift)	$12,593	
	Supervisor = 15% of Operator	$1,889	
Maintenance Costs	Labor = 0.5 hours/shift × Labor Rate × (Operating Hours/8 hours/shift)	$17,520	
	Materials = 100% of maintenance labor	$17,520	
Direct Annual Costs (DC) =		**$4,021,165**	**in 2021 dollars**

Indirect Annual Costs			
Overhead	= 60% of sum of operating, supervisor, maintenance labor and maintenance materials	$29,713	
Administrative Charges	= 2% of TCI	$78,561	
Property Taxes	= 1% of TCI	$39,280	
Insurance	= 1% of TCI	$39,280	
Capital Recovery	= CRF[TCI-1.08(cat. Cost)]	$359,496	
Indirect Annual Costs (IC) =		**$546,330**	**in 2021 dollars**
Total Annual Cost =	**DC + IC =**	**$4,567,496**	**in 2021 dollars**

Cost Effectiveness

Cost Effectiveness = (Total Annual Cost)/(Annual Quantity of VOC/HAP Pollutants Destroyed)

Total Annual Cost (TAC) =	$4,567,496	per year in 2021 dollars
CO/VOC Destroyed =	35.9	tons/year
Cost Effectiveness =	$127,061	per ton of pollutants removed in 2021 dollars

Data Inputs

Select the type of oxidizer: Regenerative Thermal Oxidizer

Enter the following information for your emission source:

Composition of Inlet Gas Stream

Pollutant Name	Concentration (ppmv)	Lower Explosive Limit (LEL) (ppmv)*	Heat of Combustion (Btu/scf)	Molecular Weight
Carbon Monoxide	11	125,000	323	28.01
VOC	1.2	21,000	2,353	44.09

Note: The lower explosion limit (LEL), heat of combustion and molecular weight for some commonly used VOC/HAP are provided in the table below.

Enter the design data for the proposed oxidizer:

Number of operating hours/year	8,760	hours/year	
Inlet volumetric flow rate(Q_{wi}) at 77°F and 1 atm.	160,000	scfm	
Inlet volumetric flow rate(Q_{wi}) (actual conditions)	157,000	acfm	
Pressure drop (ΔP)	19	inches of water	* 23 inches of water is the default pressure drop for thermal oxidizers; 19 inches of water is the default pressure drop for catalytic oxidizers. Enter actual value, if known.
Motor/Fan Efficiency (ε)	60	percent*	* 60% is a default fan efficiency. User should enter actual value, if known.
Inlet Waste Gas Temperature (T_{wi})	100	°F*	* 100°F is a default temperature. User should enter actual value, if known.
Operating Temperature (T_{fi})	1,900	°F	* Note: Default value for Tfi is 2000°F for thermal regenerative oxidizers. Use actual value if known. Tfi for regenerative oxidizers typically between 1800 and 2000°F.
Destruction and Removal Efficiency (DRE)	95	percent	
Estimated Equipment Life	15	Years	
Heat Loss (η)	1	percent*	* 1 percent is a default value for the heat loss. User should enter actual value, if known. Heat loss is typically between 0.2 and 1.5%.

Percent Energy Recovery (HR) = 70 percent

Enter the cost data:

Desired dollar-year	2021			
CEPCI* for 2021	686.7	Enter the CEPCI value for 2021	541.7	2016 CEPCI
Annual Interest Rate (i)	4.25	Percent		
Electricity ($Cost_{elect}$)	0.0786	$/kWh

Total Annual Cost =	**DC + IC =**	**$3,058,130**	**in 2021 dollars**

Cost Effectiveness

Cost Effectiveness = (Total Annual Cost)/(Annual Quantity of VOC/HAP Pollutants Destroyed)

Total Annual Cost (TAC) =	$3,058,130	per year in 2021 dollars
CO/VOC Destroyed =	67.2	tons/year
Cost Effectiveness =	$45,479	per ton of pollutants removed in 2021 dollars

Data Inputs

Select the type of oxidizer: Regenerative Thermal Oxidizer

Enter the following information for your emission source:

Composition of Inlet Gas Stream				
Pollutant Name	Concentration (ppmv)	Lower Explosive Limit (LEL) (ppmv)*	Heat of Combustion (Btu/scf)	Molecular Weight
Carbon Monoxide	23	125,000	323	28.01
VOC	8	21,000	2,353	44.09

Note: The lower explosion limit (LEL), heat of combustion and molecular weight for some commonly used VOC/HAP are provided in the table below.

Enter the design data for the proposed oxidizer:

Number of operating hours/year	8,760	hours/year	
Inlet volumetric flow rate(Q_{wi}) at 77°F and 1 atm.	105,000	scfm	
Inlet volumetric flow rate(Q_{wi}) (actual conditions)	110,000	acfm	
Pressure drop (ΔP)	19	inches of water	* 23 inches of water is the default pressure drop for thermal oxidizers; 19 inches of water is the default pressure drop for catalytic oxidizers. Enter actual value, if known.
Motor/Fan Efficiency (ε)	60	percent*	* 60% is a default fan efficiency. User should enter actual value, if known.
Inlet Waste Gas Temperature (T_{wi})	100	°F*	* 100°F is a default temperature. User should enter actual value, if known.
Operating Temperature (T_{fi})	1,900	°F	* Note: Default value for Tfi is 2000°F for thermal regenerative oxidizers. Use actual value if known. Tfi for regenerative oxidizers typically between 1800 and 2000°F.
Destruction and Removal Efficiency (DRE)	95	percent	
Estimated Equipment Life	20	Years*	* 20 years is the typical equipment life. User should enter actual value, if known.
Heat Loss (η)	1	percent*	* 1 percent is a default value for the heat loss. User should enter actual value, if known. Heat loss is typically between 0.2 and 1.5%.

Percent Energy Recovery (HR) = 70 percent

Enter the cost data:

Desired dollar-year	2021			
CEPCI* for 2021	686.7	Enter the CEPCI value for 2021	541.7	2016 CEPCI
Annual Interest Rate (i)	4.25	Percent

Indirect Annual Costs (IC) =		**$592,040**	**in 2021 dollars**
Total Annual Cost =	**DC + IC =**	**$1,669,610**	**in 2021 dollars**

Cost Effectiveness

Cost Effectiveness = (Total Annual Cost)/(Annual Quantity of VOC/HAP Pollutants Destroyed)

Total Annual Cost (TAC) =	$1,669,610	per year in 2021 dollars
CO Destroyed =	198.4	tons/year
Cost Effectiveness =	$8,417	per ton of pollutants removed in 2021 dollars

Data Inputs

Select the type of oxidizer: Catalytic Oxidizer - Fixed Bed

Enter the following information for your emission source:

Composition of Inlet Gas Stream

Pollutant Name	Concentration (ppmv)	Lower Explosive Limit (LEL) (ppmv)*	Heat of Combustion (Btu/scf)	Molecular Weight
Carbon Monoxide	95	125,000	323	28.01
VOC	8	21,000	2,353	44.09

Note: The lower explosion limit (LEL), heat of combustion and molecular weight for some commonly used VOC/HAP are provided in the table below.

Enter the design data for the proposed oxidizer:

Number of operating hours/year	8,760	hours/year	
Inlet volumetric flow rate(Q_{wi}) at 77°F and 1 atm.	115,000	scfm	
Inlet volumetric flow rate(Q_{wi}) (actual conditions)	120,000	acfm	
Pressure drop (ΔP)	23	inches of water*	* 23 inches of water is the default pressure drop for thermal oxidizers; 19 inches of water is the default pressure drop for catalytic oxidizers. Enter actual value, if known.
Motor/Fan Efficiency (ε)	60	percent*	* 60% is a default fan efficiency. User should enter actual value, if known.
Inlet Waste Gas Temperature (T_{wi})	100	°F*	* 100°F is a default temperature. User should enter actual value, if known.
Operating Temperature (T_{fi})	900	°F	* Note: Default value for Tfi is 900°F for catalytic oxidizers. Use actual value if known. Tfi for catalytic oxidizers is typically between 300 and 900°F.
Destruction and Removal Efficiency (DRE)	95	percent	
Estimated Equipment Life	20	Years*	* 20 years is the typical equipment life. User should enter actual value, if known.
Catalyst Data:			
Estimated catalyst life (y)	4	years	* 4 years is a default value. User should enter actual value, if known.
Catalyst Unit Cost (CC)	0	$/ft^3	
Space velocity for catalyst (Φ)	30,000	/hour	* 30,000 per hour is a default value. User should enter actual value, if known.

Percent Energy Recovery (HR) = 70 percent

Enter the cost data:

Desired dollar-year	2021			
CEPCI* for 2021	686.7	Enter the CEPCI value for 2021	390.6	1999 CEPCI
Annual Interest Rate (i)	4.25	Percent		
Electricity ($Cost_{elect}$)	0.0786	$/kWh		
Natural Gas Fuel Cost ($Cost_{fuel}$)	0.0061	$/scf		
Operator Labor Rate	$23.00	per hour		
Maintenance Labor rate	$32.00	per hour		
Contingency Factor (CF)	10.0	Percent		

* 10 percent is a default value for construction contingencies. User may enter values between 5 and 15 percent.

* CEPCI is the Chemical Engineering Plant Cost Escalation/De-escalation Index. The use of CEPCI in this spreadsheet is not an endorsement of the index for purposes of cost escalation or de-escalation, but is there merely to allow for availability of a well-known cost index to spreadsheet users. Use of other well-known cost indexes (e.g., M&S) is acceptable.

Cost Effectiveness

Cost Effectiveness = (Total Annual Cost)/(Annual Quantity of VOC/HAP Pollutants Destroyed)

Total Annual Cost (TAC) =	$2,341,564	per year in 2021 dollars
CO/VOC Destroyed =	35.9	tons/year
Cost Effectiveness =	$65,139	per ton of pollutants removed in 2021 dollars

Data Inputs

Select the type of oxidizer: Catalytic Oxidizer - Fixed Bed

Enter the following information for your emission source:

Composition of Inlet Gas Stream

Pollutant Name	Concentration (ppmv)	Lower Explosive Limit (LEL) (ppmv)*	Heat of Combustion (Btu/scf)	Molecular Weight
VOC	1.2	21,000	2,353	44.09

Note: The lower explosion limit (LEL), heat of combustion and molecular weight for some commonly used VOC/HAP are provided in the table below.

Enter the design data for the proposed oxidizer:

Number of operating hours/year	8,760	hours/year	
Inlet volumetric flow rate(Q_{wi}) at 77°F and 1 atm.	160,000	scfm	
Inlet volumetric flow rate(Q_{wi}) (actual conditions)	157,000	acfm	
Pressure drop (ΔP)	23	inches of water*	* 23 inches of water is the default pressure drop for thermal oxidizers; 19 inches of water is the default pressure drop for catalytic oxidizers. Enter actual value, if known.
Motor/Fan Efficiency (ε)	60	percent*	* 60% is a default fan efficiency. User should enter actual value, if known.
Inlet Waste Gas Temperature (T_{wi})	100	°F*	* 100°F is a default temperature. User should enter actual value, if known.
Operating Temperature (T_{fi})	900	°F	* Note: Default value for Tfi is 900°F for catalytic oxidizers. Use actual value if known. Tfi for catalytic oxidizers is typically between 300 and 900°F.
Destruction and Removal Efficiency (DRE)	95	percent	
Estimated Equipment Life	15	Years	
Catalyst Data:			
Estimated catalyst life (y)	4	years	* 4 years is a default value. User should enter actual value, if known.
Catalyst Unit Cost (CC)	0	$/ft^3	
Space velocity for catalyst (Φ)	30,000	/hour	* 30,000 per hour is a default value. User should enter actual value, if known.

Percent Energy Recovery (HR) = 70 percent

Enter the cost data:

Desired dollar-year	2021			
CEPCI* for 2021	686.7	Enter the CEPCI value for 2021	390.6	1999 CEPCI
Annual Interest Rate (i)	4.25	Percent		
Electricity ($Cost_{elect}$)	0.0786	$/kWh		
Natural Gas Fuel Cost ($Cost_{fuel}$)	0.0061	$/scf		
Operator Labor Rate	$23.00	per hour		
Maintenance Labor rate	$32.00	per hour		
Contingency Factor (CF)	10.0	Percent		

* 10 percent is a default value for construction contingencies. User may enter values between 5 and 15 percent.

* CEPCI is the Chemical Engineering Plant Cost Escalation/De-escalation Index. The use of CEPCI in this spreadsheet is not an endorsement of the index for purposes of cost escalation or de-escalation, but is there merely to allow for availability of a well-known cost index to spreadsheet users. Use of other well-known cost indexes (e.g., M&S) is acceptable.

Cost Effectiveness

Cost Effectiveness = (Total Annual Cost)/(Annual Quantity of VOC/HAP Pollutants Destroyed)

Total Annual Cost (TAC) =	$1,539,367	per year in 2021 dollars
CO/VOC Destroyed =	67.2	tons/year
Cost Effectiveness =	$22,893	per ton of pollutants removed in 2021 dollars

Data Inputs

Select the type of oxidizer: Catalytic Oxidizer - Fixed Bed

Enter the following information for your emission source:

Composition of Inlet Gas Stream				
Pollutant Name	Concentration (ppmv)	Lower Explosive Limit (LEL) (ppmv)*	Heat of Combustion (Btu/scf)	Molecular Weight
VOC	8	21,000	2,353	44.09

Note: The lower explosion limit (LEL), heat of combustion and molecular weight for some commonly used VOC/HAP are provided in the table below.

Enter the design data for the proposed oxidizer:

Number of operating hours/year	8,760	hours/year	
Inlet volumetric flow rate(Q_{wi}) at 77°F and 1 atm.	105,000	scfm	
Inlet volumetric flow rate(Q_{wi}) (actual conditions)	110,000	acfm	
Pressure drop (ΔP)	23	inches of water*	* 23 inches of water is the default pressure drop for thermal oxidizers; 19 inches of water is the default pressure drop for catalytic oxidizers. Enter actual value, if known.
Motor/Fan Efficiency (ε)	60	percent*	* 60% is a default fan efficiency. User should enter actual value, if known.
Inlet Waste Gas Temperature (T_{wi})	100	°F*	* 100°F is a default temperature. User should enter actual value, if known.
Operating Temperature (T_{fi})	900	°F	* Note: Default value for Tfi is 900°F for catalytic oxidizers. Use actual value if known. Tfi for catalytic oxidizers is typically between 300 and 900°F.
Destruction and Removal Efficiency (DRE)	95	percent	
Estimated Equipment Life	20	Years*	* 20 years is the typical equipment life. User should enter actual value, if known.
Catalyst Data:			
Estimated catalyst life (y)	4	years	* 4 years is a default value. User should enter actual value, if known.
Catalyst Unit Cost (CC)	0	$/ft^3	
Space velocity for catalyst (Φ)	30,000	/hour	* 30,000 per hour is a default value. User should enter actual value, if known.

Percent Energy Recovery (HR) = 70 percent

Enter the cost data:

Desired dollar-year	2021			
CEPCI* for 2021	686.7	Enter the CEPCI value for 2021	390.6	1999 CEPCI
Annual Interest Rate (i)	4.25	Percent		
Electricity ($Cost_{elect}$)	0.0786	$/kWh		
Natural Gas Fuel Cost ($Cost_{fuel}$)	0.0061	$/scf		
Operator Labor Rate	$23.00	per hour		
Maintenance Labor rate	$32.00	per hour		
Contingency Factor (CF)	10.0	Percent		

* 10 percent is a default value for construction contingencies. User may enter values between 5 and 15 percent.

* CEPCI is the Chemical Engineering Plant Cost Escalation/De-escalation Index. The use of CEPCI in this spreadsheet is not an endorsement of the index for purposes of cost escalation or de-escalation, but is there merely to allow for availability of a well-known cost index to spreadsheet users. Use of other well-known cost indexes (e.g., M&S) is acceptable.

* 10 percent is a default value for construction contingencies. User may enter values between 5 and 15 percent.

* CEPCI is the Chemical Engineering Plant Cost Escalation/De-escalation Index. The use of CEPCI in this spreadsheet is not an endorsement of the index for purposes of cost escalation or de-escalation, but is there merely to allow for availability of a well-known cost index to spreadsheet users. Use of other well-known cost indexes (e.g., M&S) is acceptable.

Cost Estimate

Direct Costs			
Total Purchased equipment costs (in 2021 dollars)			
Incinerator + auxiliary equipment[a] (A) =			
Equipment Costs (EC) for Regenerative Oxidizer	=[2.664 x 100,000 + (13.98 x Qtot)] x (2021 CEPI/2016 CEPCI) =	$2,379,742	in 2021 dollars
	7.671232877		
Instrumentation[b] =	0.10 × A =	$237,974	
Sales taxes =	0.03 × A =	$71,392	
Freight =	0.05 × A =	$118,987	
	Total Purchased equipment costs (B) =	$2,808,095	in 2021 dollars

Footnotes
a - Auxiliary equipment includes equipment (e.g., duct work) normally not included with unit furnished by incinerator vendor.
b - Includes the instrumentation and controls furnished by the incinerator vendor.

Direct Installation Costs (in 2021 dollars)			
Foundations and Supports =	0.08 × B =	$224,648	
Handlong and Errection =	0.14 × B =	$393,133	
Electrical =	0.04 × B =	$112,324	
Piping =	0.02 × B =	$56,162	
Insulation for Ductwork =	0.01 × B =	$28,081	
Painting =	0.01 × B =	$28,081	
Site Preparation (SP) =		$0	
Buildings (Bldg) =		$0	
	Total Direct Installaton Costs =	$842,429	
Total Direct Costs (DC) =	Total Purchase Equipment Costs (B) + Total Direct Installation Costs =	$3,650,524	in 2021 dollars

Total Indirect Installation Costs (in 2021 dollars)			
Engineering =	0.10 × B =	$280,810	
Construction and field expenses =	0.05 × B =	$140,405	
Contractor fees =	0.10 × B =	$280,810	
Start-up =	0.02 × B =	$56,162	
Performance test =	0.01 × B =	$28,081	
	Total Indirect Costs (IC) =	$786,267	
Continency Cost (C) =	CF(IC+DC)=	$443,679	
Total Capital Investment =	**DC + IC +C =**	**$4,880,470**	**in 2021 dollars**

Direct Annual Costs			
Annual Electricity Cost	= Fan Power Consumption × Operating Hours/year × Electricity Price =	$306,123	
Annual Fuel Costs for Natural Gas	= $Cost_{fuel}$ × Fuel Usage Rate × 60 min/hr × Operating hours/year	$721,926	
Operating Labor	Operator = 0.5hours/shift × Labor Rate × (Operating hours/8 hours/shift)	$12,593	
	Supervisor = 15% of Operator	$1,889	
Maintenance Costs	Labor = 0.5 hours/shift × Labor Rate × (Operating Hours/8 hours/shift)	$17,520	
	Materials = 100% of maintenance labor	$17,520	
Direct Annual Costs (DC) =		**$1,077,570**	**in 2021 dollars**

Indirect Annual Costs			
Overhead	= 60% of sum of operating, supervisor, maintenance labor and maintenance materials	$29,713	
Administrative Charges	= 2% of TCI	$97,609	
Property Taxes	= 1% of TCI	$48,805	
Insurance	= 1% of TCI	$48,805	
Capital Recovery	= CRF[TCI-1.08(cat. Cost)]	$367,108	
Indirect Annual Costs (IC) =		**$592,040**	**in 2021 dollars**
Total Annual Cost =	**DC + IC =**	**$1,669,610**	**in 2021 dollars**

Cost Effectiveness

Cost Effectiveness = (Total Annual Cost)/(Annual Quantity of VOC/HAP Pollutants Destroyed)

Total Annual Cost (TAC) =	$1,669,610	per year in 2021 dollars
CO/VOC Pollutants Destroyed =	223.5	tons/year
Cost Effectiveness =	$7,471	per ton of pollutants removed in 2021 dollars

Data Inputs

Select the type of oxidizer: Catalytic Oxidizer - Fixed Bed

Enter the following information for your emission source:

Composition of Inlet Gas Stream				
Pollutant Name	Concentration (ppmv)	Lower Explosive Limit (LEL) (ppmv)*	Heat of Combustion (Btu/scf)	Molecular Weight
VOC	8	21,000	2,353	44.09

Note: The lower explosion limit (LEL), heat of combustion and molecular weight for some commonly used VOC/HAP are provided in the table below.

Enter the design data for the proposed oxidizer:

Number of operating hours/year	8,760	hours/year	
Inlet volumetric flow rate(Q_{wi}) at 77°F and 1 atm.	115,000	scfm	
Inlet volumetric flow rate(Q_{wi}) (actual conditions)	120,000	acfm	
Pressure drop (ΔP)	23	inches of water*	* 23 inches of water is the default pressure drop for thermal oxidizers; 19 inches of water is the default pressure drop for catalytic oxidizers. Enter actual value, if known.
Motor/Fan Efficiency (ε)	60	percent*	* 60% is a default fan efficiency. User should enter actual value, if known.
Inlet Waste Gas Temperature (T_{wi})	100	°F*	* 100°F is a default temperature. User should enter actual value, if known.
Operating Temperature (T_{fi})	900	°F	* Note: Default value for Tfi is 900°F for catalytic oxidizers. Use actual value if known. Tfi for catalytic oxidizers is typically between 300 and 900°F.
Destruction and Removal Efficiency (DRE)	95	percent	
Estimated Equipment Life	20	Years*	* 20 years is the typical equipment life. User should enter actual value, if known.
Catalyst Data:			
Estimated catalyst life (y)	4	years	* 4 years is a default value. User should enter actual value, if known.
Catalyst Unit Cost (CC)	0	$/ft^3	
Space velocity for catalyst (Φ)	30,000	/hour	* 30,000 per hour is a default value. User should enter actual value, if known.

Percent Energy Recovery (HR) = 70 percent

Enter the cost data:

Desired dollar-year	2021			
CEPCI* for 2021	686.7	Enter the CEPCI value for 2021	390.6	1999 CEPCI
Annual Interest Rate (i)	4.25	Percent		
Electricity ($Cost_{elect}$)	0.0786	$/kWh		
Natural Gas Fuel Cost ($Cost_{fuel}$)	0.0061	$/scf		
Operator Labor Rate	$23.00	per hour		
Maintenance Labor rate	$32.00	per hour		
Contingency Factor (CF)	10.0	Percent		

* 10 percent is a default value for construction contingencies. User may enter values between 5 and 15 percent.

* CEPCI is the Chemical Engineering Plant Cost Escalation/De-escalation Index. The use of CEPCI in this spreadsheet is not an endorsement of the index for purposes of cost escalation or de-escalation, but is there merely to allow for availability of a well-known cost index to spreadsheet users. Performance test =	0.01 × B =	$4,916	
	Total Indirect Costs (IC) =	$137,637	
Continency Cost (C) =	CF(IC+DC)=	$77,666	
Total Capital Investment =	**DC + IC +C =**	**$854,330**	**in 2021 dollars**

Direct Annual Costs			
Annual Electricity Cost	= Fan Power Consumption × Operating Hours/year × Electricity Price =	$38,265	
Annual Fuel Costs for Natural Gas	= $Cost_{fuel}$ × Fuel Usage Rate × 60 min/hr × Operating hours/year	$624,582	
Operating Labor	Operator = 0.5hours/shift × Labor Rate × (Operating hours/8 hours/shift)	$12,593	
	Supervisor = 15% of Operator	$1,889	
Maintenance Costs	Labor = 0.5 hours/shift × Labor Rate × (Operating Hours/8 hours/shift)	$17,520	
	Materials = 100% of maintenance labor	$17,520	
Direct Annual Costs (DC) =		**$712,369**	**in 2021 dollars**

Indirect Annual Costs			
Overhead	= 60% of sum of operating, supervisor, maintenance labor and maintenance materials	$29,713	
Administrative Charges	= 2% of TCI	$17,087	
Property Taxes	= 1% of TCI	$8,543	
Insurance	= 1% of TCI	$8,543	
Capital Recovery	= CRF x TCI	$64,263	
Indirect Annual Costs (IC) =		**$128,149**	**in 2021 dollars**
Total Annual Cost =	**DC + IC =**	**$840,517**	**in 2021 dollars**

Cost Effectiveness

Cost Effectiveness = (Total Annual Cost)/(Annual Quantity of VOC/HAP Pollutants Destroyed)

Total Annual Cost (TAC) =	$840,517	per year in 2021 dollars
CO/VOC Pollutants Destroyed =	33.2	tons/year
Cost Effectiveness =	$25,292	per ton of pollutants removed in 2021 dollars

Data Inputs

Select the type of oxidizer: Regenerative Thermal Oxidizer

Enter the following information for your emission source:

Composition of Inlet Gas Stream

Pollutant Name	Concentration (ppmv)	Lower Explosive Limit (LEL) (ppmv)*	Heat of Combustion (Btu/scf)	Molecular Weight
VOC	78	21,000	2,353	44.09

Note: The lower explosion limit (LEL), heat of combustion and molecular weight for some commonly used VOC/HAP are provided in the table below.

Enter the design data for the proposed oxidizer:

Number of operating hours/year	8,760	hours/year	
Inlet volumetric flow rate(Q_{wi}) at 77°F and 1 atm.	15,000	scfm	
Inlet volumetric flow rate(Q_{wi}) (actual conditions)	15,000	acfm	
Pressure drop (ΔP)	19	inches of water	* 23 inches of water is the default pressure drop for thermal oxidizers; 19 inches of water is the default pressure drop for catalytic oxidizers. Enter actual value, if known.
Motor/Fan Efficiency (ε)	60	percent*	* 60% is a default fan efficiency. User should enter actual value, if known.
Inlet Waste Gas Temperature (T_{wi})	100	°F*	* 100°F is a default temperature. User should enter actual value, if known.
Operating Temperature (T_{fi})	1,900	°F	* Note: Default value for Tfi is 2000°F for thermal regenerative oxidizers. Use actual value if known. Tfi for regenerative oxidizers typically between 1800 and 2000°F.
Destruction and Removal Efficiency (DRE)	95	percent	
Estimated Equipment Life	20	Years*	* 20 years is the typical equipment life. User should enter actual value, if known.
Heat Loss (η)	1	percent*	* 1 percent is a default value for the heat loss. User should enter actual value, if known. Heat loss is typically between 0.2 and 1.5%.

Percent Energy Recovery (HR) = 70 percent

Cost Effectiveness =	$10,667	per ton of pollutants removed in 2021 dollars

Appendix L
Coating - VOC Control Option Supporting Data

5.5.2.3 Control Assessment for the Coating Operations

Since the original permit application submittal, Fritz Winter has identified a U.S. manufactured and supplied coating that contained less xylene (4% rather than 6%) that will be used in the parts coating operation. However, the new formulation does result in a slightly higher VOC content. Refer to EXHIBIT E for the new Safety Data Sheets (SDS). Based on the latest production schedule Fritz Winter anticipates that peak production for Phase 1 equipment will be reached in 2019, with uncontrolled VOC emissions from the coating operations peaking at 16.1 TPY. Peak production for Phase 2 equipment will be reached in 2022, with uncontrolled VOC emissions from the coating operations peaking at 26 TPY and uncontrolled xylene emissions peaking at 5.4 TPY. A separate BACT cost effectiveness calculation has been completed for both Phase 1 and Phase 2 production.

Since the original permit application submittal, Fritz Winter has contacted numerous vendors of pollution control devices to obtain quotes for installation of a carbon adsorption/ regeneration system that DAQ determined to represent BACT in the current permit. Most vendors contacted did not offer onsite regeneration units or considered the relatively small amount of VOC emitted did not warrant a carbon regeneration system especially considering there is no way to recover or reuse the VOC in the process. They encouraged more cost effective control technologies. The vendors stated that onsite regeneration of activated carbon is viable only when the quantities of VOC are much greater and when the recoverable material is intended for re-used in the process. Fritz Winter did obtain cost estimates from two vendors for a regenerative carbon adsorption system as well as two quotes from vendors of RTOs for comparison. The actual vendor communications are provided in EXHIBIT H.

Evaluation of the traditional EPA BACT cost effectiveness calculation spreadsheet for a carbon adsorption system with actual vendor quotes, indicated that the cost of a carbon adsorption system is higher than the EPA spreadsheet used for the original permit application would indicate. Evaluation of the traditional EPA BACT cost effectiveness calculation spreadsheet for an RTO with actual vendor quotes indicated that the cost of an RTO is lower than the EPA spreadsheets appear to indicate. The lowest cost of the two vendor quotes was then inserted into the cost effectiveness calculations and the new cost effective results are provided in Table 5-3.

Table 5-3: Revised Cost Effectiveness Results with Vendor Quotes

Control Device	Original Application	Cost Effectiveness $/ton	
		End of Phase Construction	Revised Cost
Biofilter	$11,029	Phase 1	$43,385
		Phase 2	$26,866
Activated Carbon with Regeneration	$27,123	Phase 1	$47,410
		Phase 2	$29,357
Regenerative Thermal Oxidizer (RTO)	$27,609	Phase 1	$23,788
		Phase 2	$14,731

The revised cost effectiveness spreadsheet for a Biofilter is presented in Table 5-4a. The revised cost effectiveness spreadsheet for an n Activated Carbon unit with Regeneration is presented in Table 5-4b. The revised cost effectiveness spreadsheet for an RTO is presented in Table 5-4c. The results show that none of the control technologies are cost effective.

TABLE 5-4a Cost Effectiveness Evaluation for a Biofilter on the Coating Operation

TOTAL ANNUAL COST SPREADSHEET PROGRAM--BIOFILTER
Fritz Winter Paint Spray Booths Cost Effectiveness Calculation

Cost or Process Item	Data	Basis for Estimate
CPI Base Year (1998):	1,000	
CPI (2016):	1,474	Adjustment of captical cost for inflation per Consumer Price Index
INPUT PARAMETERS		
-- Gas flowrate (scfm):	17,425	Waste gas flow of 275,500 acfm @ 132 F reduced to standard conditons
-- Reference temperature (oF):	68	Standard temperature in Fahrenheight
-- Inlet gas temperature (oF):	93	Outlet exhaust temperature from booth
-- Inlet gas density (lb/scf):	0.0752	Density of air at standard conditions
TOTAL CAPITAL INVESTMENT ($)	502,662	Based on Correlation with SCFM presented in "Biofiltration of Ethanol Emissions from Bakery Operations" 99-371 Govind, Fangl and Melarkode
'Escalated to current dollars:	740,924	Cost in current dollars adjust by CPI
Annual interest rate (fraction):	0.06	Current average interest rate on working capital (SBA 6 to 7%)
Control system life (years):	10	Typical life of process equipment in this service
Capital recovery factor:	0.1359	Calculated from interest rate and life cycle
Taxes, insurance, admin. factor:	0.040	Typical additional cost factor for capital projects
Pressure drop (in. w.c.):	20	
ANNUAL COSTS		
Item	Cost ($/yr)	
Operating Cost including power,media replacer	302768	Based on Correlation with SCFM presented in "Biofiltration of Ethanol Emissions from Bakery Operations" 99-371 Govind, Fangl and Melarkode
Taxes, insurance, administrative	29,637	Standard tax and insurance rates
Capital recovery	100,668	Capital recovery based on above stated interest rate and life cycle
Total Annual Cost	433,073	Total Annual cost
Cost Effectiveness Assessment		
VOC Inlet	16.1	Total VOC emitted at maximum production after Phase 1
DRE	62%	Estimated DRE for RTO operation
VOC Removed	10.0	Total VOC Destruction Phase 1
Cost Effectiveness	**43,385 $/ton**	Cost Effectiveness $/ton (after Phase 1)
VOC Inlet	26.0	Total VOC emitted at maximum production after Phase 2
DRE	62%	Estimated DRE for RTO operation
VOC Removed	16.1	Total VOC Destruction Phase 2
Cost Effectiveness	**26,866 $/ton**	Cost Effectiveness $/ton (after Phase 2)

TABLE 5-4b Cost Effectiveness Evaluation for an Activated Carbon with Regeneration on the Coating Operation (revised)

TOTAL ANNUAL COST SPREADSHEET PROGRAM--CARBON ADSORPTION w/REGENERATION
Fritz Winter Paint Spray Booths Cost Effectiveness Calculation

Cost or Process Item	Data	Basis for Estimate
CPI Base Year (2016):	1,000	
CPI (2016):	1,000	Adjustment of captical cost for inflation per Consumer Price Index
INPUT PARAMETERS:		
-- Inlet stream flowrate (acfm):	18,250	Estimated actual air flow out of the coating booths
-- Inlet stream temperature (oF):	93	Estimated temperaterature leaving the booth
-- Inlet stream pressure (atm):	1	System is not under pressure or vacuum
-- VOC to be oxidized:	100%	No VOC can be recovered during desorption all oxidized
-- Inlet VOC flowrate (lb/hr):	5.78	Average hourly emissions of VOC
-- VOC molecular weight (lb/lb-mole):	106.00	Molecular weight of Xylene the primary component
-- VOC inlet volume fraction:	2.01E-05	Calculated from above lb moles of xylene/ lb moles of air
-- VOC inlet concentration (ppmv):	20	mole fraction in ppm form
-- VOC inlet partial pressure (psia):	0.00030	mole fraction in partial pressure form
-- Required VOC removal (fraction):	0.9	Highly adsorptive compounds such as xylene and C9 aromatics comprise only 80% of the total mixture remainder are much lower adsorption capacity
-- Freundlich isotherm equation constants for VOC (see Table 1 below):		
VOC number (enter Table 1 # or zero, if no data):	1,008	Freundlich Isotherm parameters for Xylene
K:	0.708	
M:	0.113	
-- Yaws isotherm equation constants (see Table 2 below):		
VOC number (enter Table 2 #or zero, if no data):	533	Yaw Isotherm parameters for Xylene
A:	1.31522	
B:	0.14019	
C:	-0.01457	
-- Adsorption time (hr):	168.0	Assumes one adsorber operates through entire week of operation
-- Desorption time (hr):	24.0	Time to prepare adsorber by heating to desorb and burning the vent gases
-- Number of adsorbing vessels:	2	Allows for a spare adsorber to come on line after breakthrough
-- Superficial carbon bed velocity (ft/min):	75	Average design value for adsorbers - gas velocity at cross sectional area
-- Carbon price ($/lb):	2.00	Current cost of carbon
-- Material of construction (see list below):[4]	1	Stainless steel (316) construction - corrosion resistant
DESIGN PARAMETERS:		
-- Carbon equilibrium capacity--Freundlich (lb VOC/lb carb):	0.2826	Determined from Freunlich Isotherm
" " " -- Yaws et al " " " "	0.2973	Determined from Yaws isotherm
-- Carbon working capacity (lb VOC/lb carbon):	0.14	Half of minimum theoretical equilibriam capacity since regenerated carbon does not return to virgin capacity
-- Number of desorbing vessels:	1	
-- Total number of vessels:	3	Allows 2 adsorbers in operation at all times to prevent breakthrough
-- Carbon requirement, total (lb):	10308	
-- Carbon requirement per vessel (lb):	3436	
-- Gas flowrate per vessel (acfm):	18250	Two adsorbers in series both treating total air flow
-- Adsorber vessel diameter (ft):	17.602	
-- Adsorber vessel length (ft):	4.471	
-- Adsorber vessel surface area (ft2):	733.88	
-- Carbon bed thickness (ft):	0.471	
-- Carbon bed pressure drop (in. w.c.): [5]	1.592	
CAPITAL COSTS		
Equipment Costs ($):		
Direct Captial Costs (DC)		
Purchased Equiment Costs (PE)		
Carbon Ad & Instrumentation	$550,000.00	Vendor Quote
Instrumentation	55,000	Cost Manual states 10% of equipment cost includes instrumentation to incorporate into the plant digital operating system
Ductwork	$32,000.00	
Sales Taxes	$33,000.00	6% (Sales tax in Texas which is the location of one of the vendors)
Freight	$27,500.00	5% of Equipment per Cost Manual
PE Total:	$697,500.00	Sum
Direct Installation Costs (DI):	$209,250.00	30% of PE per Cost Manual
DC Total:	$906,750.00	Sum of PE + DI
Indirect Capital Costs (IC)		
IC Total:	$216,225.00	31% of PE per Cost Manual
Total Capital Investment (TCI)	**$1,122,975.00**	Sum of DC and IC
Adsorber vessels/boiler & incinerator	1,122,975	Vendor quote for cost of 3 SS adsorbers and boiler/incinerator adjusted for direct and indirect costs
-- Carbon	20,615	Initial carbon cost does not allow for any losses
-- Other equipment (fan, duct work cooling, etc.)	0	
Total equipment cost ($)--base:	1,804,868	Total cost based on a regression analysis on treated exhaust volume
" " " --escalated:	1,804,868	Escalated cost over 1999 dollars
Gas Fired Boiler	25,000	There is no boiler intended to be on site so this is a small 1,000 lb/hr gas fired low pressure boiler
Small Oxidizer (200 cfm)	0	The cost of a small straight through gas fired oxidizer
Total Adsorption equipment and support equipment	1,829,868	
Purchased Equipment Cost ($):	1,976,258	Includes cost of taxes and freight
Total Capital Investment ($):	3,181,775	Allows for direct and indirect cost of installation of equipment see EPA/452/B-02-001 Table 1.5
" " " ($/acfm):	174.3	

TABLE 5-4b Cost Effectiveness Evaluation for an Activated Carbon with Regeneration on the Coating Operation – continued

ANNUAL COSTS: Item	Cost ($/yr)	
Operating labor	18,615	Based on rates listed above and hours of operator time
Supervisory labor	2,792	Standard overhead labor rates
Maintenance labor	18,615	Based on rates listed above and hours of operator time
Maintenance materials	18,615	Assumes parts cost equals labor
Electricity	4,554	Power factors listed in EPA/452/B-02-001 Page 1-35
Steam	1,063	Based on rates listed above and hours of desorption
Gas Usage	1,806	Assuming 200 cfm air purge through adsorber during desorption and gas used to elevate temp to 1400 F
Carbon replacement	8,680	Carbon life listed above and cost to replace
Overhead	35,182	Standard labor overhead factors for above
Taxes, insurance, administrative	127,271	Standard tax and insurance rates
Capital recovery	449,770	Capital recovery based on above stated interest rate and life cycle
Total Annual Cost	**$ 686,964**	Total Annual cost
Cost Effectiveness Assessment

Cost Effectiveness		**14,731**	**$/ton**	Cost Effectiveness $/ton (after Phase 2)

For BACT comparison, Fritz Winter reviewed permits from similar facilities that practiced surface coating of iron cast parts, and identified three foundries. Their permits are provided in EXHIBIT H. Table 5-5 provides a list of the three facilities recently permitted that practice surface coating of iron cast parts. The agency issued permits for all three facilities do not require any kind of VOC treatment of emissions.

Table 5-5: Permit Requirements of Comparable Surface Coating Units at Iron Foundries

Iron Foundry	VOC Emissions	Permit Requirement
NIBCO Blytheville, AR	31 TPY	Filters on spray booths - no VOC controls
Asama Coldwater, MI	30 TPY	Filters on spray booths - no VOC controls
Brembo Homer, MI	43.5 TPY	Filters on spray booths - no VOC controls

5.5.3 SELECTION OF BACT SUMMARY FOR ALL THREE APPLICATIONS

For all three VOC generating operations Fritz Winter proposes a work practice for VOC BACT. Fritz Winter proposes a work practice for control of VOC from the PCS process by practicing and ensuring mold vent autoignition. The molds will be continuously observed by television monitors to ensure that the molds are autoigniting and the small burners are aimed appropriately so they will ignite any mold not already burning.

A work practice for the core shop is to ensure the pH of the sulfuric acid scrubber is maintained below a pH of 4.5 to ensure that amine is absorbed. As well as keep any unused resin containers closed.

A work practice proposed for the coating operation is to ensure any unused paint or solvent containers are covered at all times and the VOC content of the paint does not exceed 15%.

To: Mueller, Gerald R
Cc: Vandenberg, Robert
Subject: RE: Regenerative Carbon Adsorption

Hello Gerald

It was good to talk to you yesterday. As I mentioned to you, and assuming your client wants a long term solution, RTO may be the way to go here. I have copied my colleague, Mr. Robert Vandenberg who can help you with RTO pricing. Robert's contact information is:

Robert Vandenberg
Regional Sales Manager
Babcock & Wilcox MEGTEC
Direct: (920)-337-1489
Mobile: (920)-360-1105
rvandenberg@megtec.com

Carbon Adsorption Technology is technically viable here and given below are some rough order of magnitude numbers for both a **non-regenerable carbon adsorption system** (where the carbon is taken out of the system and replaced on an on-going basis) and an **onsite steam regenerable carbon adsorption system** you can use to see if this is economically viable or not. Feel free to modify the numbers as you see appropriate.

Design Basis

Air Flow: 18,250 CFM
Temperature: 93 degree F
VOC/Solvent Loading: 4.5 lbs/hour of mainly xylenes with some butyl acetate and ethyl benzenes

Non Regenerable Carbon Adsorption System

Capital Costs
Equipment Cost (blower, adsorber, carbon, controls, interconnecting ductwork and stack): ~ $300,000.00
Installation Cost (say an additional 50% of Equipment Cost): ~ $150,000.00

Operating Costs
Power: ~ 50kW or 1200 kwH/day or **$ 90 /day** based on $0.075/kwH cost.
Carbon Replacement: **$ 900.00 per day** based on ~30 wt% capacity of VOCs on carbon and $2.50 per lb carbon replacement cost.
Labor and Maintenance: Minimal

Steam Regenerable Carbon Adsorption System

Capital Costs
Equipment Cost: ~ $1,500,000.00
Installation Cost (based on additional 50% of equipment cost): $750,000.00

Operating Costs

Power: Similar to above say **$120.00/day**
Steam: Minimal say **$ 5.50/day** (based on cost of steam of $10/1000 lbs)
Labor and Maintenance: say **$50,000 per year**

I hope this information is helpful.

Best Regards,

Subject: Dürr Systems, Inc. Budgetary Proposal No. US04-83177

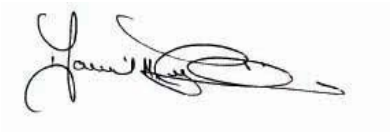
Dear Mr. Mueller:

Dürr Systems, Inc. is pleased to offer this budgetary proposal to supply an **Ecopure**® RL Regenerative Thermal Oxidizer (RTO) and Filter Box system to treat the VOCs from your process exhaust. The choice of the RL unit from our range of control technology options is based on an analysis of your actual process conditions, utility costs and space considerations:

- Limited space: The RL offers the lowest footprint of any RTO on the market and will fit within your designated area.
- Limited installation window: The Dürr **Ecopure**® RL is a unique pre-assembled modular RTO designed for easy installation.
- Ease of operation and low maintenance: The RL uses a single rotary valve with machined seats and air seals instead of multiple inlet, outlet and purge dampers.

We invite you to visit our fabrication facilities or a local site to see the benefits of this unit first hand. Please contact me to arrange a site visit or if you require additional information.

Best regards,
Dürr Systems, Inc.



David Tyksinski

This proposal contains confidential and proprietary information of Dürr Systems, Inc. (CTS) and is not to be disclosed to any third parties without the express prior written consent of Dürr Systems. This proposal is submitted solely for the purpose of enabling the client to evaluate Dürr Systems bid on the project within and shall be returned to Dürr or destroyed if so requested by Dürr Systems, Inc.

1 Executive summary

We completed a full technical review of the process and source parameters sent with your request for quotation. We have determined that the use of a concentrator system is not recommended due to the amount of particulate/dust in the source air stream.

For this reason we have elected to propose a stand-alone filter house and RL thermal oxidizer system for abating the process air stream.

The enclosed proposal details a complete engineered thermal oxidizer system designed to abate VOC-contaminated exhaust air from your Foundry painting process. The proposed system will utilize a new Dürr RL rotary valve regenerative thermal oxidizer (RTO) to provide a robust, proven system that will achieve an overall system efficiency of 99% VOC destruction while providing up to 95% thermal efficiency.

Our proposal is based on your design inputs of flow, temperature, static pressure, VOC loading and VOC composition. Dürr would like to highlight some of the advantages that the RL design offers:

- ***Lower Inlet Pressure Fluctuations:*** Since the RL has 12 segmented beds (5 inlet and 5 outlet at any time) and only switches the direction of 20% of the air at each valve index, the RL generates < 12% variance from the inlet static pressure set-point, for a typical pressure fluctuation at the process of +/– 0.1 spwg .

- ***Lower Operating Costs:*** The RL typically operates at a lower combustion temperature set point than two-tower technology. A 2 bed system must run a long cycle time in order to achieve high DRE (> 98%). This extended cycle time results in a large variation in bed-preheat temperature entering the combustion chamber, which increases burner output cycling and gas usage. Since the RL only switches a small fraction of air during each index there is a shorter regeneration period and a smoother CC temp curve. This allows the RL to operate at a lower CC temperature, resulting in lower operating costs and reduced thermal shock to the heat recovery media.

- ***Greater Destruction Efficiency:*** The Dürr RL will easily achieve 99% DRE due to the integral flush system and valve air seal. It is difficult for a two-tower system to achieve >98 DRE. Achieving >98 DRE may require the addition of a 'puff chamber' and/or further extending the valve cycle time. If the puff chamber is used, additional volume and pressure fluctuations are introduced to the system resulting in additional operating costs. If the valve timing is extended to attain dRe, the thermal efficiency is sacrificed. In addition, if a lower destruction efficiency is required, the RL can operate at a lower combustion chamber temperature, resulting in lower operation costs.

- ***Less maintenance:*** The rotary valve in the Dürr RL is supported by a constant pressure air spring which creates a continuous seal against the stator as the valve advances. A typical two-tower system utilizes multiple inlet and outlet valves and actuators that need to be maintained. Competitive two-tower type rotary valve systems require pneumatic cylinders to actuate the valve. The constant motion of the pneumatic cylinder wears the center drive shaft prematurely. Additionally, the lip seals of the pneumatic cylinder require replacement yearly. Dürr has many installations with proven uptime in excess of 99%. The cost of downtime should never be overlooked in the purchase of any RTO.

Please click **HERE** to view a video about RL operation and installation.

1.1 Why Dürr?

Dürr is the one and only company for your environmental and energy solutions, from the initial planning stages to decades after the RL has been installed. We conduct the necessary engineering studies and analyses to ensure the right equipment design for your company's compliance needs.

Dürr is a worldwide company operating in 28 countries. The North American office is strategically located in Southfield, Michigan in a 226,745 ft^2 facility that is QS-9000/TE certified.

Dürr skills, strength and resources are that:

- We are the air pollution technology leader with the widest range of technology options available to solve your specific application and compliance issues.
- With over four decades of experience, Dürr will apply the proper application and complete integration of available technology.
- We provide 24 hour/7 days a week global service and support for Dürr and competitor systems.
- We employ dedicated, hardworking individuals whose number one goal is to provide you with the best product and experience possible.

Following a detailed analysis of your process conditions and parameters and a review of all the available solutions, we conclude that the **Ecopure**® RL is the best system for your application. The RL is a state-of-the-art RTO design featuring a single rotary diverter valve, twelve heat recovery chambers enclosed in a single tower, and structured ceramic heat exchange media for maximum thermal efficiency and the lowest operating costs. The modular RL system is designed for maximum pre-assembly in the factory ensuring quality and minimal field installation time.

The Filter Box and RL-50 unit proposed is designed to treat 45,000 SCFM of exhaust from your Foundry Spraying process and offers the highest destruction efficiency of any RTO available on the market. The following are some of the key features of the RL system:

Standard RL Features	Customer Benefits
Skid mounted design (pre-piped, pre-wired)	Fast installation reduces cost
Single rotary valve	Reduced maintenance, increased reliability, high destruction efficiency
Integral air-conditioned control room	No need to find space for control panel, and pre-wiring reduces installation cost
Rotary valve is always in contact with hot exhaust gas	Reduces potential build-up of condensables on valve
Electric rotary valve drive	Increased reliability over hydraulic or pneumatic systems.
All drive components external to unit	Ease of access for maintenance
All fuel train components located at grade	Ease of access for maintenance
Compact design	Reduced foundation costs
Twelve heat recovery chamber design	Minimal pressure fluctuations Better air distribution Improved RTO performance
Continuous purge	Maximizes destruction efficiency
Bakeout	Reduces organic buildup and improves energy efficiency
Variable frequency drive (VFD)	Minimizes energy usage
Fresh air/purge damper	Independent start-up from RTO

Our proposal is for a RTO system to be delivered to your facility. Optional installation services and freight to site are included for your consideration, as well as clarifications on utilities and other services to be provided for the installation.

1.3 Equipment pricing and schedule

1.3.1 Budgetary Equipment Pricing

Item 1 – Equipment One (1) **Ecopure**® RL-50 & Filter Box as described within. FCA Origin.	$920,000
Item 2 – Installation of Item 1 Installation of RL	$150,000
Item 3 – Freight - pre pay and add Budget cost for Item 1	$ 33,300
Item 4 – Installation Supervision Durr includes 150 hours of installation supervision. Additional labor required due to circumstances beyond Durr's control is per Durr standard rates attached.	$ 26,500
Item 5 – Start-up / Commissioning & Training Durr includes 150 hours of Start-up / commissioning and Training (training must coincide and immediately follow startup and commissioning activities). Additional labor required due to circumstances beyond Durr's control is per Durr standard rates attached.	$ 22,500

Pricing issued for informational purposes only. No purchase order will be accepted based on this proposal

All prices exclude any taxes, duties, broker fees, value-added taxes, income taxes, withholding taxes or any other allowances.

1.3.2 Typical Payment terms and payment schedule

25% due upon receipt and acceptance of purchase order
25% invoiced with drawing submittal, due net 30 days
45% due upon equipment ready for shipment, due net 30 days
5% due after successful performance testing
- Or - thirty days after equipment is made operational
- Or - if due to delays beyond Dürr's control, 90 days after final material shipment, whichever occurs first

Dürr will furnish detailed project schedule to meet the customer's needs after receipt and acceptance of purchase order.

1.3.3 Typical delivery milestones

RTO delivery	20-24 weeks*
RTO installation	1-2 additional weeks
System start-up	1-2 additional weeks

*RTO delivery to be confirmed at the time a purchase order is issued by buyer and accepted by Dürr

If for any reason this information is withheld from Dürr, the third milestone payment will be due net 0 days.

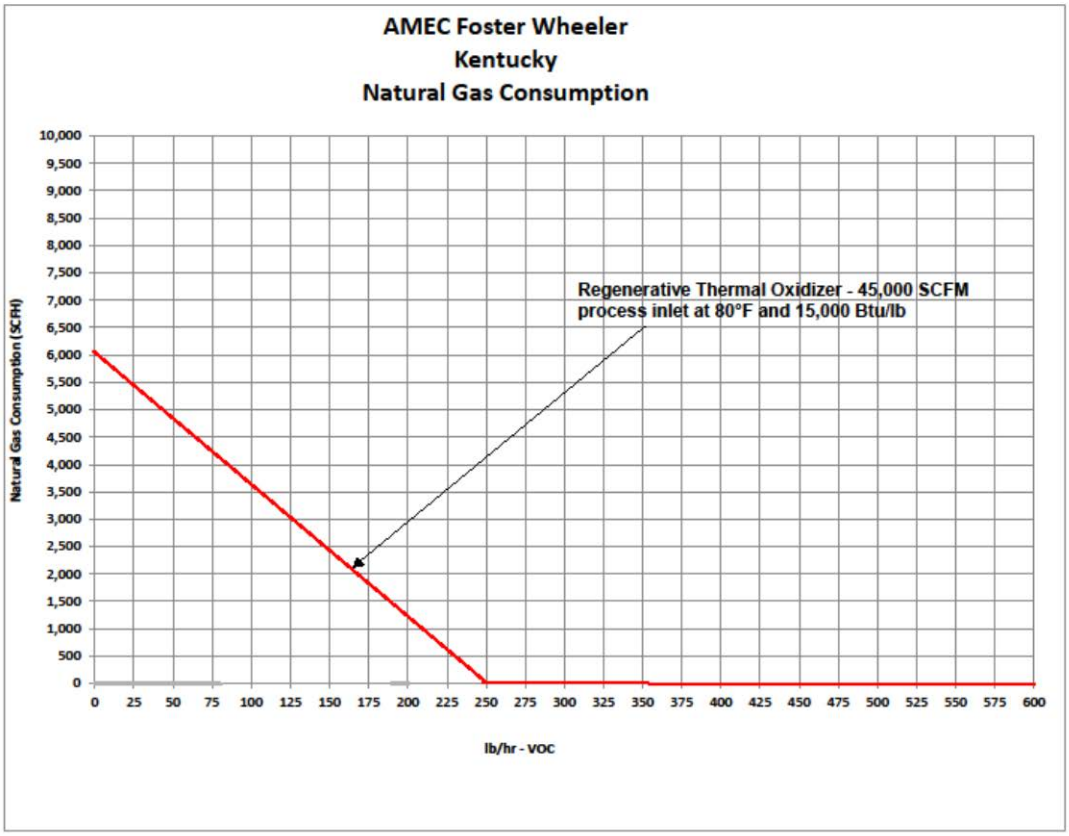
1.4 Estimated operating conditions

The following estimates of operating energy for the proposed RL unit are based on the process data provided:

Process exhaust: 45,000 SCFM @ 80 F
VOC Loading: 100 Lbs./Hr. (Assumed)



1.5 Performance guarantee

1.5.1 Volatile organic compounds (VOCs)

Subject to the General Provisions below, Dürr guarantees that when the inlet VOC concentration is above **250** ppm_v as propane, the RTO will destroy or convert at least **98**% of the incoming gaseous, non-methane volatile organic compounds (Inlet VOC as identified in Section 2.0 of this document). When the inlet VOC concentration is below **250** ppm_v as propane, the outlet non-methane VOC concentration will not exceed **5** ppm_v as propane.

1.6 General provisions

The following General Provisions will apply to all of the above guarantees:

a) The RTO will be installed (if applicable), operated and maintained by Buyer in accordance with Dürr instructions. This will include replacing of consumable or replaceable components by Buyer, as required.
b) Buyer agrees to operate the system within the system design data as specified in this proposal.
c) The performance guarantees apply only during normal operation, not during any maintenance procedures.
d) All functional tests will be arranged and paid for by Buyer. Dürr will be notified in writing 14 days prior to the tests for scheduling purposes.
e) Methane is excluded from outlet emissions.
f) Dürr reserves the right to adjust the burner chamber operating temperature as required to meet the guarantees.

If Dürr fails to meet the Performance Guarantee, Dürr will be given reasonable time to investigate and take corrective action within the scope of this contract.

1.7 Work to be provided by buyer

- Supply the following utilities to the connection points on the RL
- Fuel: Adequate supply of Natural Gas at 1,000 Btu/ft³ and regulated to 5.0 PSI steady.
- Power: 480 V, 3 PH, 60 Hz, with earth grounding.
- Air: 2 CFM of intermittent compressed air at 80 psig. Clean, dry air, suitable for outdoor use at local plant conditions is required.
- Failsafe inlet isolation damper
- Barometric damper or vacuum relief damper.

1.8 Clarifications

- Buyer certifies that there are no halogenated, acid generating, silicon bearing or phosphor compounds present in the inlet air stream coming to the proposed equipment. This includes, but is not limited to, fluorides, chlorides, bromides, iodides, astanides and sulfonated compounds. This warranty excludes deterioration arising from the presence of any of these compounds.
- Buyer certifies that the total alkali metal content does not exceed 5% of the total particulate discharged from the dryer. If alkali metals are in gaseous or liquid phase, acceptable concentration to be determined.
- If present, silicon-bearing compounds may cause plugging of the ceramic media and may require periodic cleaning and/or replacement of the media.
- If present, phosphor compounds may cause permanent plugging of the ceramic media and therefore require replacement.
- Fan, valve, RL skid ductwork and stack insulation are not included.
- Installation and connection of any remote HMI is by purchaser.
- Unless noted otherwise in this proposal, the equipment quoted is to Dürr Systems, Inc. standard design specifications. Any specification not mentioned but required by owner is subject to review and price adjustment.
- Note that condensate will form from combining hot oven air sources and cooler spraybooth emissions. If no filtration is to be included for the system, bake-outs or cleaning of the RL may be required. Frequency of these bake-outs is dependent on the efficiency of the spraybooth scrubbers and the amount of condensate formed from the hot and cold sources.
- Optional installation by a Dürr erection crew or subcontractor is based on the following items:
  There are no overhead obstructions.
  There is clear access, within 30 feet, to at least two sides of the site.
  The work will be performed by a non-union contractor.
  The work will be done on a straight time labor rate based on an eight hour day, five days a week (Monday through Friday), forty hours a week total. Any work required to be performed on Saturdays, Sundays, holidays or on an overtime basis will be to Purchaser's account. Any costs due to delays beyond Dürr's control will be to Purchaser's account.
  All safety procedures are to be per Dürr Systems standard procedures.

2 Technical data and responsibility matrix

2.1 Technical data

Customer specification	Design (per RTO)
Inlet temperature	80 °F
Inlet static pressure	(-) 2 in. w.c. @ inlet to RL unit
Moisture content	Std
Altitude	630 ft
Specified actual max. volume	45,000 scfm
VOC loading	Not provided, customer will provide for final design engineering. Dürr assumed a value of 100 lb/hr for this budgetary proposal.
VOC type	Methanol, Petroleum Distillates (hydrotreated light), Naphtha (petroleum - hydrotreated heavy), Solvent Naphtha (petroleum – light aromatic)
Total particulate loading maximum	Not provided, customer will provide for final design engineering
Estimated operating conditions	
Process airflow and temperature	45,000 scfm at 80 °F process air inlet temp.
Natural Gas	
With zero lbs/hr VOCs @ 15,000 Btu/lb	5.32 mmBtu/hr of net fuel heat input
With 100 lbs/hr VOCs @ 15,000 Btu/lb	3.09 mmBtu/hr of net fuel heat input
With 247.29 lbs/hr VOCs @ 15,000 Btu/lb	0.00 mmBtu/hr of net fuel heat input
Compressed air	2 scfm @ 80 psig at 100 lb/hr VOCs
Electric	135 kW usage at 100 lb/hr VOCs
Design parameters	design
Number of chambers	12 individual chambers
Heat exchanger media	Structured packing (monolith block)
Heat exchanger thermal efficiency	95.36 % mass corrected
Combustion chamber operating temperature	1,550°F
Bake-out	Type, manufacturer or comment
Off-line	Included
Utilities connections	
Natural Gas (burner max capacity)	7.4 scfh @ 5 psi connection point at RL skid
Compressed air	2 scfm @ 80 psi connection point at RL skid (connected peak)
Electric	480/3/60 to connection point on RL Skid

Dürr Systems, Inc. reserves the right to make modifications as deemed necessary during final engineering.

Specifications incorporated	
Customer specifications	None provided
ECOPURE® RL chamber	Type, manufacturer or comment
Materials of construction - upper chamber	3/16" thk., A36 plate., A992 structural
Materials of construction - lower chamber	1/4" thk., A36 plate., A992 structural
External coating	Finish paint, #34 Medium Gray
Internal coating	Not required
ECOPURE® RL chamber insulation	Type, manufacturer or comment
Interior combustion chamber	6" thk. 10 lb/ft³
Media support	Corten
Burners	Type, manufacturer or comment
Manufacturer	North American or Dürr approved equal
Number of burners	One (1) per RL unit
Flame monitor	UV scanner
Air injection	Included
Gas injection	Not included
Fuel enhancement	Not included
Gas trains	Type, manufacturer or comment
Blocking valve manufacture	Maxon or equiv
Combustion blower	New York Blower, with silencer, arrangement #4, 3600 rpm
NFPA 86 standard	pre-approved
Gas train enclosure	Not included
Burner/gas train access platform	Diamond plate
Platform access	OSHA standard-caged ladder
Individual components UL & FM listed	Included
Natural gas meter	Not included
Diverter valve and drive system	Type, manufacturer or comment
Diverter valve	Heavy duty carbon steel construction
Drive motor	3 hp, 480 volt, 3 ph, 60 hertz
Drive motor VFD manufacturer	SEW Movidrive
Gear drive guards	Personnel protection

Dürr Systems, Inc. reserves the right to make modifications as deemed necessary during final engineering.

Fan	Type, manufacturer or comment
Type	Centrifugal
Quantity	One (1)
Manufacturer	New York Blower or equal
Volume	45,000 scfm, 80° F inlet temperature
Arrangement	Included
Materials of construction	Mild steel
Inlet/Outlet flex connections	Included
Inlet/Outlet flex connections materials of construction	Fabric
Fan insulation and cladding	Not included
Motor size, RPM, manufacturer	200 hp., 1800 rpm, manufacturer
Motor service factor	1.00
Fan bearing and motor mounting plate	Included
Fan bearing forced lubrication system	Not included
Fan bearing temperature monitoring	Not included
Fan vibration switch	Included
Filter House	
Unit Component Sections	Pre-Filter, Intermediate Filter, Final Filter
Differential Pressure	Magnehelic Gauges for the above sections
Exterior, Interior, Floor Liner	Galvanized Steel
Dimensions	17’6” L x 11’8” W x 11’4” H
System controls	Type, manufacturer or comment
Master control panel	NEMA 12 for dust free and temperature controlled environment.
Programmable controller (PLC)	Allen-Bradley Compact Logix
Human machine interface (HMI)	Panel View Plus 700
PLC software	RS Logix
Programming, screen development, etc.	Included
Operating modes	Type, manufacturer or comment
Automatic sequence start	Included
Automatic sequence stop	Included
Fresh air stand-by mode	Start-up capability on fresh air
Hot shutdown mode	Included
Chart recorder	Endress+Hauser
Inlet temperature	Included
Outlet temperature	Included
Combustion chamber temperature	Included
Flame safeguard control	Honeywell
High temperature limit	Honeywell
Variable Frequency Drive	Type, manufacturer or comment
VFD manufacturer	Yaskawa
VFD size/quantity	200 hp.

Dürr Systems, Inc. reserves the right to make modifications as deemed necessary during final engineering.

Control room	Type, manufacturer or comment
Manufacturer	Dürr
Control room lighting	Included
Lighting transformer	Included
Heated & air conditioned	Included
Personnel access door with removable header	Included
Power distribution panel	Included
Exhaust stack	Type, manufacturer or comment
Height	30 ft
Materials of construction	A36
Personnel protection	Not included
Insulation & cladding	Not included
Test ports	Included
Stack drain	Included
Sampling platform	Not included. Access ports from RL roof
Safety ladder	Not included
Interconnecting manifolds	Type, manufacturer or comment
Inlet/outlet manifold diameter	Varies
Inlet/outlet manifold construction	12 ga. minimum carbon steel
Inlet/outlet manifold flex connectors	Fabric
Inlet/outlet manifold velocity	3,500 fpm
Personnel protection	Not included
Insulation and cladding	Not included
Dampers	Type, manufacturer or comment
Inlet isolation damper	Not included
Outlet isolation	Not included
Fresh air intake damper	Included
Inlet/outlet manifold vacuum breaker	Not included
Miscellaneous	Type, manufacturer or comment
Area lighting on the RTO only	Not Included
Source duct work	Type, manufacturer or comment
Process ductwork	Not included
Duct supports	Not included
Fire detection and suppression systems	Not included

Dürr Systems, Inc. reserves the right to make modifications as deemed necessary during final engineering.

INSTALLATION NOTES

1. ALL FOUNDATION ENGINEERING SHALL BE BY OTHERS.
2. PAD DIMENSIONS SHOWN SHALL BE CONSIDERED AS MINIMUMS FOR EQUIPMENT ACCESS. DURR SYSTEMS, C.T.S. RECOMMENDS THAT ALL EXPOSED FOUNDATION EDGES BE BEVELED TO PREVENT CHIPPING. TOP OF ACCESS PADS SAME ELEVATION AS RTO PAD.
3. FOUNDATION CONCRETE ELEVATION TOLERANCE SHALL BE ±1/8".
4. FOUNDATIONS WILL BE CHECKED PRIOR TO EQUIPMENT PLACEMENT. ANY DISCREPANCIES IN FOUNDATION ELEVATIONS SHALL BE CORRECTED BY FOUNDATION INSTALLER BEFORE EQUIPMENT PLACEMENT WILL COMMENCE.
5. FOUNDATIONS SHALL BE FREE FROM DIRT, GREASE AND OTHER SUBSTANCES, PRIOR TO GROUT PLACEMENT.
6. ANCHOR BOLT DESIGN, INCLUDING MATERIAL SELECTION AND EMBEDMENT LENGTH, SHALL BE PERFORMED BY THE FOUNDATION DESIGN ENGINEER.
7. DURR SYSTEMS, C.T.S. RECOMMENDS THAT THE RTO INSTALLER USE "CHEMICAL SET" ANCHOR BOLTS, TO BE INSTALLED AT THE TIME OF SKID PLACEMENT; AND SEPARATE "CHEMICAL SET" ANCHOR BOLTS BE USED FOR THE RTO STACK AND FAN/MOTOR (IF APPLICABLE).
8. DRILLED– IN– PLACE ANCHOR BOLTS AND ASSOCIATED HARDWARE SHALL BE FURNISHED AND INSTALLED BY THE RTO INSTALLATION CONTRACTOR.
9. RTO INSTALLATION CONTRACTOR SHALL SHIM AND GROUT RTO SKID AND STACK BASE PLATES, AND FAN AND MOTOR SUPPORTS (IF APPLICABLE). DURR SYSTEMS, C.T.S. RECOMMENDS A 1" ALLOWANCE FOR SHIMS AND GROUT. MATERIAL RECOMMENDATIONS:
   - 9.1 SKID AND STACK SHIMS: _____ CARBON STEEL SHIM STOCK
   - 9.2 FAN AND MOTOR SHIMS (IF REQUIRED): _____ 304ss SHIM STOCK
   - 9.3 GROUT: _____ MASTERBUILDERS "MASTERFLOW" # 928 OR EQUAL (CONSULT DURR SYSTEMS, C.T.S. IF LESS THAN 1" OF GROUT IS REQUIRED)

   FOR PROPER INSTALLATION, FOLLOW GROUT MANUFACTURER'S INSTRUCTIONS.
10. GROUT SHALL BE TRIMMED TO BOTTOM OF BASEPLATES AT A 45 DEGREE ANGLE – NOT TO TOP OF BASEPLATES!
11. CONSULT DURR SYSTEMS, C.T.S. FOR SPECIAL GROUTING APPLICATIONS:
    - 11.1 AREAS OF KNOWN CHEMICAL ATTACK
    - 11.2 APPLICATION OF GROUT IN AMBIENT TEMPERATURES OTHER THAN RECOMMENDED BY GROUT MANUFACTURER
    - 11.3 EPOXY GROUT APPLICATION/USAGE.

LEADING IN PRODUCTION EFFICIENCY

NEXT GENERATION RTO TECHNOLOGY
Ecopure RL - SINGLE VALVE THERMAL OXIDIZER

Advanced modular RTO system

What makes the **Ecopure** RL different?

The **Ecopure** RL is the most advanced regenerative thermal oxidizer (RTO) available. With a compact, rugged design, it offers the highest destruction efficiency and heat recovery of any RTO on the market.

This state-of-the-art design features a single rotary diverter valve and twelve heat recovery chambers enclosed in a single tower that arrives onsite in a pre-piped, pre-wired package that maximizes quality and minimizes field assembly.

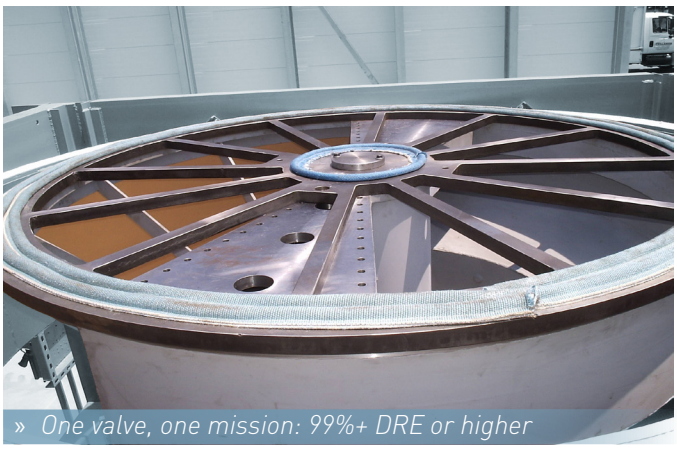
» *The **Ecopure** RL provides a modular, high performance, and cost efficient RTO system that fits in even the smallest footprints*

99%+ VOC removal is standard

The **Ecopure** RL provides the highest standard volatile organic compound (VOC) removal of any RTO available at 99%+. All RTOs use a combination of time, high temperature, and turbulence to destroy pollutants. Only the **Ecopure** RL does so with minimum moving parts.

The heart of the **Ecopure** RL is its simplicity. A single outlet diverter valve replaces all butterfly or poppet valves used in a conventional RTO.

This heavy-duty valve features machined, metal seats with a unique air seal that provides a 99%+ destruction of VOCs and HAPs. This ensures your plant will be compliant now and long into the future.



» *One valve, one mission: 99%+ DRE or higher*

*Scan to see a video of how the **Ecopure** RL operates*

COST EFFECTIVE ENGINEERING

Advantages that set the Ecopure RL apart

Performance, performance, performance. The **Ecopure** RL simply outperforms the competition.

- Standard 99%+ destruction efficiency - guaranteed
- Up to 95% thermal energy recovery
- Low pressure drop
- Particulate and condensable tolerant

Durable, low-maintenance design

If uptime is crucial and system downtime is unacceptable, the **Ecopure** RL is your only choice.

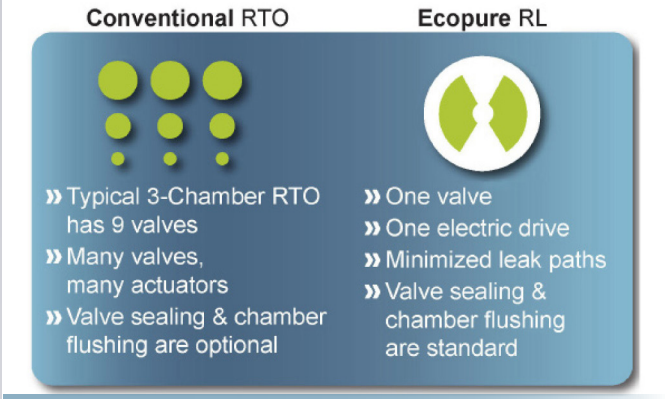
- Skid mounted design (pre-piped, pre-wired) makes for more cost effective install
- All drive components external to unit
- All fuel train components at grade
- Replaces multiple dampers used in conventional RTO
- Fewer moving parts, greater reliability
- Electric valve drive system replaces hydraulic and pneumatic drives found in typical RTOs
- Online bake-out option allows for removal of particulates, aerosols, and condesables without process interruption.

Diversity in industry

Dürr is your source for proven cost effective air emissions compliance solutions, with over 45 years of experience and 4,000 pollution control systems operating in a broad range of industries.

The **Ecopure** RL is available in pre-engineered sizes up to 100,000 SCFM+ per unit. The system is highly versatile and applicable in most industries and processes, including:

- Automotive & industrial painting
- Chemical & petrochemical
- Coating & printing
- Semiconductor
- Pharmaceutical
- Food processing & odor control
- Wood products
- Carbon fiber
- Biofuels and many more



» *Less valves, less maintenance, greater reliability*

» *Three 60,000 scfm **Ecopure** RL systems used for odor control at a pet food manufacturing facility in Kansas*

» *50,000 scfm **Ecopure** RL installed at a carbon fiber manufacturer in Washington.*

Subject to change. The information in this brochure contains only general descriptions or performance characteristics which may vary in actual cases. The requested performance parameters shall be binding only if they are explicitly agreed within the sales contract. © Dürr Systems, Inc.

General Terms and Conditions of Sale

Seller shall provide only the materials, equipment, and where applicable, the labor and services described in this Proposal in accordance with, and subject to, the following terms and conditions which are part of the Contract between Seller and Buyer and which are accepted by Buyer if Buyer either issues a purchase order covering the Work or otherwise authorizes the Seller to perform the Work.

No other material or equipment of any nature is included in the price stated in the Proposal. Buyer acknowledges it has inspected, examined, and studied all plans, specifications, prints, drawings, and material lists furnished by Seller and that it has approved the same, including, without limitation of the foregoing, Buyer's Scope of Work in connection therewith. For the purpose hereof, except as otherwise provided in this Proposal, Buyer's Scope of Work shall mean all site preparation, utility connections, etc., required for the installation of the equipment.

1. **Term of Proposal**. Unless otherwise provided, this Proposal is subject to acceptance by Buyer within thirty (30) days from the Proposal date.

2. **Delivery**. Unless otherwise provided, all shipments of materials and equipment shall be made by Seller Ex-works Origin. Title and risk of damage to or loss of goods shall pass to Buyer upon delivery of goods to carrier. No claim will be allowed unless made by Buyer within 7 days from receipt of shipment. This Contract is based on the current freight rates and the price is subject to adjustment in the event that a change in such rates affects Seller's cost of performance hereunder. Prices quoted are for furnishing and shipping complete, or in accordance with the delivery schedule specified, the quality or quantities listed for each item. Should shipping releases or schedules be changed for any reason beyond Seller's control, Seller reserves the right to invoice according to work performed by Seller through the date of any such change. If Buyer declines or is unable to take delivery at the time(s) specified in the Proposal or Contract, Seller will have the equipment stored for Buyer at Buyer's risk and account, and the materials shall be considered "delivered." Buyer shall pay storage, handling and re-handling charges and continue to make payments according to the payment terms contained herein.

3. **Installation**. If installation work is a part of this Contract, the equipment and/or machinery shall be assemble, erected and installed under the personal direction of an employee or agent of Seller. Buyer shall furnish sufficient electricity, water, compressed air, light, heat, sanitary facilities, and fire protection as well as adequate all-weather storage space, ingress and egress to the job site and other items that may be listed under Buyer's responsibilities. The site is to be prepared for installation personnel to work in a normal fashion with no extra equipment or procedures required due to construction or production interferences. Unless otherwise stated, installation shall be performed only during Seller's normal working hours and any overtime work required for any reason shall be requested by and paid for by Buyer.

4. **Site Access**. Unless otherwise provided, or waived in writing by Seller, the following will be available to Seller throughout the duration of the Work at no cost to Seller: A) A safety buffer zone shall be established nominally fifty (50) feet all around the base of Seller's work area, which will be maintained free and clear of all work, contractors, equipment and personnel; B) An adequate construction staging, lay down and material storage area for Seller's exclusive use shall be available adjacent to the safety buffer area. This area and the safety buffer shall be graded, leveled, well drained, and even with the top of the foundation and be suitable for delivery vehicles and Seller's equipment in all weather conditions; C) All weather access roads shall be made available and maintained by Buyer from a main highway and from the railroad sidings (if applicable) to Seller's area and the location of construction; and Seller's rail siding, (if applicable), shall be available to Seller within 300 feet, by the normal routing, of Seller's area.

5. **Licenses, Permits**. All building, erection or other licenses or permits necessary or related to the work, shall be secured and paid for by the Buyer.

6. **Changes and Differing Conditions**. A) If Buyer requests changes, or changes in site conditions or installation requirements occur subsequent to issuance of the Purchase Order, the parties shall renegotiate the price to reflect all expenses caused by the changes. B) Buyer, by written order accepted by Seller, may make reasonable changes in the scope of work subject to equitable adjustments in the Contract price and schedule, including an allowance for increased overhead and profit. Seller is not obligated to incur any expense or do any work in excess of that reasonably anticipated unless Buyer issues a written order for such expense and work with mutually acceptable terms and conditions. C) Seller reserves the right to make changes, subject to Buyer's approval, in design or material, which in Seller's judgment would improve the equipment and/or its operation. D) If Seller is installing equipment and any site conditions or installation requirements at the time of erection differ materially from those evident at the time of Seller's pre-bid site visit, Buyer's representations, and conditions ordinary to similar projects, then any additional costs caused by the differing site conditions or installation requirements shall be subject to equitable adjustment to the Contract price and schedule. E) If Seller's activities or operations at the site are interrupted by any party other than Seller, an equitable adjustment shall be made to the Contract price and schedule.

7. **Shipping, Delays, Suspension, Payment Acceleration**. All shipping dates are approximate, based on prompt receipt by Seller of all necessary information and are subject to change by reason of conditions beyond Seller's reasonable control as stated in Article 24. If a delay in shipment or installation is caused by Buyer or by any other cause beyond Seller's reasonable control, the portion of the Contract price already performed by Seller shall become due and payable within 30 days of shipment, or if not shipped, 30 days from the date the equipment is ready for shipment. If Buyer requires Seller to delay engineering, fabrication, shipment, installation, or start-up of the equipment and/or machinery under this Contract, Seller shall be entitled to full reimbursement for all costs incurred as a result of such delay. If Buyer suspends work on this Contract, Buyer shall reimburse Seller for all costs incurred by Seller as a result of such suspension. If the suspension exceeds 90 days, Seller shall also have the right to cancel the unfinished portion of the Contract without liability to Buyer of any kind and Seller will be paid according to Article 16.

8. **Other Contractors.** Seller has no duty or authority to direct, supervise or oversee any contractors of Buyer or to provide the means, methods or sequence of their work or to stop their work. Seller's services and/or presence at a site shall not relieve others of their responsibility to Buyer or to others. Seller shall not be liable for the failure of Buyer's contractors or others to fulfill their responsibilities, and Buyer agrees to indemnify, hold harmless and defend Seller against all claims arising out of such failures.

9. **Safety Devices**. Seller will supply such safety devices or fire protection equipment as is specified in the Proposal. If Buyer desires or requires through local, state, or insurance underwriter's specifications or regulations, other additional safety devices or equipment, Seller may elect to furnish same at Buyer's cost.

10. **OSHA – Federal, State & Local.** Seller will comply with the Federal OSHA requirements in effect as of the date of the Proposal relative to the Work. Seller's sole responsibility is limited to modification or replacement of the equipment cited as violating such standards. OSHA requirements with respect to noise are specifically excluded. Where state, local or Buyer's health and safety requirements differ from the Federal OSHA requirements, modifications or changes in design to meet such requirements will be incorporated at Buyer's request. Additional costs arising from such requests and from erection procedures required by state, local or Buyer's health and safety regulations which deviate from Federal OSHA requirements are for Buyer's account.

11. **Material/Workmanship Warranty (Applicable to Equipment, Systems, and Spare Parts Orders).** Seller warrants that all equipment it manufactures and furnishes and work provided will be free from defects in materials and workmanship for a period of twelve (12) months from the date Buyer is able to begin deriving commercial benefit from the work or eighteen (18) months from the date the first item is shipped, whichever occurs earlier. For equipment whose operation involves burners, commercial benefit is defined as the date of first burner ignition of the equipment. Seller's sole obligation is to repair or replace, at Seller's option, any part or component which, after Seller's inspection, proves to be defective, provided that Seller shall not be obligated for any removal, shipping or reinstallation costs. Seller will make repaired or replacement components available to Buyer in Seller's standard packaging, Ex-works Seller's shipping point. The warranty does not apply to consumable, replaceable parts or components normally subject to wear and replacement. Seller's obligations in this Article are subject to the following conditions: A) Receipt from Buyer of immediate written notice describing the defect in detail. B) Buyer shall not have attempted to correct the defect without Seller's approval. C) Buyer shall have installed (if applicable), operated and maintained the equipment strictly in accordance with Seller's operating and maintenance instructions, including, but not limited to, Seller's design basis or other design criteria stated in Seller's Proposal. D) The defect has been caused solely by faulty materials or workmanship for which Seller is responsible, and is not due to such things as erosion, corrosion, or deterioration resulting from the manner in which the equipment is operated, accident (including damage during shipment), neglect, misuse or abuse, or exposure to conditions beyond the environmental power or operating constraints specified by Seller.

To the extent that the materials and equipment furnished consist of products manufactured by other parties, such manufacturer's warranty is hereby assigned to Buyer, and Seller's responsibility with respect to any such products shall not extend beyond the manufacturer's warranty. It is understood that Seller's warranty with respect to such products is limited to repair or replacement at Seller's option and does not include labor, repair or replacement costs, or travel unless otherwise provided.

12. **Services Warranty (Applicable to Consulting, Design, Engineering, Inspection and Planning Orders).** A). Seller warrants that the services shall be performed in a competent and non-negligent manner. Within a period of twelve (12) months from completion of such services, Seller shall; at its cost, correctly re-perform any non-conforming services or, if such services cannot be re-performed, refund the amount paid for such non-conforming services. B). Seller warrants that any engineering and/or design work that it performs hereunder shall be performed in accordance with generally accepted trade or industry practice. Seller's liability for such warranty shall be fully satisfied by revision and resubmission of all calculations and drawings incorrectly completed as a consequence of breach of this warranty. C). Buyer expressly acknowledges and agrees that the foregoing warranties in this Article 12 are offered by Seller expressly contingent upon Buyer's strict compliance with Article 18, and further that any failure of Buyer to comply with the terms thereof shall be deemed as a breach of Buyer's obligations hereunder.

13. **Patent Warranty.** Seller shall defend, at its expense, any suit or proceeding brought against Buyer based on any claim that the equipment covered herein, except for equipment or material manufactured or designed to Buyer's specifications, infringes any U.S. patent issued as of the date of this Proposal, and pay any court imposed damages and costs finally awarded against Buyer, but not to exceed the amount previously paid to Seller by Buyer hereunder provided: A) Seller is promptly notified by Buyer in writing of such claim; and, B) Seller is given full authority, information, and assistance by Buyer which Seller deems necessary for the conduct of such defense. In order to avoid such claims and/or minimize potential liability, Seller shall have the right and option at any time to: A) procure for the Buyer the right to use the equipment; or B) modify the equipment so that it no longer infringes; or C) replace the equipment with non-infringing equipment.

14. **Performance Guarantee**. Seller's sole guarantees are those contained in its Proposal to Buyer. These guarantees are contingent upon the correctness and accuracy of the information provided by Buyer and are based upon the operating conditions specified in Seller's Proposal and operation and maintenance by properly trained personnel. These guarantees will be deemed satisfied by successful completion of performance tests in accordance with applicable standard procedures as specified in the proposal and in effect on the date of this proposal. Performance tests shall be conducted by the Buyer, (unless otherwise specified in Seller's Proposal), and witnessed by Seller, at its option, within 90 days of initial operation of the equipment. If the tests are not conducted within 90 days of the initial operation or within 6 months of shipment, whichever is earlier, and through no fault of Seller, the equipment shall be deemed accepted by the Buyer and in compliance with all contractual requirements. Seller makes no warranty whatsoever as to the inclusion of the equipment supplied by Seller into Buyer's manufacturing process, Seller's warranty being limited solely to the performance of its equipment in accordance with the applicable provisions in Seller's proposal. If the equipment fails to meet the Contract performance guarantees, Seller will supply at its sole option, repaired or replacement parts pursuant to the delivery terms of the Proposal subject to the limitations stated in Article 27.

15. **IMPLIED WARRANTIES/GUARANTEES DISCLAIMER. THE WARRANTIES AND GUARANTEES FURNISHED BY SELLER, AS EXPRESSLY INCLUDED HEREIN, CONSTITUTE THE SELLER'S SOLE OBLIGATION HEREUNDER AND ARE IN LIEU OF ANY OTHER WARRANTIES OR GUARANTEES, EXPRESS OR IMPLIED, INCLUDING WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE.**

16. **Cancellations**. If Buyer cancels for any reason at any time after Seller has received a purchase order (or other authorization) for any equipment, parts, or services or any combination thereof, Buyer shall pay to Seller within 30 days of such cancellation, all contract costs and other expenses incurred by Seller prior to receipt of the request for cancellation (including, but not limited to, engineering expenses, and overhead, costs of expended materials, direct labor with factory burden, and all commitments to Seller's suppliers, subcontractors and others), plus cancellation charges of 20% of the Contract price to cover general and administrative expenses plus 10% of the Contract price to cover profit lost by reason of cancellation. If Buyer materially breaches any obligation, then Seller may cancel the unfinished portion of the Contract without liability of any kind to Buyer. In any such case the terms of this Article 16 shall apply.

17. **Bonds.** If Seller agrees in writing to furnish any bond or bonds on account of the execution or fulfillment of this Contract, then the cost will be added to the quoted price. The penal sum of any bond or bonds furnished by the Seller in connection with this Contract shall be automatically reduced to 5% of the initial Contract value upon the date Buyer is able to begin deriving benefit from the work or 3 months after the date Seller notifies Buyer of its readiness to ship equipment, whichever occurs earlier. Buyer agrees to execute any acknowledgement or furnish documents required to effect this reduction.

18. **Credit and Payment**. A) Unless otherwise agreed, payment shall be as outlined in the Proposal and payments shall be made in current funds of the U.S. at par within 30 days of presentation of an invoice.

General Terms and Conditions of Sale

Payments not received by the due date shall be subject to a monthly interest charge at the rate of 2% per month or the maximum amount allowed by law, whichever is less, due and payable until the payment is received. B) Buyer shall also pay all collection costs of Seller on any delinquent amounts including, but not limited to, court costs and attorney fees. Seller will assess Buyer's financial condition and Seller shall have the absolute right to (i) limit the amount of credit that Seller may extend to Buyer for the purpose of goods hereunder, and delay manufacture or shipment of Buyer's orders based upon those limitations; (ii) require full or partial payment in advance; (iii) ship goods to Buyer C.O.D., require payment by irrevocable confirmed letter of credit, or require payment to be secured by letters of credit; (iv) require written guarantees of payment satisfactory to Seller; or (v) cancel or refuse to accept or fill any order from Buyer then outstanding or thereafter placed, all on terms satisfactory to Seller, in its sole and absolute discretion.

18.1 **Default in Payment**. A) If any payment due Seller is more than 30 days past due, Seller shall have the right at its sole option to accelerate the payment of all outstanding amounts, including, but not limited to, amounts previously retained pursuant to the Contract, by notifying Buyer in writing that all outstanding amounts are immediately due and presenting Buyer with an invoice. Seller shall also have the right in such event to discontinue all work on the project without incurring any liability to Buyer for such action; B) If the total aggregate amount of delinquent payments exceeds 10% of the total Contract price, Buyer shall provide, at Seller's request, additional collateral, including, but not limited to, irrevocable letters of credit, sufficient to secure payment of all Contract amounts; C) The foregoing remedies of Seller are in addition to all other remedies Seller may have at law or in equity, including, but not limited to, the right to obtain liens on Buyer's assets through legal or equitable proceedings.

18.2 **Security Agreements**. A) Buyer hereby grants to Seller a security interest in the equipment or materials sold hereunder to secure the purchase price of same. Buyer shall execute any financing or other statements or filings which in Seller's sole judgment are necessary or appropriate to evidence or perfect such security interest, which shall thereafter be filed by Buyer with the appropriate recording officer. This Contract shall constitute the security agreement between the parties and is intended to and shall afford the Seller all rights of a secured party under Article 9 of the Uniform Commercial Code; B) Until Buyer has paid the full amount due and owing for any equipment or materials purchased hereunder, Buyer shall be prohibited from transferring such equipment or materials to any creditor of Buyer other than Seller, unless Seller provides its prior written consent to such transfer, such consent not to be unreasonably withheld; C) If Buyer becomes insolvent, files for Bankruptcy, or goes into receivership or liquidation, Buyer agrees to use its best efforts and to provide all assistance requested by Seller in order to secure Seller's position as a preferred creditor with respect to all amounts due to Seller.

18.3 **Payment of Retained Amounts**. A) If this Contract permits Buyer to withhold final payment, and acceptance is not based upon performance tests, such payments shall be due and payable within 30 days after the equipment is ready for operation; B) If such deferred payment is contingent upon tests and such tests are delayed through no fault of Seller for more than 30 days after the equipment is first ready for operation, final payment shall be due and payable upon expiration of the 30 day period; C) If a retention value is required and agreed, it shall accrue interest at the rate of 1% per month on the outstanding balance until exchanged for a letter of credit or paid to Seller. Seller retains the right to provide Buyer with a letter of credit in lieu of retention at any time during the performance of the contract.

18.4 **International Project Payment Requirements**. If this Contract involves shipment of Seller's goods outside the U.S.A. the following payment terms apply, unless otherwise provided in Seller's Proposal: 1) Down Payment - EFT: The initial down payment will be made by EFT within 10 days after Seller issues an invoice and formal order acknowledgement letter to Buyer. 2) Other Payments- Commercial Letter of Credit: Balance of Contract price will be paid by Irrevocable Letter of Credit (L/C) issued within in USD by a Prime Bank within 30 days after Seller's issuance of its formal acknowledgement letter and covering the following payments:

a. Shipping Payment: L/C will allow a payment at sight against Seller's shipping documents (invoice, packing list and bill of lading/airway bill) presented to Seller's bank. Unless otherwise specified in Seller's proposal, the combined value of this payment and the initial down payment will equal 95% of the Contract price.
b. Final Retention Payment: (if applicable) will be due upon the earlier of, either 1) acceptance certificate, or 2) 180 days after date of bill of lading corresponding to last major shipment.

L/C General Requirements: A) The L/C will be issued on terms acceptable to Seller (generally described in this Article 18.4), and advised and confirmed by Seller's Bank. B) L/C will allow not less than 21 days after issuance of 3rd party transport documents for presentation of Seller's documents. C) L/C will expire in USA no earlier than 30 days after Seller's last shipment under the contract. D) L/C will allow partial and transshipments by ocean or air. E) L/C will be freely negotiable in USA with reimbursement instructions and authorizing reimbursement via SWIFT/TELEX. F) All banking charges for Buyer's account.

19. **Escalation**. Buyer will adjust the Contract price and pay Seller for: A) costs Seller has or may incur that were not anticipated by Seller as of the date of the initial Proposal or, B) the Contract exceeds the time frame contemplated by the parties.

20. **Taxes and Duties.** Unless otherwise provided, any tax or import duty imposed by any federal, state, local or municipal Authority arising out of the sale, manufacture or installation of the equipment or performance covered by this Contract, is not included in the price as quoted in the Proposal, and Buyer is responsible for any such amount(s).

21. **Proprietary & Confidential Materials**. All information supplied by Seller as to design, manufacture, erection, operation and maintenance of the equipment, including all drawings, patterns, specifications and information in Seller's Proposal or Contract, shall be the proprietary and confidential property of Seller and shall be returned to Seller at its request. Buyer shall have no rights in Seller's proprietary and confidential property and shall not disclose such to others or allow others to use such property, except as required for the Buyer to obtain service, maintenance, and installation for the equipment purchased from the Seller. Specifically, Buyer agrees that no drawings, specifications or information included in Seller's Proposal or Contract shall be used by Buyer for competitive bidding or similar purposes without Seller's consent and Buyer shall not reproduce or build assemblies or process systems per Seller's design drawings without explicit approval of Seller; B) Buyer shall hold in confidence and shall not disclose, divulge or publish to any person, or use or copy any trade secret, process, record, plan, projection, information pertaining to customers or prospective customers, financial information, marketing strategies, or any other confidential or proprietary information of Seller (including the terms and conditions of this Contract or any other agreement between Buyer or Seller) acquired or in connection herewith, or disclosed or transmitted by Seller or any of its agents, employees, or affiliates, except as authorized in writing by Seller, and Buyer shall keep, and shall require its officers, directors, employees, and agents to keep such information confidential; C) This clause shall survive the termination of this Contract and be in effect as long as Buyer has possession of any of Seller's proprietary or confidential information.

22. **Hazardous Materials**. If the Buyer's facilities contain hazardous materials, including asbestos bearing materials and any such materials are encountered, Seller shall have no obligation to remove or remediate them in the absence of a separate agreement which includes separate consideration to Seller for such work. If Seller or any of its subcontractors is required to perform work within or immediately adjacent to any facilities that are determined to contain hazardous material and/or asbestos, and the said work must be interrupted to allow for the remediation or removal of such materials by others, Seller shall be entitled to any and all costs and other expenses associated with such interruption in work. Buyer shall fully defend, hold harmless and indemnify Seller and its agents from and against any claim arising out of exposure to such hazardous and/or asbestos bearing materials.

23. **Health and Safety**. Seller shall not be responsible for health or safety programs or precautions related to Buyer's activities or operations, Buyer's other contractors, the work of any other person or entity, or Buyer's site conditions. Seller shall not be responsible for inspecting, observing, reporting or correcting health and safety conditions or deficiencies of Buyer or others at Buyer's site, and Buyer agrees to indemnify, hold harmless and defend Seller against any claims arising out of such conditions or deficiencies. So as not to discourage Seller from voluntarily addressing health or safety issues while at Buyer's site, in the event Seller does not address such issues by making observations, reports, suggestions or otherwise, it is understood and agreed that Seller shall nevertheless have no liability or responsibility arising on account thereof.

24. **Delays and Damages – Force Majeure**. A) In the event of delays in the performance of the obligations hereunder or damages due to conditions beyond Seller's reasonable control, including, but not limited to acts of God, acts of Buyer, or Buyer's customer or other contractors employed by Buyer, acts of civil or military authority, governmental restrictions, prohibitions and regulations, priorities, fire, storms, strikes, floods, epidemics, quarantine restrictions, war, riot, delays in transportation, car shortages, or Buyer's inability to obtain necessary labor, materials, or manufacturing facilities, the Contract dates shall be extended by an equitable period of time and Seller shall be entitled to an equitable adjustment in the Contract price. B) Acceptance of the equipment by Buyer shall constitute a waiver of all claims for damages. C) Seller's shipping dates are approximate. Seller's performance is predicated on certain performance of Buyer and Seller is not responsible for loss or damage arising from delays caused by Buyer's inability to act, failure to perform, or failure to provide complete and/or accurate information. D) This Section shall in no event be construed to relieve Buyer from the obligation to pay for goods shipped by Seller.

25. **Disclaimer of Consequential Damages.** Seller, it's subsidiaries, affiliates, agents, or employees shall not be liable to Buyer for incidental, indirect, special, liquidated or consequential damages, including, but not limited to, loss of profits or revenue, loss of use of equipment, costs of replacement or substitute goods or product, costs of capital, additional expenses incurred in the use of equipment or facilities, or claims of third parties. This disclaimer shall apply to consequential damages based upon any cause of action whatsoever asserted against Seller, including one arising out of any breach of warranty, express or implied; guarantee; products liability; negligence; tort; or any other theory of liability.

26. **Indemnification by Buyer**. Buyer shall indemnify Seller for, and hold Seller harmless from, all costs and expenses incurred by Seller, including, without limitation, costs of investigation, attorney's fees, and amounts paid in settlement or satisfaction of claims, proceedings or judgments in connection with all claims and proceedings against Seller based upon claimed defects in design in any equipment or material manufactured for Buyer by Seller to Buyer's specifications or design.

27. **Limitation of Liability.** Seller's liability for any and all claims, including property damage and personal injury claims, allegedly resulting from breach of contract, tort, or any other theory of liability shall not exceed either A) the amount of the initial purchase price paid to Seller by Buyer in contracts up to one million USD in value, or B) 25% of the total contract price in contracts greater than one million but less than fifty million USD in value. Seller's liability for property damage and personal injury is limited to the amount indicated on Seller's insurance certificate issued by Seller for this contract.

28. **Buyer's Negligence and Insurance**. Seller shall not be responsible for losses or damages arising out of the negligence of the Buyer, its employees, agents or architects or those of third parties for whom Seller is not responsible, or losses for which the Buyer has agreed to provide insurance. If both Seller and Buyer are negligent and the negligence of both is the proximate cause of the accident, then each party will be responsible for its portion of the liability or damages (excluding consequential or indirect damages which are disclaimed by Seller) resulting therefrom equal to such party's comparative share of the total negligence.

29. **Severability.** Should any part of this Contract be declared invalid or unenforceable, such decision shall not affect the validity of any remaining portion, which remaining portion shall remain in full force and effect, and Seller shall have the right to replace the part declared invalid or unenforceable with a provision which serves as much as validly possible the same commercial purpose as the part determined to be invalid or unenforceable.

30. **Assignment/Subcontracts**. This Contract shall be binding upon and inure to the benefit of the parties, their successors, and assigns provided that Buyer may not assign the Contract without prior written consent of Seller. Seller may subcontract any portion of the work.

31. **Disputes.** If a dispute arises hereunder, the parties will confer and attempt to amicably resolve the dispute. If after good faith negotiation, the parties cannot reach agreement, then the matter will be finally resolved in any court having jurisdiction and venue located within the County of Oakland, State of Michigan or the U.S. District Court for the Eastern District of Michigan.

32. **Entire Agreement, Contract Interpretation, Governing Law**. All communications, written and verbal, between the parties with reference to the subject of this Contract prior to the date of acceptance are merged herein, and this Proposal, when duly accepted and approved, shall constitute the sole and entire agreement and Contract between the parties. No change in or modifications of said Contract shall be binding upon the parties or either of them, unless the changes or modifications shall be duly accepted in writing by both parties. Unless Seller expressly agrees to the contrary in writing, these General Terms and Conditions of Sale (including statements made in the Proposal) shall govern any conflict with any in Buyer's documents. Any contract resulting from this Proposal shall be construed, governed and enforced in accordance with the laws of the State of Michigan, exclusive of the choice of law rules thereof. The U.N. Convention on Contracts for the International Sale of Goods shall not apply to this Contract.

1.0 DÜRR SYSTEMS, INC. FIELD SERVICE RATES

1.1 Term of Proposal: Unless otherwise provided, this Proposal is subject to acceptance by Buyer within thirty (30) days from the Proposal date.

1.2 Domestic:

a. From the hour the Seller's representative leaves the basing point and including the hour of Seller's representative's return to its basing point, payment shall be made by Buyer to Seller at the rates listed below.

b. A workday is defined as any day, Monday through Friday, whether actual work is performed or not. Also, any travel time to or from the base point is considered a workday and payment shall made in accordance with the applicable workday rates defined herein.

		US, Canada Mexico Rates	International Rates
Field Labor	Straight Time	$110/hr.	$137.50/hr.
	Overtime	$135/hr.	$168.75/hr.
	Sun/Holiday	$165/hr.	$206.25/hr.
	Travel Time	$110/hr.	$112.50/hr.
Field Service	Straight Time	$120/hr.	$150.00/hr.
	Overtime	$150/hr.	$187.50/hr.
	Sun/Holiday	$180/hr.	$225.00/hr.
	Travel Time	$120/hr.	$125.00/hr.
Engineer	Straight Time	$145/hr.	$168.75/hr.
	Overtime	$175/hr.	$218.75/hr.
	Sun/Holiday	$210/hr.	$262.50/hr.
	Travel Time	$145/hr.	$168.75/hr.
Sr. Engineer / Project Manager	Straight Time	$160/hr.	$187.50/hr.
	Overtime	$195/hr.	$243.75/hr.
	Sun/Holiday	$225/hr.	$281.25/hr.
	Travel Time	$160/hr.	$187.50/hr.
Modem Support		$150/hr.**	$150/hr.**

** Billed in ¼ hour segments, with 1 hour minimum, unused portion credited against future support.

The minimum workday charge will be based on a full eight (8) hour day.

Mileage charges for the usage of ***personal vehicles will be billed at $.67 per mile*** from the representative's basing point.

2.0 EXPENSES

2.1 Transportation

Travel by air will be Coach Class for US, Canada and Mexico, Business Class for International. Round trip transportation to and from the job site location will be billed at cost plus a ten percent (10%) processing fee.

2.2 Room, Board and Local Transportation

Meals, living expenses, such as lodging, laundry, etc., and local car/equipment rental will be billed at cost plus a ten (10) % percent processing fee.

2.3 Subcontractor Charges

Charges from Seller's subcontractors will be billed at cost plus a fifteen percent (15%) processing and administration fee.

COMPANY CONFIDENTIAL - TRADE SECRET AND PROPRIETARY INFORMATION OF DÜRR SYSTEMS, INC.

3.0 MISCELLANEOUS

3.1 Rate Adjustments

Unless otherwise agreed, rates will be paid as set forth in this Proposal and may be adjusted to those in effect at the time the service is performed. **The listed rates are available only for calculating additional labor cost. These rates are not to be used for calculating deducts of labor cost without the expressed written consent of Dürr Systems, Inc.**

3.2 Lay-Over Expense

Where circumstances require that a service representative be held over on weekends during which no work is performed, charges will be made for eight (8) hours per day at the straight time rate and living expenses will be billed per Section 2.

3.3 Cancellation

In the event the Buyer should cancel a service requirement less than five (5) business days in advance of a previously agreed upon start date, a cancellation fee of one (1) day's service will be charged per Section 1 above.

3.4 Reporting/Engineering Services Charges

Standard reports may be issued for all field service visits, whether completed on-site or after departure from site. Appropriate report writing time will be invoiced accordingly.

Unless otherwise provided, all engineering services or other work performed by the Seller at its basing point or its offices, including report research and/or writing will be billed at $135 or $150 per hour per Section 1.1 above.

Section II: INTRODUCTION

NIBCO, Inc., Blytheville facility manufactures cast iron valves using grey and ductile iron produced from scrap iron and steel. Operations are housed in several buildings. The two main buildings are designated as Building 27 and Building 28. The operations at this facility include foundry, machining and assembly operations, painting and surface coating, storage, and shipping.

Summary of Permit Activity

This permit adds a new burn-off oven to replace NIBCO's old burn off oven, SN-21. The new oven is rated at 3.0 BTU/hr and will be given the same source number.

Process Description

Foundry operations start with the production of cores and molds. The cores and molds are an integral part of the valve manufacturing business in that they provide the basic framework upon which the valve is manufactured. Cores are the portions of foundry molds that shape the interior of a hollow casting. The cores are made from new silica sand using resins and binder materials, among which are phenolic resins, polymeric isocyanate, catalysts, and other resins to solidify sand into cores.

There are several types of binder catalyst combinations. NIBCO operates five core machines which use iso-cure (phenolic urethane cold box) system. Four of the core machines are exhausted through a scrubber, SN-29. This permit covers the conversion of the fifth core machine, Sinto Core Machine, from an ester-cured phenolic cold box to a phenolic urethane cold box resin based system. In addition to the chemical change, a scrubber will be added to control emissions.

A mold is a frame inside which the valve is cast, or a cavity in which the valve takes its form. Most molds are made using the green sand process. Green sand is made from combining silica sand with a premix containing natural clay, sea coal, and water. Some molds are made using a no-bake process. The cores are placed inside the molds, sometimes with the aid of chaplets that help to prevent deformation of the casting depending on the size of the valve. Some of the castings which are manufactured do not facilitate the use of cores.

The next part of the process can be referred to as the melting process. This involves taking scrap steel, pig iron, and several alloying materials, such as ferric sulfate and ferrosilicon magnesium, and melting them in one of the four electric coreless induction furnaces. The scrap steel must be preheated to eliminate any moisture prior to being placed into the furnace. The molten metal (grey iron) is poured into the preheated ladles, transferred via a monorail system controlled by foundry personnel, and then poured into the molds. To smooth operations, molten metal can be held in the 20 ton capacity BBC holding furnace. Approximately two thirds of gray iron is converted into ductile iron (inoculated) to meet customers' specifications on ready products.

Inoculation, also called magnesium treatment, is conducted by introducing certain allowing elements (primarily magnesium) into the molten iron. Other (non-ductile) inoculants may be introduced into the furnace or ladles for metal chemistry purposes.

Casting pouring, cooling, and shakeout operations are conducted at one of three pouring lines. Once the poured molds are cooled, shakeout operations remove the core and mold sands from the cast valve. The used sand from both the molds and the cores is screened and recycled through a conveyor system where new additives are added to produce green sand for new moldings. Gates and runners are the solidified paths created during the pouring process. They are removed from the ready castings and returned to the scrap area for remelting. Returned metal, including bad castings, comprises 50-55% by weight of the metal poured.

The final process, which occurs before the castings go to the machining and ancillary operations, is shot blasting and grinding. Shot blasting uses steel shot as an abrasive to remove adhering sand and cosmetically clean the surface of the cast valve. Grinding removes excess flanges, gates, and runners which remain.

Machining operations bring the valves to company specifications in order to meet company quality control requirements. The machining operations are performed by automated machining lines and manual machines such as lathes, drill presses, mills, and custom built machining centers. Other operations include heat treating the ductile iron products. Heating the products is done to increase the machinability of the castings.

The process flow within building 28 is a set of smaller operations that includes the main shipping and receiving department, the rubber molding operation, and ancillary processes. In the rubber molding operations, butterfly castings are placed in a shot blaster where they are cleaned. The particulate emissions from the shot blasting operations are controlled by a fabric filter. A bonding agent is then applied to the inner rim of the casting. This bonding agent enables the rubber to adhere to the iron. The castings are then transferred to the rubber mold area. The castings are preheated and placed into the rubber molding machine. If the rubber mold coating does not meet quality requirements, the valve is sent to the burn-off oven. Castings leaving the burn-off area then reenter the molding operation.

Ancillary processes are comprised of machining, painting, assembly, testing and shipping of the finished products. NIBCO also paints some valves. The surface coating operations are conducted in two paint booths located in Building 28. Additional coating operations, powder coating and dip painting are located in a separate building.

Regulations

The following table contains the regulations applicable to this permit.

Regulations
Arkansas Air Pollution Control Code, Regulation 18, effective February 15, 1999

Regulations of the Arkansas Plan of Implementation for Air Pollution Control, Regulation 19, effective December 19, 2004

The following table is a summary of emissions from the facility. This table, in itself, is not an enforceable condition of the permit.

Total Allowable Emissions

TOTAL ALLOWABLE EMISSIONS		
Pollutant	Emission Rates	
	lb/hr	tpy
PM	37.6	81.7
PM10	37	80.9

Other HAPs (non specific) *	51	10

Section III: PERMIT HISTORY

Permit 209-A was issued to NIBCO of Blytheville on January 25, 1974. This was the initial permit for the facility.

Permit 209-A(Modification) was issued to NIBCO on January 29, 1975. This modification allowed for the addition of a rotoclone to replace two filters and the addition of two small filters on the sand silos.

Permit 209-AR-1 was issued to NIBCO, Inc. on May 10, 1986. This modification allowed for the installation of a sand cooling system controlled by a cyclone. This is the first permit issued to the facility after Secondary Metal Production facilities were added to the source category list. The facility is still not a PSD major source because its foundry emissions are below the 100 TPY threshold.

Permit 209-AR-2 was issued to NIBCO, Inc. on March 4, 1993. This permit added several sources. These new sources were numbered SN-10 through SN-22. With the addition of these sources the potential emissions from foundry operations at NIBCO are now over 100 tpy and NIBCO is now a PSD major facility.

Permit 209-AR-3 was issued to NIBCO, Inc. on November 18, 1993. This permit modified SN-22 to include three burners. This additional source was not associated with the foundry operations at the facility.

Permit 209-AR-4 was issued to NIBCO, Inc. on September 30, 1994. This permit revised the emissions for VOC at the facility. Although PM_{10} emissions at the facility increased more than the 15 tpy significance level, there were no physical modifications to the facility. The emission increase was from changes in emission factors and hour of operation changes. These changes would not be defined as a modification under PSD regulations.

Permit 209-AR-5 was issued to NIBCO, Inc. on October 4, 1995. This permit added sources SN-23 through SN-28. These sources were not associated with foundry operations at the facility.

Permit 209-AR-6 was issued to NIBCO, Inc. on July 15, 1996. This permit added a core machine, (SN-29), and a shot blast machine, (SN-30). The total potential to emit for these two sources is 1.6 tpy of PM_{10}.

Permit 209-AR-7 was issued to NIBCO, Inc on June 14, 2002. This permit was to be the initial Title V permit for the facility. However, NIBCO submitted a revised application which had emissions which were lower than the Title V thresholds. The facility made several changes which are covered by this permit. The first change was removing the wet dust collectors and installing a baghouse, SN-01, to control particulate emissions from the foundry operations. The facility also installed a powder coating operation, SN-14, and changed chemicals in their Sinto Core Machine and added a scrubber, SN-32, to control its emissions.

NIBCO, Inc - Blytheville Division
Permit #: 209-AR-9
AFIN: 47-00009

Permit 209-AR-8 was issued on April 8, 2004. This permit makes changes to resolve the appeal issues. In this permit HAP flexibility was added for sources SN-13, 14, and 16. Testing requirements for SN-07, 08, and 10 were removed. The facility recalculated the emissions by removing a building collection efficiency and provided better documentation for the basis for the emission factors. Therefore, testing these sources was not necessary to show compliance. The pound per gallon VOC limit for SN-13 was corrected from 4.81 to 4.92. The emission limits for SN-25 were corrected. More specific language was added as to which requirements applied to SN-29, SN-29a and SN-30. And, the roadways and parking areas were added as insignificant activities.

The NIBCO facility is a valve manufacturing facility. However, the facility includes an iron foundry which is a PSD source category. The facility in previous permits was a major source for PSD since the iron foundry is a category source and emissions from the foundry operations of the facility were greater than 100 tpy for PM_{10}. Previous permits and permit applications stated incorrectly that the facility was not a category source. Therefore, all emissions associated with the foundry are subject to the 100 tpy PSD threshold. The remainder of the facility's emissions including foundry emissions is subject to the 250 tpy PSD threshold for non-category sources. This permit will include federal limits for NIBCO's emissions and thus making them no longer a major source under PSD or Title V.

Section IV: EMISSION UNIT INFORMATION

Specific Conditions

1. The permittee shall not exceed the emission rates set forth in the following table. [Regulation 19, §19.501 et seq., effective December 19, 2004 and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

3. Visible emissions may not exceed the limits specified in the following table of this permit as measured by EPA Reference Method 9. [A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

SN	Limit	Regulatory Citation
06a, 07, 08, 10, 11, 12, 15	20%	§19.503

01, 03, 04, 04a, 05, 13, 14, 16, 17, 18, 19, 21, 29, 30, 31, 32	5%	§18.501

4. The permittee shall not cause or permit the emission of air contaminants, including odors or water vapor and including an air contaminant whose emission is not otherwise prohibited by Regulation #18, if the emission of the air contaminant constitutes air pollution within the meaning of A.C.A. §8-4-303. [Regulation 18, §18.801 and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

5. The permittee shall not conduct operations in such a manner as to unnecessarily cause air contaminants and other pollutants to become airborne. [Regulation 18, §18.901 and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

6. Pursuant to §19.705 of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311, the permittee shall not melt more than 25,200 tons of iron in the induction furnaces, SN-07, in any consecutive 12 month period. Compliance with this condition will be shown by Specific Condition 7.

7. Pursuant to §19.705 and 40 CFR Part 52, Subpart E, the permittee shall maintain records of the iron melted in the induction furnaces, SN-07, each month. The permittee shall also keep records of the 12 month rolling total of iron processed. These records shall be kept on site, and shall be made available to Department personnel upon request.

8. Pursuant to §19.702 and 40 CFR Part 52, Subpart E, the permittee shall measure the particulate and PM_{10} emissions from the baghouse D-3, SN-03, within 180 days of the issuance of this permit. These tests shall be conducted in accordance with General Condition 7.

9. Pursuant to §19.705 of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311, the permittee shall not use a paint or thinner in SN-13, SN-14, or SN-16 with a VOC content greater than listed in the following table. Compliance will be shown by Specific Condition 12.

Source Number	VOC Content Limit (lb/gal)	
	Paint	Thinner
SN-13	4.92	7.20

SN-14	5.78	7.20
SN-16	6.58	7.20

10. Pursuant to §19.1004 of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311, the permittee shall not use a paint or thinner in SN-13, SN-14, or SN-16 with a HAP content greater than listed in the following table. The coating limits listed are as applied. Thinner usage is for clean up only. Compliance will be shown by Specific Condition 13.

Coatings Table		Thinners Table	
Minimum TLV	Maximum HAP Content	Minimum TLV	Maximum HAP Content
381.40	7.5	151.20	7.5
358.80	7.0	147.70	7.0
336.10	6.5	144.30	6.5
317.90	6.0	141.10	6.0

132.70	1.0	106.40	1.0
116.10	0.5	103.00	0.5
107.90	0.25	101.30	0.25

11. The permittee shall maintain VOC records of all paint and thinners used in SN-13, 14, and 16. The permittee shall maintain records which include the name of each VOC containing material used in SN-13, 14, and 16, and the amount of each VOC containing material used. The permittee shall maintain monthly records which include the monthly total of VOC emitted, the content of VOC in the material in pounds per gallon as verified by manufactures MSDS sheets or equivalent, and the consecutive 12 month total of each VOC emitted. The monthly records shall be updated by the 15th day of the month following the month the records represent. [§19.705 of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

12. The permittee shall maintain records of HAP emissions. The permittee shall maintain records which include the name of each HAP containing material used in SN-13, 14, and 16 and the amount of each HAP containing material used. The permittee shall maintain monthly records which include the monthly total of each HAP emitted, the content of each HAP in the material in pounds per gallon as verified by manufactures MSDS sheets or equilivant, the TLV of each HAP used, the consecutive 12 month total of each HAP emitted, and the consecutive 12 month total of emissions of all HAPs combined. The monthly records shall be updated by the 15th day of the month following the month the records represent. [§18.1004 of Regulation 18 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

13. The permittee shall not use an adhesive in SN-25 with a VOC content greater than 6.35 lb/gal or a release agent with a VOC content greater than 6.95 lb/gal. Compliance will be shown by Specific Condition 16. [§19.705 of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

14. The permittee shall not use an adhesive in SN-25 with a Ethyl Benzene content greater than 1.3 lb/gal or a Xylene content greater than 5.45 lb/gal. The permittee shall not use a release agent with a Hexane content greater than 3.74 lb/gal. Compliance will be shown by Specific Condition 17. [§19.1004 of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

15. The permittee shall maintain monthly VOC records of all VOC containing materials used in SN-25. These records shall include the name of the material, the VOC content of the material as verified by manufacturers MSDS or equivalent, and the 12 month rolling total of VOC emissions from SN-25. These records shall be updated by the 15th day of the month following the month which the records represent. [§19.705 of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

16. The permittee shall maintain records of HAP emissions from SN-25. The permittee shall maintain records which include the name of each HAP containing material used in SN-25, the content of each HAP in the material in weight percent, and the amount of each HAP containing material used. The permittee shall maintain monthly records which include the monthly total of each HAP emitted, the consecutive 12 month total of each HAP emitted, and the consecutive 12 month total of emissions of all HAPs combined. The monthly records shall be updated by the 15th day of the month following the month the records represent. [§18.1004 of Regulation 18 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

17. The permittee shall not use a binder in Phenolic Urethane No-bake process, SN-29a, with a VOC content greater than 3.62 lb/gal, and the permittee shall not use a binder in PUCB process SN-29 and SN-32, with a VOC content greater than 4.24 lb/gal. The catalysis used in the processes are 100% VOC by weight. Compliance with this condition will be shown by Specific Condition 19. The permittee uses a catalyst which is 100% Triethyl amine. [§19.705 of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

18. The permittee shall maintain monthly VOC records of all binders purchased for use in Phenolic Urethane No-bake process, SN-29a and the PUCB process, SN-29 and SN-32. These records shall include the name of the binder, the VOC content of the binder as verified by manufacturers MSDS or equivalent, and the 12 month rolling total of VOC emissions from the Phenolic Urethane No-bake process, SN-29 and the PUCB process, SN-32. These records shall be updated by the 15th day of the month following the month which the records represent. [§19.705 of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

19. The permittee shall not emit more than 17.3 tons of all HAPs combined from sources SN-13, 14, 16, and 25 in any consecutive 12 month period. The permittee shall maintain records of the total of HAPs emitted from sources SN-13, 14, 16, and 25 each month and consecutive 12 month total of HAPs emitted from these sources. These records shall be updated by the 15th day of the month following the month which the records represent. [§19.405(B) of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

20. The permittee shall not emit more than 9.9 tons of any single HAPs or 24.9 tpy of all HAPs combined from the facility in any consecutive 12 month period. The permittee shall maintain records of the total consecutive 12 month emissions of every single HAP emitted from the facility. These records shall be updated by the 15th day of the month following the month which the records represent. [§19.405(B) of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

21. The permittee shall operate the afterburner on SN-21 whenever the unit is operating and must maintain a minimum temperature greater than 1400ºF at SN-21 whenever the unit is in operation. The permittee must maintain daily records of the temperature of SN-21. These records shall be kept on site and made available to Department personnel upon request. [§19.705 of Regulation 19 and A.C.A. §8-4-203 as referenced by §8-4-304 and §8-4-311]

Section V: INSIGNIFICANT ACTIVITIES

The Department deems the following types of activities or emissions as insignificant on the basis of size, emission rate, production rate, or activity in accordance with Group A of the Insignificant Activities list found in Regulation 18 and 19 Appendix A. Insignificant activity emission determinations rely upon the information submitted by the permittee in an application dated September 9, 1997.

Section VI: GENERAL CONDITIONS

1. Any terms or conditions included in this permit that specify and reference Arkansas Pollution Control & Ecology Commission Regulation 18 or the Arkansas Water and Air Pollution Control Act (A.C.A. §8-4-101 et seq.) as the sole origin of and authority for the terms or conditions are not required under the Clean Air Act or any of its applicable requirements, and are not federally enforceable under the Clean Air Act. Arkansas Pollution Control & Ecology Commission Regulation 18 was adopted pursuant to the Arkansas Water and Air Pollution Control Act (A.C.A. §8-4-101 et seq.). Any terms or conditions included in this permit that specify and reference Arkansas Pollution Control & Ecology Commission Regulation 18 or the Arkansas Water and Air Pollution Control Act (A.C.A. §8-4-101 et seq.) as the origin of and authority for the terms or conditions are enforceable under this Arkansas statute.

2. This permit does not relieve the owner or operator of the equipment and/or the facility from compliance with all applicable provisions of the Arkansas Water and Air Pollution Control Act and the regulations promulgated under the Act. [A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

3. The permittee will notify the Department in writing within thirty (30) days after commencement of construction, completion of construction, first operation of equipment and/or facility, and first attainment of the equipment and/or facility target production rate. [Regulation 19, §19.704 and/or A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

4. Construction or modification must commence within eighteen (18) months from the date of permit issuance. [Regulation 19, §19.410(B) and/or Regulation 18, §18.309(B) and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

5. The permittee must keep records for five years to enable the Department to determine compliance with the terms of this permit such as hours of operation, throughput, upset conditions, and continuous monitoring data. The Department may use the records, at the discretion of the Department, to determine compliance with the conditions of the permit. [Regulation 19, §19.705 and/or Regulation 18, §18.1004 and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

6. A responsible official must certify any reports required by any condition contained in this permit and submit any reports to the Department at the address below. [Regulation 19, §19.705 and/or Regulation 18, §18.1004 and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

   Arkansas Department of Environmental Quality
   Air Division
   ATTN: Compliance Inspector Supervisor
   Post Office Box 8913

Little Rock, AR 72219

7. The permittee will test any equipment scheduled for testing, unless stated in the Specific Conditions of this permit or by any federally regulated requirements, within the following time frames: (1) newly constructed or modified equipment within sixty (60) days of achieving the maximum production rate, but no later than 180 days after initial start up of the permitted source or (2) existing equipment already operating according to the time frames set forth by the Department. The permittee must notify the Department of the scheduled date of compliance testing at least fifteen (15) days in advance of such test. The permittee must submit compliance test results to the Department within thirty (30) days after the completion of testing. [Regulation 19, §19.702 and/or Regulation 18, §18.1002 and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

8. The permittee will provide: [Regulation 19 , §19.702 and/or Regulation 18 , §18.1002 and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

    a. Sampling ports adequate for applicable test methods
    b. Safe sampling platforms
    c. Safe access to sampling platforms
    d. Utilities for sampling and testing equipment

9. The permittee will operate equipment, control apparatus and emission monitoring equipment within their design limitations. The permittee will maintain in good condition at all times equipment, control apparatus and emission monitoring equipment. [Regulation 19, §19.303 and/or Regulation 18, §18.1104 and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

10. If the permittee exceeds an emission limit established by this permit, the permittee will be deemed in violation of said permit and will be subject to enforcement action. The Department may forego enforcement action for emissions exceeding any limits established by this permit provided the following requirements are met: [Regulation 19, §19.601 and/or Regulation 18, §18.1101 and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

    a. The permittee demonstrates to the satisfaction of the Department that the emissions resulted from an equipment malfunction or upset and are not the result of negligence or improper maintenance, and the permittee took all reasonable measures to immediately minimize or eliminate the excess emissions.
    b. The permittee reports the occurrence or upset or breakdown of equipment (by telephone, facsimile, or overnight delivery) to the Department by the end of the next business day after the occurrence or the discovery of the occurrence.
    c. The permittee must submit to the Department, within five business days after the occurrence or the discovery of the occurrence, a full, written report of such occurrence, including a statement of all known causes and of the scheduling and nature of the actions to be taken to minimize or eliminate future occurrences,

including, but not limited to, action to reduce the frequency of occurrence of such conditions, to minimize the amount by which said limits are exceeded, and to reduce the length of time for which said limits are exceeded. If the information is included in the initial report, the information need not be submitted again.

11. The permittee shall allow representatives of the Department upon the presentation of credentials: [A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

    a. To enter upon the permittee's premises, or other premises under the control of the permittee, where an air pollutant source is located or in which any records are required to be kept under the terms and conditions of this permit;
    b. To have access to and copy any records required to be kept under the terms and conditions of this permit, or the Act;
    c. To inspect any monitoring equipment or monitoring method required in this permit;
    d. To sample any emission of pollutants; and
    e. To perform an operation and maintenance inspection of the permitted source.

12. The Department issued this permit in reliance upon the statements and presentations made in the permit application. The Department has no responsibility for the adequacy or proper functioning of the equipment or control apparatus. [A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

13. The Department may revoke or modify this permit when, in the judgment of the Department, such revocation or modification is necessary to comply with the applicable provisions of the Arkansas Water and Air Pollution Control Act and the regulations promulgated the Arkansas Water and Air Pollution Control Act. [Regulation 19, §19.410(A) and/or Regulation 18, §18.309(A) and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

14. This permit may be transferred. An applicant for a transfer must submit a written request for transfer of the permit on a form provided by the Department and submit the disclosure statement required by Arkansas Code Annotated '8 1 106 at least thirty (30) days in advance of the proposed transfer date. The permit will be automatically transferred to the new permittee unless the Department denies the request to transfer within thirty (30) days of the receipt of the disclosure statement. The Department may deny a transfer on the basis of the information revealed in the disclosure statement or other investigation or, deliberate falsification or omission of relevant information. [Regulation 19, §19.407(B) and/or Regulation 18, §18.307(B) and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

15. This permit shall be available for inspection on the premises where the control apparatus is located. [A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

16. This permit authorizes only those pollutant emitting activities addressed herein. [A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

17. This permit supersedes and voids all previously issued air permits for this facility. [Regulation 18 and 19 and A.C.A. §8-4-203 as referenced by A.C.A. §8-4-304 and §8-4-311]

18. The permittee must pay all permit fees in accordance with the procedures established in Regulation No. 9. [A.C.A §8-1-105(c)]

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

EFFECTIVE DATE: January 14, 2015

ISSUED TO

Asama Coldwater Manufacturing, Inc.
and
Gokoh Coldwater, Inc.

State Registration Number (SRN): N5814

LOCATED AT
180 Asama Parkway, Coldwater, Michigan 49036
100 Concept Drive, Coldwater, Michigan 49036

RENEWABLE OPERATING PERMIT

Permit Number: MI-ROP-N5814-2015

Expiration Date: January 14, 2020

Administratively Complete ROP Renewal Application Due Between July 14, 2018 and July 14, 2019

This Renewable Operating Permit (ROP) is issued in accordance with and subject to Section 5506(3) of Part 55, Air Pollution Control, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (Act 451). Pursuant to Michigan Air Pollution Control Rule 210(1), this ROP constitutes the permittee's authority to operate the stationary source identified above in accordance with the general conditions, special conditions and attachments contained herein. Operation of the stationary source and all emission units listed in the permit are subject to all applicable future or amended rules and regulations pursuant to Act 451 and the federal Clean Air Act.

SOURCE-WIDE PERMIT TO INSTALL

Permit Number: MI-PTI-N5814-2015

This Permit to Install (PTI) is issued in accordance with and subject to Section 5505(5) of Act 451. Pursuant to Michigan Air Pollution Control Rule 214a, the terms and conditions herein, identified by the underlying applicable requirement citation of Rule 201(1)(a), constitute a federally enforceable PTI. The PTI terms and conditions do not expire and remain in effect unless the criteria of Rule 201(6) are met. Operation of all emission units identified in the PTI is subject to all applicable future or amended rules and regulations pursuant to Act 451 and the federal Clean Air Act.

Michigan Department of Environmental Quality

Mary A. Douglas, Kalamazoo District Supervisor

AUTHORITY AND ENFORCEABILITY

For the purpose of this permit, the **permittee** is defined as any person who owns or operates an emission unit at a stationary source for which this permit has been issued. The **department** is defined in Rule 104(d) as the Director of the Michigan Department of Environmental Quality (MDEQ) or his or her designee.

The permittee shall comply with all specific details in the permit terms and conditions and the cited underlying applicable requirements. All terms and conditions in this ROP are both federally enforceable and state enforceable unless otherwise footnoted. Certain terms and conditions are applicable to most stationary sources for which an ROP has been issued. These general conditions are included in Part A of this ROP. Other terms and conditions may apply to a specific emission unit, several emission units which are represented as a flexible group, or the entire stationary source which is represented as a Source-Wide group. Special conditions are identified in Parts B, C, D and/or the appendices.

In accordance with Rule 213(2)(a), all underlying applicable requirements will be identified for each ROP term or condition. All terms and conditions that are included in a PTI, are streamlined or subsumed, or is state only enforceable will be noted as such.

In accordance with Section 5507 of Act 451, the permittee has included in the ROP application a compliance certification, a schedule of compliance, and a compliance plan. For applicable requirements with which the source is in compliance, the source will continue to comply with these requirements. For applicable requirements with which the source is not in compliance, the source will comply with the detailed schedule of compliance requirements that are incorporated as an appendix in this ROP. Furthermore, for any applicable requirements effective after the date of issuance of this ROP, the stationary source will meet the requirements on a timely basis, unless the underlying applicable requirement requires a more detailed schedule of compliance.

Issuance of this permit does not obviate the necessity of obtaining such permits or approvals from other units of government as required by law.

Section 1 – Asama Coldwater Manufacturing, Inc.

A. GENERAL CONDITIONS

Permit Enforceability

- All conditions in this permit are both federally enforceable and state enforceable unless otherwise noted. **(R 336.1213(5))**

- Those conditions that are hereby incorporated in a state-only enforceable Source-Wide PTI pursuant to Rule 201(2)(d) are designated by footnote one. **(R 336.1213(5)(a), R 336.1214a(5))**

- Those conditions that are hereby incorporated in a federally enforceable Source-Wide PTI pursuant to Rule 201(2)(c) are designated by footnote two. **(R 336.1213(5)(b), R 336.1214a(3))**

General Provisions

1. The permittee shall comply with all conditions of this ROP. Any ROP noncompliance constitutes a violation of Act 451, and is grounds for enforcement action, for ROP revocation or revision, or for denial of the renewal of the ROP. All terms and conditions of this ROP that are designated as federally enforceable are enforceable by the Administrator of the United States Environmental Protection Agency (USEPA) and by citizens under the provisions of the federal Clean Air Act (CAA). Any terms and conditions based on applicable requirements which are designated as "state only" are not enforceable by the USEPA or citizens pursuant to the CAA. **(R 336.1213(1)(a))**

2. It shall not be a defense for the permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this ROP. **(R 336.1213(1)(b))**

3. This ROP may be modified, revised, or revoked for cause. The filing of a request by the permittee for a permit modification, revision, or termination, or a notification of planned changes or anticipated noncompliance does not stay any ROP term or condition. This does not supersede or affect the ability of the permittee to make changes, at the permittee's own risk, pursuant to Rule 215 and Rule 216. **(R 336.1213(1)(c))**

4. The permittee shall allow the department, or an authorized representative of the department, upon presentation of credentials and other documents as may be required by law and upon stating the authority for and purpose of the investigation, to perform any of the following activities **(R 336.1213(1)(d))**:
   a. Enter, at reasonable times, a stationary source or other premises where emissions-related activity is conducted or where records must be kept under the conditions of the ROP.
   b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of the ROP.
   c. Inspect, at reasonable times, any of the following:
      i. Any stationary source.
      ii. Any emission unit.
      iii. Any equipment, including monitoring and air pollution control equipment.
      iv. Any work practices or operations regulated or required under the ROP.
   d. As authorized by Section 5526 of Act 451, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the ROP or applicable requirements.

5. The permittee shall furnish to the department, within a reasonable time, any information the department may request, in writing, to determine whether cause exists for modifying, revising, or revoking the ROP or to determine compliance with this ROP. Upon request, the permittee shall also furnish to the department copies of any records that are required to be kept as a term or condition of this ROP. For information which is claimed by the permittee to be confidential, consistent with the requirements of the 1976 PA 442, MCL §15.231 et seq., and known as the Freedom of Information Act, the person may also be required to furnish the records directly to the USEPA together with a claim of confidentiality. **(R 336.1213(1)(e))**

6. A challenge by any person, the Administrator of the USEPA, or the department to a particular condition or a part of this ROP shall not set aside, delay, stay, or in any way affect the applicability or enforceability of any other condition or part of this ROP. **(R 336.1213(1)(f))**

7. The permittee shall pay fees consistent with the fee schedule and requirements pursuant to Section 5522 of Act 451. **(R 336.1213(1)(g))**

8. This ROP does not convey any property rights or any exclusive privilege. **(R 336.1213(1)(h))**

Equipment & Design

9. Any collected air contaminants shall be removed as necessary to maintain the equipment at the required operating efficiency. The collection and disposal of air contaminants shall be performed in a manner so as to minimize the introduction of contaminants to the outer air. Transport of collected air contaminants in Priority I and II areas requires the use of material handling methods specified in Rule 370(2). **(R 336.1370)**

10. Any air cleaning device shall be installed, maintained, and operated in a satisfactory manner and in accordance with the Michigan Air Pollution Control rules and existing law. **(R 336.1910)**

Emission Limits

11. Except as provided in Subrules 2, 3, and 4 of Rule 301, states in part; "a person shall not cause or permit to be discharged into the outer air from a process or process equipment a visible emission of a density greater than the most stringent of Rule 301(1)(a) or (b) unless otherwise specified in this ROP." The grading of visible emissions shall be determined in accordance with Rule 303 **(R 336.1301(1) in pertinent part)**:
    a. A 6-minute average of 20 percent opacity, except for one 6-minute average per hour of not more than 27 percent opacity.
    b. A limit specified by an applicable federal new source performance standard.

12. The permittee shall not cause or permit the emission of an air contaminant or water vapor in quantities that cause, alone or in reaction with other air contaminants, either of the following:
    a. Injurious effects to human health or safety, animal life, plant life of significant economic value, or property.[1] **(R 336.1901(a))**
    b. Unreasonable interference with the comfortable enjoyment of life and property.[1] **(R 336.1901(b))**

Testing/Sampling

13. The department may require the owner or operator of any source of an air contaminant to conduct acceptable performance tests, at the owner's or operator's expense, in accordance with Rule 1001 and Rule 1003, under any of the conditions listed in Rule 1001(1). **(R 336.2001)**

14. Any required performance testing shall be conducted in accordance with Rule 1001(2), Rule 1001(3) and Rule 1003. **(R 336.2001(2), R 336.2001(3), R 336.2003(1))**

15. Any required test results shall be submitted to the Air Quality Division (AQD) in the format prescribed by the applicable reference test method within 60 days following the last date of the test. **(R 336.2001(4))**

Monitoring/Recordkeeping

16. Records of any periodic emission or parametric monitoring required in this ROP shall include the following information specified in Rule 213(3)(b)(i), where appropriate **(R 336.1213(3)(b))**:
    a. The date, location, time, and method of sampling or measurements.
    b. The dates the analyses of the samples were performed.
    c. The company or entity that performed the analyses of the samples.
    d. The analytical techniques or methods used.
    e. The results of the analyses.
    f. The related process operating conditions or parameters that existed at the time of sampling or measurement.

17. All required monitoring data, support information and all reports, including reports of all instances of deviation from permit requirements, shall be kept and furnished to the department upon request for a period of not less than 5 years from the date of the monitoring sample, measurement, report or application. Support information includes all calibration and maintenance records and all original strip-chart recordings, or other original data records, for continuous monitoring instrumentation and copies of all reports required by the ROP. **(R 336.1213(1)(e), R 336.1213(3)(b)(ii))**

Certification & Reporting

18. Except for the alternate certification schedule provided in Rule 213(3)(c)(iii)(B), any document required to be submitted to the department as a term or condition of this ROP shall contain an original certification by a Responsible Official which states that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete. **(R 336.1213(3)(c))**

19. A Responsible Official shall certify to the appropriate AQD District Office and to the USEPA that the stationary source is and has been in compliance with all terms and conditions contained in the ROP except for deviations that have been or are being reported to the appropriate AQD District Office pursuant to Rule 213(3)(c). This certification shall include all the information specified in Rule 213(4)(c)(i) through (v) and shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the certification are true, accurate, and complete. The USEPA address is: USEPA, Air Compliance Data - Michigan, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. **(R 336.1213(4)(c))**

20. The certification of compliance shall be submitted annually for the term of this ROP as detailed in the special conditions, or more frequently if specified in an applicable requirement or in this ROP. **(R 336.1213(4)(c))**

21. The permittee shall promptly report any deviations from ROP requirements and certify the reports. The prompt reporting of deviations from ROP requirements is defined in Rule 213(3)(c)(ii) as follows, unless otherwise described in this ROP **(R 336.1213(3)(c))**:
    a. For deviations that exceed the emissions allowed under the ROP, prompt reporting means reporting consistent with the requirements of Rule 912 as detailed in Condition 25. All reports submitted pursuant to this paragraph shall be promptly certified as specified in Rule 213(3)(c)(iii).
    b. For deviations which exceed the emissions allowed under the ROP and which are not reported pursuant to Rule 912 due to the duration of the deviation, prompt reporting means the reporting of all deviations in the semiannual reports required by Rule 213(3)(c)(i). The report shall describe reasons for each deviation and the actions taken to minimize or correct each deviation.
    c. For deviations that do not exceed the emissions allowed under the ROP, prompt reporting means the reporting of all deviations in the semiannual reports required by Rule 213(3)(c)(i). The report shall describe the reasons for each deviation and the actions taken to minimize or correct each deviation.

22. For reports required pursuant to Rule 213(3)(c)(ii), prompt certification of the reports is described in Rule 213(3)(c)(iii) as either of the following **(R 336.1213(3)(c))**:
    a. Submitting a certification by a Responsible Official with each report which states that, based on information and belief formed after reasonable inquiry, the statements and information in the report are true, accurate, and complete.
    b. Submitting, within 30 days following the end of a calendar month during which one or more prompt reports of deviations from the emissions allowed under the ROP were submitted to the department pursuant to Rule 213(3)(c)(ii), a certification by a Responsible Official which states that, "based on information and belief formed after reasonable inquiry, the statements and information contained in each of the reports submitted during the previous month were true, accurate, and complete". The certification shall include a listing of the reports that are being certified. Any report submitted pursuant to Rule 213(3)(c)(ii) that will be certified on a monthly basis pursuant to this paragraph shall include a statement that certification of the report will be provided within 30 days following the end of the calendar month.

23. Semiannually for the term of the ROP as detailed in the special conditions, or more frequently if specified, the permittee shall submit certified reports of any required monitoring to the appropriate AQD District Office. All instances of deviations from ROP requirements during the reporting period shall be clearly identified in the reports. **(R 336.1213(3)(c)(i))**

24. On an annual basis, the permittee shall report the actual emissions, or the information necessary to determine the actual emissions, of each regulated air pollutant as defined in Rule 212(6) for each emission unit utilizing the emissions inventory forms provided by the department. **(R 336.1212(6))**

25. The permittee shall provide notice of an abnormal condition, start-up, shutdown, or malfunction that results in emissions of a hazardous or toxic air pollutant which continue for more than one hour in excess of any applicable standard or limitation, or emissions of any air contaminant continuing for more than two hours in excess of an applicable standard or limitation, as required in Rule 912, to the appropriate AQD District Office. The notice shall be provided not later than two business days after the start-up, shutdown, or discovery of the abnormal conditions or malfunction. Notice shall be by any reasonable means, including electronic, telephonic, or oral communication. Written reports, if required under Rule 912, must be submitted to the appropriate AQD District Supervisor within 10 days after the start-up or shutdown occurred, within 10 days after the abnormal conditions or malfunction has been corrected, or within 30 days of discovery of the abnormal conditions or malfunction, whichever is first. The written reports shall include all of the information required in Rule 912(5) and shall be certified by a Responsible Official in a manner consistent with the CAA. **(R 336.1912)**

Permit Shield

26. Compliance with the conditions of the ROP shall be considered compliance with any applicable requirements as of the date of ROP issuance, if either of the following provisions is satisfied **(R 336.1213(6)(a)(i), R 336.1213(6)(a)(ii))**:
    a. The applicable requirements are included and are specifically identified in the ROP.
    b. The permit includes a determination or concise summary of the determination by the department that other specifically identified requirements are not applicable to the stationary source.

    Any requirements identified in Part E of this ROP have been identified as non-applicable to this ROP and are included in the permit shield.

27. Nothing in this ROP shall alter or affect any of the following:
    a. The provisions of Section 303 of the CAA, emergency orders, including the authority of the USEPA under Section 303 of the CAA. **(R 336.1213(6)(b)(i))**
    b. The liability of the owner or operator of this source for any violation of applicable requirements prior to or at the time of this ROP issuance. **(R 336.1213(6)(b)(ii))**
    c. The applicable requirements of the acid rain program, consistent with Section 408(a) of the CAA. **(R 336.1213(6)(b)(iii))**

d. The ability of the USEPA to obtain information from a source pursuant to Section 114 of the CAA. **(R 336.1213(6)(b)(iv))**

28. The permit shield shall not apply to provisions incorporated into this ROP through procedures for any of the following:
    a. Operational flexibility changes made pursuant to Rule 215. **(R 336.1215(5))**
    b. Administrative Amendments made pursuant to Rule 216(1)(a)(i)-(iv). **(R 336.1216(1)(b)(iii))**
    c. Administrative Amendments made pursuant to Rule 216(1)(a)(v) until the amendment has been approved by the department. **(R 336.1216(1)(c)(iii))**
    d. Minor Permit Modifications made pursuant to Rule 216(2). **(R 336.1216(2)(f))**
    e. State-Only Modifications made pursuant to Rule 216(4) until the changes have been approved by the department. **(R 336.1216(4)(e))**

29. Expiration of this ROP results in the loss of the permit shield. If a timely and administratively complete application for renewal is submitted not more than 18 months, but not less than 6 months, before the expiration date of the ROP, but the department fails to take final action before the end of the ROP term, the existing ROP does not expire until the renewal is issued or denied, and the permit shield shall extend beyond the original ROP term until the department takes final action. **(R 336.1217(1)(c), R 336.1217(1)(a))**

Revisions

30. For changes to any process or process equipment covered by this ROP that do not require a revision of the ROP pursuant to Rule 216, the permittee must comply with Rule 215. **(R 336.1215, R 336.1216)**

31. A change in ownership or operational control of a stationary source covered by this ROP shall be made pursuant to Rule 216(1). **(R 336.1219(2))**

32. For revisions to this ROP, an administratively complete application shall be considered timely if it is received by the department in accordance with the time frames specified in Rule 216. **(R 336.1210(9))**

33. Pursuant to Rule 216(1)(b)(iii), Rule 216(2)(d) and Rule 216(4)(d), after a change has been made, and until the department takes final action, the permittee shall comply with both the applicable requirements governing the change and the ROP terms and conditions proposed in the application for the modification. During this time period, the permittee may choose to not comply with the existing ROP terms and conditions that the application seeks to change. However, if the permittee fails to comply with the ROP terms and conditions proposed in the application during this time period, the terms and conditions in the ROP are enforceable. **(R 336.1216(1)(c)(iii), R 336.1216(2)(d), R 336.1216(4)(d))**

Reopenings

34. A ROP shall be reopened by the department prior to the expiration date and revised by the department under any of the following circumstances:
    a. If additional requirements become applicable to this stationary source with three or more years remaining in the term of the ROP, but not if the effective date of the new applicable requirement is later than the ROP expiration date. **(R 336.1217(2)(a)(i))**
    b. If additional requirements pursuant to Title IV of the CAA become applicable to this stationary source. **(R 336.1217(2)(a)(ii))**
    c. If the department determines that the ROP contains a material mistake, information required by any applicable requirement was omitted, or inaccurate statements were made in establishing emission limits or the terms or conditions of the ROP. **(R 336.1217(2)(a)(iii))**
    d. If the department determines that the ROP must be revised to ensure compliance with the applicable requirements. **(R 336.1217(2)(a)(iv))**

Renewals

35. For renewal of this ROP, an administratively complete application shall be considered timely if it is received by the department not more than 18 months, but not less than 6 months, before the expiration date of the ROP. **(R 336.1210(7))**

Stratospheric Ozone Protection

36. If the permittee is subject to Title 40 of the Code of Federal Regulations (CFR), Part 82 and services, maintains, or repairs appliances except for motor vehicle air conditioners (MVAC), or disposes of appliances containing refrigerant, including MVAC and small appliances, or if the permittee is a refrigerant reclaimer, appliance owner or a manufacturer of appliances or recycling and recovery equipment, the permittee shall comply with all applicable standards for recycling and emissions reduction pursuant to 40 CFR, Part 82, Subpart F.

37. If the permittee is subject to 40 CFR, Part 82, and performs a service on motor (fleet) vehicles when this service involves refrigerant in the MVAC, the permittee is subject to all the applicable requirements as specified in 40 CFR, Part 82, Subpart B, Servicing of Motor Vehicle Air Conditioners. The term "motor vehicle" as used in Subpart B does not include a vehicle in which final assembly of the vehicle has not been completed by the original equipment manufacturer. The term MVAC as used in Subpart B does not include the air-tight sealed refrigeration system used for refrigerated cargo or an air conditioning system on passenger buses using Hydrochlorofluorocarbon-22 refrigerant.

Risk Management Plan

38. If subject to Section 112(r) of the CAA and 40 CFR, Part 68, the permittee shall register and submit to the USEPA the required data related to the risk management plan for reducing the probability of accidental releases of any regulated substances listed pursuant to Section 112(r)(3) of the CAA as amended in 40 CFR 68.130. The list of substances, threshold quantities, and accident prevention regulations promulgated under 40 CFR, Part 68, do not limit in any way the general duty provisions under Section 112(r)(1).

39. If subject to Section 112(r) of the CAA and 40 CFR, Part 68, the permittee shall comply with the requirements of 40 CFR, Part 68, no later than the latest of the following dates as provided in 40 CFR 68.10(a):
    a. June 21, 1999,
    b. Three years after the date on which a regulated substance is first listed under 40 CFR 68.130, or
    c. The date on which a regulated substance is first present above a threshold quantity in a process.

40. If subject to Section 112(r) of the CAA and 40 CFR, Part 68, the permittee shall submit any additional relevant information requested by any regulatory agency necessary to ensure compliance with the requirements of 40 CFR, Part 68.

41. If subject to Section 112(r) of the CAA and 40 CFR, Part 68, the permittee shall annually certify compliance with all applicable requirements of Section 112(r) as detailed in Rule 213(4)(c)). **(40 CFR, Part 68)**

Emission Trading

42. Emission averaging and emission reduction credit trading are allowed pursuant to any applicable interstate or regional emission trading program that has been approved by the Administrator of the USEPA as a part of Michigan's State Implementation Plan. Such activities must comply with Rule 215 and Rule 216. **(R 336.1213(12))**

Permit To Install (PTI)

43. The process or process equipment included in this permit shall not be reconstructed, relocated, or modified unless a PTI authorizing such action is issued by the department, except to the extent such action is exempt from the PTI requirements by any applicable rule. [2] **(R 336.1201(1))**

44. The department may, after notice and opportunity for a hearing, revoke PTI terms or conditions if evidence indicates the process or process equipment is not performing in accordance with the terms and conditions of the PTI or is violating the department's rules or the CAA. [2] **(R 336.1201(8), Section 5510 of Act 451)**

45. The terms and conditions of a PTI shall apply to any person or legal entity that now or hereafter owns or operates the process or process equipment at the location authorized by the PTI. If a new owner or operator submits a written request to the department pursuant to Rule 219 and the department approves the request, this PTI will be amended to reflect the change of ownership or operational control. The request must include all of the information required by Subrules (1)(a), (b) and (c) of Rule 219. The written request shall be sent to the appropriate AQD District Supervisor, MDEQ. [2] **(R 336.1219)**

46. If the installation, reconstruction, relocation, or modification of the equipment for which PTI terms and conditions have been approved has not commenced within 18 months, or has been interrupted for 18 months, the applicable terms and conditions from that PTI shall become void unless otherwise authorized by the department. Furthermore, the person to whom that PTI was issued, or the designated authorized agent, shall notify the department via the Supervisor, Permit Section, MDEQ, AQD, P. O. Box 30260, Lansing, Michigan 48909, if it is decided not to pursue the installation, reconstruction, relocation, or modification of the equipment allowed by the terms and conditions from that PTI. [2] **(R 336.1201(4))**

Footnotes:
[1]This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

B. SOURCE-WIDE CONDITIONS

Part B outlines the Source-Wide Terms and Conditions that apply to this stationary source. The permittee is subject to these special conditions for the stationary source in addition to the general conditions in Part A and any other terms and conditions contained in this ROP.

The permittee shall comply with all specific details in the special conditions and the underlying applicable requirements cited. If a specific condition type does not apply to this source, NA (not applicable) has been used in the table. If there are no Source-Wide Conditions, this section will be left blank.

C. EMISSION UNIT CONDITIONS

Part C outlines terms and conditions that are specific to individual emission units listed in the Emission Unit Summary Table. The permittee is subject to the special conditions for each emission unit in addition to the General Conditions in Part A and any other terms and conditions contained in this ROP.

The permittee shall comply with all specific details in the special conditions and the underlying applicable requirements cited. If a specific condition type does not apply, NA (not applicable) has been used in the table. If there are no conditions specific to individual emission units, this section will be left blank.

EMISSION UNIT SUMMARY TABLE

The descriptions provided below are for informational purposes and do not constitute enforceable conditions.

Emission Unit ID	Emission Unit Description (Including Process Equipment & Control Device(s))	Installation Date/ Modification Date	Flexible Group ID
EUMPCC-S1	Metal melting, pouring, and casting cooling process equipment with two electric induction furnaces with a combined daily average melting capacity of 8 tons per hour. Emissions from these processes are controlled by a 49,000 dscfm baghouse.	06/17/97 02/25/04	FGFOUNDRY-S1 FGCAM_UNITS-S1
EUSANDSYSTEM-S1	Mold making, shakeout, and sand processing equipment. Emissions from these processes are controlled by a 66,000 dscfm baghouse.	06/17/97 02/25/04	FGFOUNDRY-S1 FGCAM_UNITS-S1
EUSHOTBLAST-S1	A shotblast machine with a mechanical pre-cleaner followed by a 7,500 scfm baghouse that vents outside on or after August 14, 2006.	06/17/97 08/14/06	NA
EU-MP-S1	Consists of two electric induction melting furnaces with an 11 ton holding capacity each, and a monorail pouring station with three ladles. Emissions from melting and pouring processes are controlled by associated hoods, enclosures, ductwork, and a 37,500 acfm baghouse.	12/01/07 NA	FG-NEWFOUNDRY-S1
EU-MCS-S1	Consists of the automated mold cooling conveyors and automated sand shakeout lines, including a flat deck shakeout system. Emissions from these processes are controlled by associated hoods, enclosures, ductwork, a baghouse, and a regenerative thermal oxidizer. The exhaust gas flow from this unit is approximately 61,200 acfm.	01/01/07 06/20/13	FG-NEWFOUNDRY-S1 FGCAM_UNITS-S1
EU-SS-S1	Consists of the molding machine and related sand handling equipment. Emissions from the mold making process are controlled by associated hoods, enclosures, ductwork, and a 56,900 acfm baghouse.	12/01/07	FG-NEWFOUNDRY-S1 FGCAM_UNITS-S1
EU-CCFBACK-S1	Consists of the back section of casting cooling conveyors and a shot blast machine. Emissions from this emission unit are controlled by associated hoods, enclosures, ductwork, and a 65,360 acfm baghouse.	12/01/07	FG-NEWFOUNDRY-S1 FGCAM_UNITS-S1

Emission Unit ID	Emission Unit Description (Including Process Equipment & Control Device(s))	Installation Date/ Modification Date	Flexible Group ID
EUCOLDCLEANER-S1	Any cold cleaner that is grandfathered or exempt from Rule 201 pursuant to Rule 281(h), or Rule 285(r)(iv). Existing cold cleaners were placed into operation prior to July 1, 1979. New cold cleaners were placed into operation on or after July 1, 1979.	06/17/97 NA	FG-COLDCLEANERS-S1
EUCONVEYOR-S1	Casting cooling vibratory conveyor section that is covered and ventilated to a 28,000 dscfm baghouse.	01/01/04 NA	FG-RULE290-S1
EU-EMERGEN1-S1	Diesel fired emergency power generator for the new foundry.	01/07/07	NA
EU-EMERGEN2-S1	Natural gas fired emergency power generator for the existing foundry.	01/08/96	NA
EULine 1-S1	The GEOMET paint line systems consisting of a mixing room, a paint spray booth equipped with HVLP applicators and dry filter overspray control, and an induction cure process consisting of pre-curing and final cure steps for coating of metallic surfaces.	12/22/11	FG-COATING-S1, FG-MACT MMMM-S1
EULine 2-S1	The GEOMET paint line systems consisting of a mixing room, a paint spray booth equipped with HVLP applicators and dry filter overspray control, and an induction cure process consisting of pre-curing and final cure steps for coating of metallic surfaces.	03/25/14	FG-COATING-S1, FG-MACT MMMM-S1
EULine 3-S1	The GEOMET paint line systems consisting of a mixing room, a paint spray booth equipped with HVLP applicators and dry filter overspray control, and an induction cure process consisting of pre-curing and final cure steps for coating of metallic surfaces.	To Be Determined	FG-COATING-S1, FG-MACT MMMM-S1

EUMPCC-S1
EMISSION UNIT CONDITIONS

DESCRIPTION

Metal melting, pouring, and casting cooling process equipment with two electric induction furnaces with a combined daily average melting capacity of 8 tons per hour. Emissions from these processes are controlled by a 49,000 dscfm baghouse.

Flexible Group ID: FGFOUNDRY-S1, FGCAM_UNITS-S1

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Carbon Monoxide	57.5 pph[2]	Test Protocol	EUMPCC-S1	SC V.2	**R 336.1205(3)**
2. Particulate Matter (or Total Metal HAPs)	0.005 gr/dscf exhaust gases or 2.1 pph[2] Or 0.0004 gr/dscf exhaust gases	Test Protocol	EUMPCC-S1	SC V.2, V.4	**R 336.1331** **40 CFR 63.7690(a)(1)(i)**
3. Volatile Organic Compounds	10.0 pph[2]	Test Protocol	EUMPCC-S1	SC V.2	**R 336.1702**
4. Opacity	10 percent[2]	Six-minute average	Stack listed in VIII	SC V.3	**R 336.1301(1)(c)**
5. Visible Emissions	20% opacity (except for one 6-minute average per hour of not more than 27% opacity)	Test Protocol	Any building or structure housing EUMPCC-S1	SC V.1	**40 CFR 63.7690(a)(7)**

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
NA	NA	NA	NA	NA	NA

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall submit to the AQD District Supervisor, for review and approval, an operation and maintenance (O&M) plan for each capture and control system and control device for an emission unit subject to an emission limit as described in 40 CFR 63.7710. The plan shall include, but is not limited to, the following:
   a. Monthly inspections of the equipment that is important to the performance of the total capture system. **(40 CFR 63.7710(b)(1))**
   b. Operating limits for each capture system for an emission unit subject to a limit for VOHAP or TEA. **(40 CFR 63.7710(b)(2))**
   c. Preventative maintenance plan for each control device, including a schedule. **(40 CFR 63.7710(b)(3))**
   d. A site-specific monitoring plan for each bag leak detection system. **(40 CFR 63.7710(b)(4))**
   e. Corrective action plan for each baghouse. **(40 CFR 63.7710(b)(5))**
   f. Procedures for igniting gases from mold vents. **(40 CFR 63.7710(b)(6))**

   The permittee shall maintain and implement the approved O&M plans at all times. **(40 CFR 63.7710, 40 CFR 63.7745))**

2. For each capture system, wet scrubber, acid wet scrubber, or combustion device, the permittee shall establish site-specific operating limits in the O&M plans according to the procedures specified in 40 CFR 63.7733. **(40 CFR 63.7733)**

3. The permittee shall comply with the emission limits, work practice standards, and operation and maintenance requirements at all times, except during periods of startup, shutdown, or malfunction. **(40 CFR 63.7720(a))**

4. The permittee shall develop and implement a written startup, shutdown and malfunction plan (SSMP) in accordance with 40 CFR 63.6(e)(3). This plan must address the startup, shutdown and corrective actions in the event of a malfunction of the emission capture system or the add-on control device. The permittee shall operate in accordance with the SSMP when applicable. **(40 CFR 63.7720(c), 40 CFR 63.6(e)(3))**

5. For each segregated scrap storage area, bin or pile, the permittee shall prepare and operate at all times according to a written certification that the facility purchases and uses only charge material that does not include post-consumer automotive body scrap, post-consumer engine blocks, post-consumer oil filters, oily turnings, lead components, mercury switches, plastics or free organic liquids as specified in 40 CFR 63.7700(b) –OR– the permittee shall prepare and operate according to an approved written plan for the selection and inspection of iron and steel scrap as specified in 40 CFR 63.7700(c).[2] **(40 CFR 63.7700(a), 40 CFR 63.7700(b), 40 CFR 63.7700(c)**

IV. DESIGN/EQUIPMENT PARAMETER(S)

NA

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall conduct a performance test to demonstrate compliance with the opacity limit in 40 CFR 63.7690(a)(7), following the test methods and procedures in 40 CFR 63.7732(d). Subsequent compliance testing shall be conducted no less frequently than every six months. **(40 CFR 63.7731(b))**

2. Within 180 days of permit issuance, verification of CO, PM and VOC emission rates from EUMPCC-S1, by testing at owner's expense, in accordance with Department's requirements, will be required. No less than 30 days prior to testing, a complete test plan shall be submitted to the AQD. The final plan must be approved by the AQD prior to testing. Verification of emission rates includes the submittal of a complete report of the test results to the AQD within 60 days following the last date of the test.[2] **(R 336.1205, R 336.1702, R 336.2001, R 336.2003, R 336.2004, R 336.1213(3))**

3. On a weekly basis, the permittee shall perform and record the results of six-minute observations of visible emissions from SVMPCC-S1 during daylight hours under routine maximum operating conditions. If visible

emissions are observed, the permittee shall initiate appropriate corrective actions listed in the approved operation and maintenance (O & M) plan. **(R 336.1213(3))**

4. The permittee shall conduct subsequent compliance testing to demonstrate compliance with all applicable emission limits, no less frequently than every five years. This requirement does not apply if a Continuous Emission Monitoring System (CEMS) is used to demonstrate continuous compliance. **(40 CFR 63.7731(a))**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall monitor the relative change in PM loading using a bag leak detection system for any baghouse used to meet PM or Total Metal HAP emission limits. **(40 CFR 63.7740(b))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

4. The permittee shall report each instance in which each emission limitation, each work practice standard, and each operation and maintenance requirement was not met, in accordance with the requirements of 40 CFR 63.7751. **(40 CFR 63.7746, 40 CFR 63.7751)**

5. The permittee shall submit applicable notifications specified in 40 CFR 63.6(h)(4) and (5), 40 CFR 63.7(b) and (c), 63.8(e), 63.8(f)(4) through (6), and 63.9(d) through (h) for a notification of intent to conduct a performance test, and a notification of compliance status as specified in 40 CFR 63.7750. **(40 CFR 63.7750)**

6. The permittee shall submit all semiannual compliance reports and semiannual reports of monitoring and deviations from any emissions limitation or operation and maintenance requirement as required by 40 CFR 63.7751(a), (b), and (d). **(40 CFR 63.7751 (a), (b), and (d))**

7. If a startup, shutdown, or malfunction occurs during the semiannual reporting period, that is not consistent with the SSMP, the permittee shall submit an immediate SSM report according to the requirements of 40 CFR 63.10(d)(5)(ii). **(40 CFR 63.10(d)(5)(ii), 40 CFR 63.7751(c))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SVMPCC-S1	52[2]	90[2]	**40 CFR 52.21(c) & (d)**

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable provisions of the National Emission Standards for Hazardous Air Pollutants, as specified in 40 CFR, Part 63, Subparts A and EEEEE for Iron and Steel Foundries by the compliance date specified in 40 CFR 63.7683. **(40 CFR Part 63, Subparts A and EEEEE)**

Footnotes:
[1]This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

EUSANDSYSTEM-S1
EMISSION UNIT CONDITIONS

DESCRIPTION

Mold making, shakeout, and sand processing equipment. Emissions from these processes are controlled by a 66,000 dscfm baghouse.

4. CO	44.55 pph[2]	Test Protocol	EU-MP-S1	SC V.2, V.3	**40 CFR 52.21 (j)**

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
NA	NA	NA	NA	NA	NA

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall implement procedures for igniting gases from mold vents in pouring areas and pouring stations that use a sand mold system as specified in the approved operation and maintenance (O&M) plan. These procedures may be waived if the permittee determines that the mold vent gases are not ignitable, ignite automatically, or cannot be ignited due to accessibility or safety issues. The permittee shall document and maintain records of this determination at the facility and make them available to the Department upon request.[2] **(40 CFR 63.7710(b)(6))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate EU-MP-S1 unless the associated capture system and baghouse control system are installed and operating in accordance with the approved operation and maintenance (O&M) plan.[2] **(R 336.1224, R 336.1225, R 336.1910, 40 CFR 52.21(j), 40 CFR Part 63.6 (e)(1)(i), 40 CFR 63.7710)**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall conduct subsequent compliance testing to demonstrate compliance with the applicable PM or Total Metal HAP emission limits, no less frequently than every 5 years. This requirement does not apply if a CEMS is used to demonstrate continuous compliance. No less than 30 days prior to testing, the permittee shall submit a complete test plan to the AQD. The AQD must approve the final plan prior to testing. Verification of emission rates includes the submittal of a complete report of the test results to the AQD within 60 days following the last date of the test.[2] **(40 CFR 63.7731(a))**

2. Within 180 days of permit issuance, the permittee shall verify PM-10, VOC, and CO emission rates from EU-MP-S1 by testing at owner's expense, in accordance with Department requirements. No less than 30 days prior to testing, the permittee shall submit a complete test plan to the AQD. The AQD must approve the final plan prior to testing. Verification of emission rates includes the submittal of a complete report of the test results to the AQD within 60 days following the last date of the test.[2] **(R 336.1205(1)(a) and (b), R 336.2001, R 336.2003, R 336.2004, 40 CFR 52.21(j)**)

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall monitor the relative change in PM loading using a bag leak detection system for the EU-MP-S1 baghouse.[2] **(40 CFR 63.7740(b))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

4. The permittee shall report each instance in which each emission limitation, each work practice standard, and each operation and maintenance requirement was not met, in accordance with the requirements of 40 CFR 63.7751. **(40 CFR 63.7746, 40 CFR 63.7751)**

5. The permittee shall submit applicable notifications specified in 40 CFR 63.6(h)(4) and (5), 40 CFR 63.7(b) and (c), 63.8(e), 63.8(f)(4) through (6), and 63.9(d) through (h) for a notification of intent to conduct a performance test, and a notification of compliance status as specified in 40 CFR 63.7750. **(40 CFR 63.7750)**

6. The permittee shall submit all semiannual compliance reports and semiannual reports of monitoring and deviations from any emissions limitation or operation and maintenance requirement as required by 40 CFR 63.7751(a), (b), and (d). **(40 CFR 63.7751 (a), (b), and (d))**

7. If a startup, shutdown, or malfunction occurs during the semiannual reporting period, that is not consistent with the SSMP, the permittee shall submit an immediate SSM report according to the requirements of 40 CFR 63.10(d)(5)(ii). **(40 CFR 63.10(d)(5)(ii), 40 CFR 63.7751(c))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SV-MP	42[2]	118[2]	**40 CFR 52.21(c) & (d)**

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable provisions of the National Emission Standards for Hazardous Air Pollutants, as specified in 40 CFR, Part 63, Subpart A and Subpart EEEEE for Iron and Steel Foundries by the compliance date. **(40 CFR Part 63, Subparts A and EEEEE)**

Footnotes:
[1]This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

EU-MCS-S1
EMISSION UNIT CONDITIONS

DESCRIPTION

Consists of the automated mold cooling conveyors and automated sand shakeout lines, including a flat deck shakeout system. Emissions from these processes are controlled by associated hoods, enclosures, ductwork, a baghouse, and a regenerative thermal oxidizer. The exhaust gas flow from this unit is approximately 61,200 acfm.

Flexible Group ID: FG-NEWFOUNDRY-S1, FGCAM_UNITS-S1

POLLUTION CONTROL EQUIPMENT

Emissions from these processes are controlled by associated hoods, enclosures, ductwork, a baghouse, and a regenerative thermal oxidizer. The exhaust gas flow from this unit is approximately 61,200 acfm.

III. PROCESS/OPERATIONAL RESTRICTION(S)

NA

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate EU-MCS-S1 unless the associated capture system, regenerative thermal oxidizer (RTO) and baghouse control system are installed, operated and maintained in accordance with the approved operation and maintenance (O&M) plan.[2] **(R 336.1224, R 336.1225, R 336.1910, 40 CFR 52.21(j), 40 CFR 63.6(e)(1)(i), 40 CFR 63.7690(b), 40 CFR 63.7710)**

2. If the permittee installs a CEMS in order to monitor compliance with the VOHAP limit in 40 CFR 63.7690(a), the CEMS and appropriate flow meters shall be installed at a location(s) such that the monitor(s) will provide the VOHAP concentration of the automated pallet (mold) cooling line and automated shakeout lines (as defined in 40 CFR 63.7765) separate from any dilution caused by air flow captured from equipment that is not associated with the automated pallet (mold) cooling line and automated shakeout lines.[2] **(40 CFR 63.7741(g), 40 CFR 63.7690(a)(10), 40 CFR 63.7732(f))**

3. The permittee shall install, calibrate, maintain and operate in a satisfactory manner a temperature monitoring device in the combustion chamber of the RTO to monitor and record the temperature on a continuous basis, during operation of EU-MCS-S1. The proper operation of the RTO is maintaining the combustion temperature at or above the minimum combustion temperature established during the most recent performance test that demonstrates compliance with the VOHAP emission standard in SC I.1. The permittee shall revise the approved O & M plan to include the minimum RTO combustion temperature based on the most recent performance test that demonstrates compliance with the VOHAP emission standard in SC I.1.[2] **(R 336.1205, R 336.1225, R 336.1299, R 336.1702)**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee must conduct subsequent performance tests to demonstrate compliance with the applicable VOHAP emissions limitations in § 63.7690(a)(10) for EU-MCS-S1 no less frequently than every 5 years and each time you elect to change an operating limit or to comply with a different alternative emissions limit, if applicable. The requirement to conduct performance tests every 5 years does not apply to an emissions source for which a continuous emissions monitoring system (CEMS) is used to demonstrate continuous compliance. **(40 CFR 63.7731(a))**

2. Within 180 days of permit issuance, the permittee shall verify PM-10, VOC and CO emission rates from EU-MCS-S1 by testing at owner's expense, in accordance with Department requirements. The permittee shall conduct subsequent compliance testing to demonstrate compliance with all applicable emission limits (PM10, VOC, CO) no less frequently than every 5 years. This requirement does not apply if a CEMS is used to demonstrate continuous compliance.[2] **(40 CFR 63.7731(a), R 336.1213(3))**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall install, operate, and maintain a CEMS in accordance with Appendix 3-S1.[2]

2. The permittee shall monitor at all times the 3-hour average VOHAP concentration using a CEMS according to the requirements of 40 CFR 63.7741(g) when EU-MCS-S1 is operating.[2] **(40 CFR 63.7740(g))**

3. The permittee may request an alternative monitoring method to demonstrate compliance with the VOHAP emission limit according to the procedures in 40 CFR 63.7747.[2] **(40 CFR 63.7747)**

4. The permittee shall monitor and keep records, in a satisfactory manner, of the MCS capture system baghouse fan amperage for the capture system for EU-MCS-S1 as defined in Section 4.2 of the facility MACT Operations and Maintenance Plan. The permittee shall keep all records on file and make them available to the Department upon request.[2] **(R 336.1205, R 336.1225, R 336.1702(a))**

5. The permittee shall install, calibrate, maintain and operate in a satisfactory manner a gauge to monitor and record the pressure drop across the EU-MCS-S1 baghouse on a continuous basis when the EU-MCS-S1 is operating.[2] **(R 336.1205, R 336.1224, R 336.1225, R 336.1301, R 336.1331, R 336.1901, R 336.1910, 40 CFR 52.21(j))**

See Appendix 3-S1

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

4. The permittee shall report each instance in which each emission limitation, each work practice standard, and each operation and maintenance requirement was not met, in accordance with the requirements of 40 CFR 63.7751. **(40 CFR 63.7746, 40 CFR 63.7751)**

5. The permittee shall submit applicable notifications specified in 40 CFR 63.6(h)(4) and (5), 40 CFR 63.7(b) and (c), 63.8(e), 63.8(f)(4) through (6), and 63.9(d) through (h) for a notification of intent to conduct a performance test, and a notification of compliance status as specified in 40 CFR 63.7750. **(40 CFR 63.7750)**

6. The permittee shall submit all semiannual compliance reports and semiannual reports of monitoring and deviations from any emissions limitation or operation and maintenance requirement as required by 40 CFR 63.7751(a), (b), and (d). **(40 CFR 63.7751 (a), (b), and (d))**

7. If a startup, shutdown, or malfunction occurs during the semiannual reporting period, that is not consistent with the SSMP, the permittee shall submit an immediate SSM report according to the requirements of 40 CFR 63.10(d)(5)(ii). **(40 CFR 63.10(d)(5)(ii), 40 CFR 63.7751(c))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SV-MCS	60[2]	118[2]	**40 CFR 52.21(c) & (d)**

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable provisions of the National Emission Standards for Hazardous Air Pollutants, as specified in 40 CFR, Part 63, Subpart A and Subpart EEEEE for Iron and Steel Foundries by the compliance date. **(40 CFR Part 63, Subparts A and EEEEE)**

Footnotes:
[1]This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

EU-SS-S1
EMISSION UNIT CONDITIONS

DESCRIPTION

Consists of the molding machine and related sand handling equipment. Emissions from the mold making process are controlled by associated hoods, enclosures, ductwork, and a 56,900 acfm baghouse.

Flexible Group ID: FG-NEWFOUNDRY-S1, FGCAM_UNITS-S1

POLLUTION CONTROL EQUIPMENT

56,900 acfm baghouse

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. PM-10	2.30 pph[2]	Test Protocol	EU-SS-S1	SC V.1, V.2	**40 CFR 52.21 (j)**

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
NA	NA	NA	NA	NA	NA

III. PROCESS/OPERATIONAL RESTRICTION(S)

NA

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate EU-SS-S1 unless the associated capture system and baghouse control system are installed, operated and maintained in accordance with the approved operation and maintenance (O&M) plan.[2] **(R 336.1224, R 336.1225, R 336.1910, 40 CFR 52.21(j))**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. Within 180 days of permit issuance, the permittee shall verify PM-10, and VOC emission rates from EU-SS-S1 by testing at owner's expense, in accordance with Department requirements. No less than 30 days prior to testing, the permittee shall submit a complete test plan to the AQD. The AQD must approve the final plan prior to testing. Verification of emission rates includes the submittal of a complete report of the test results to the AQD within 60 days following the last date of the test.[2] **(R 336.1205(1)(a) and (b), R 336.2001, R 336.2003, R 336.2004, 40 CFR 52.21(j))**

2. The permittee shall conduct subsequent compliance testing to demonstrate compliance with all applicable emission limits, no less frequently than every 5 years. This requirement does not apply if a CEMS is used to demonstrate continuous compliance.[2] **(R 336.2001, R 336.2003, R 336.2004, R 336.1213(3))**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall install, calibrate, maintain and operate in a satisfactory manner a gauge to monitor and record the pressure drop across the EU-SS-S1 baghouse on a continuous basis when the baghouse is operating.[2] **(R 336.1205, R 336.1224, R 336.1225, R 336.1301, R 336.1331, R 336.1901, R 336.1910, 40 CFR 52.21(j))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SV-SS(NEW)	52[2]	118[2]	**40 CFR 52.21(c) & (d)**

IX. OTHER REQUIREMENT(S)

NA

Footnotes:
[1]This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

EU-CCFBACK-S1
EMISSION UNIT CONDITIONS

DESCRIPTION

Consists of the back section of casting cooling conveyors and a shot blast machine. Emissions from this emission unit are controlled by associated hoods, enclosures, ductwork, and a 65,360 acfm baghouse.

Flexible Group ID: FG-NEWFOUNDRY-S1, FGCAM_UNITS-S1

POLLUTION CONTROL EQUIPMENT

The CCF2 baghouse – approximate flow of 65,360 acfm

[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

EU-EMERGEN1-S1
EMISSION UNIT CONDITIONS

DESCRIPTION

Diesel fired emergency power generator for the new foundry.

Flexible Group ID: NA

POLLUTION CONTROL EQUIPMENT

NA

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. HC	1.0 g/HP-hr	Test Protocol	EU-EMERGEN1-S1	SC V.1 or VI.2	**40 CFR 60.4205**
2. NOx	6.9 g/HP-hr	Test Protocol	EU-EMERGEN1-S1	SC V.1 or VI.2	**40 CFR 60.4205**
3. CO	8.5 g/HP-hr	Test Protocol	EU-EMERGEN1-S1	SC V.1 or VI.2	**40 CFR 60.4205**
4. PM	0.40 g/HP-hr	Test Protocol	EU-EMERGEN1-S1	SC V.1 or VI.2	**40 CFR 60.4205**

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Diesel Fuel	Sulfur content shall not exceed 15 ppm	Instantaneous	EU-EMERGEN1-S1	SC VI.3	**40 CFR 60.4207(b), 40 CFR 80.510(b)**

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall operate EU-EMERGEN1-S1 in compliance with the emission limitations and operating limitations in this subpart. EU-EMERGEN1-S1 must be operated and maintained at any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. **(40 CFR 63.6605, 40 CFR 60.4206)**

2. The permittee shall maintain and operate EU-EMERGEN1-S1 per the manufacturer's emission related written instructions or develop a maintenance plan which must provide for the maintenance and operation of the engine in a manner consistent with good air pollution control practices for minimizing emissions. **(40 CFR 63.6640(a), 40 CFR 60.4211(a)(1))**

3. The permittee is not limited on hours of operation of EU-EMERGEN1-S1 during emergency situations. **(40 CFR 63.6640(f)(1)(i))**

4. The permittee shall not exceed 100 hours per year for maintenance checks and readiness testing. The permittee may petition the Administrator for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per year. **(40 CFR 63.6640(f)(1)(ii))**

5. The permittee may operate EU-EMERGEN1-S1 up to 50 hours per year in non-emergency situations, but those 50 hours are counted towards the 100 hours per year provided for maintenance and testing, as allowed in 40 CFR 63.6640(f)(1)(iii). **(40 CFR 63.6640(f)(1)(iii))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate EU-EMERGEN1-S1 unless a non-resettable hour meter to track the number of operational hours is installed and operating properly. **(R 336.1213(3), 40 CFR 60.4211(a))**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. Within 180 days after issuance of this permit, the permittee shall verify HC, NOx, CO, and PM emission rates from EU-EMERGEN1-S1, by testing at owner's expense, in accordance with Department requirements or by providing manufacturer's certification documentation as required in SC VI.2. If testing is to be performed, the permittee must submit a complete stack-testing plan to the AQD. No less than 60 days prior to testing, the permittee must submit a complete stack-testing plan to the AQD. The AQD must approve the final plan prior to testing. Verification of emission rates includes the submittal of a complete report of the test results to the AQD within 60 days following the last date of the test. **(R 336.2001, R 336.2003, R 336.2004, 40 CFR 60.4211)**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall keep in a satisfactory manner, records of hours of operation recorded through the non-resettable hour meter. The permittee shall document how many hours were spent during emergency operation, non-emergency operation and demand response operation. The permittee shall keep all records on file and make them available to the department upon request. **(R 336.1213(3), 40 CFR 60.4214(b))**

2. The permittee shall keep, in a satisfactory manner, a record of testing required in SC V.1 or manufacturer's certification documentation indicating that EU-EMERGEN1-S1 meets the applicable emission limitations contained in the federal Standards of Performance for New Stationary Sources 40 CFR Part 60 Subpart IIII. The permittee shall keep all records on file and make them available to the Department upon request. **(40 CFR 60.4211)**

3. The permittee shall keep, in a satisfactory manner, fuel supplier certification records or fuel sample test data, for each delivery of diesel fuel oil used in EU-EMERGEN1-S1, demonstrating that the fuel sulfur content meets the requirement of 40 CFR 80.510(b). The certification or test data shall include the name of the oil supplier or laboratory, and the sulfur content of the fuel oil. **(40 CFR 60.4207(a), 40 CFR 80.510(b))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SVEMERGEN1	NA	NA	NA

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable provisions of the federal Standards of Performance for New Stationary Sources as set forth in 40 CFR Part 60 Subpart A and Subpart IIII. **(40 CFR Part 60 Subpart A and Subpart IIII)**

Footnotes:
[1] This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2] This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

EU-EMERGEN2-S1
EMISSION UNIT CONDITIONS

DESCRIPTION

Natural gas fired emergency power generator for the existing foundry.

Flexible Group ID: NA

POLLUTION CONTROL EQUIPMENT

NA

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
NA	NA	NA	NA	NA	NA

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
NA	NA	NA	NA	NA	NA

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The EU-EMERGEN2-S1 shall be installed, maintained, and operated in a satisfactory manner. A list of recommended work practice standards as specified in 40 CFR 63.6602 and Table 2c, Item 1 or the permittee may petition the Administrator pursuant to the requirements of 40 CFR 63.6(g) for alternative work practices. The following are the recommended work practices specified in 40 CFR Part 63, Subpart ZZZZ, Table 2c:
   a. Change oil and filter every 500 hours of operation or annually, whichever comes first, except as allowed in Condition III.3; and
   b. Inspect the spark plugs every 1,000 hours of operation or annually, whichever comes first; and
   c. Inspect all hoses and belts every 500 hours of operation or annually, whichever comes first, and replace as necessary.

   If EU-EMERGEN2-S1 is being operated during an emergency and it is not possible to shut down the engine to perform the work practice standards on the schedule required the work practice standard can be delayed until the emergency is over. The work practice should be performed as soon as practicable after the emergency has ended or the unacceptable risk under Federal, State or local law has been abated. Sources must report any failure to perform the work practice on the schedule required and the Federal, State or local law or which the risk was deemed unacceptable. **(40 CFR 63.6602, 40 CFR Part 63, Subpart ZZZZ, Table 2c, Item 1)**

2. The permittee shall operate EU-EMERGEN2-S1 in compliance with the emission limitations and operating limitations in this subpart. EU-EMERGEN2-S1 must be operated and maintained at any affected source, including associated air pollution control equipment and monitoring equipment, in a manner consistent with safety and good air pollution control practices for minimizing emissions. **(40 CFR 63.6605)**

3. The permittee may utilize an oil analysis program in order to extend the specified oil change requirement. The oil analysis must be performed at the same frequency as oil changes are required. The oil analysis program must analyze the parameters and keep records as required in 40 CFR 63.6625(j). **(40 CFR 63.6625(j))**

4. The permittee shall maintain and operate EU-EMERGEN2-S1 per the manufacturer's emission related written instructions or develop a maintenance plan which must provide for the maintenance and operation of the engine in a manner consistent with good air pollution control practices for minimizing emissions. **(40 CFR 63.6625(e), 40 CFR 63.6640(a), 40 CFR Part 63, Subpart ZZZZ, Table 6, Item 9)**

5. The permittee shall minimize the time spent at idle during startup and minimize the startup time of EU-EMERGEN2-S1 to a period needed for appropriate and safe loading of the engine, not to exceed 30 minutes, after which time the emission standards applicable to all times other than startup apply. **(40 CFR 63.6625(h))**

6. The permittee is not limited on hours of operation of EU-EMERGEN2-S1 during emergency situations. **(40 CFR 63.6640(f)(i))**

7. The permittee shall not exceed 100 hours per year for maintenance checks and readiness testing. The permittee may petition the Administrator for approval of additional hours to be used for maintenance checks and readiness testing, but a petition is not required if the owner or operator maintains records indicating that Federal, State, or local standards require maintenance and testing of emergency RICE beyond 100 hours per year. **(40 CFR 63.6640(f)(ii))**

8. The permittee may operate EU-EMERGEN2-S1 up to 50 hours per year in non-emergency situations, but those 50 hours are counted towards the 100 hours per year provided for maintenance and testing, as allowed in 40 CFR 63.6640(f)(iii). **(40 CFR 63.6640(f)(iii))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate EU-EMERGEN2-S1 unless a non-resettable hour meter to track the number of operational hours is installed and operating properly. **(40 CFR 63.6625(f))**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee has the option of utilizing an oil analysis program in order to extend the specified oil change requirement in Table 2c of this subpart. If this option is utilized, the oil analysis must be performed at the same frequency specified for changing the oil listed in Table 2c. The analysis program must at a minimum analyze the following three parameters: Total Acid Number, viscosity, and percent water content. The condemning limits for these parameters are as follows: Total Acid Number increases by more than 3.0 milligrams of potassium hydroxide (KOH) per gram from Total Acid Number of the oil when new; viscosity of the oil has changed by more than 20 percent from the viscosity of the oil when new; or percent water content (by volume) is greater than 0.5. If all of these condemning limits are not exceeded, the permittee is not required to change the oil. If any of the limits are exceeded, the permittee must change the oil within 2 days of receiving the results of the analysis; if the engine is not in operation when the results of the analysis are received, the permittee must change the oil within 2 days or before commencing operation, whichever is later. The permittee must keep records of the parameters that are analyzed as part of the program, the results of the analysis, and the oil changes for the engine. The analysis program must be part of the maintenance plan for the engine. **(40 CFR 63.6625(j))**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall keep in a satisfactory manner, records of the occurrence and duration of each malfunction of operation or the air pollution control monitoring equipment. The permittee shall keep all records on file and make them available to the department upon request. **(40 CFR 63.6655(a)(2), 40 CFR 63.6660)**

2. The permittee shall keep in a satisfactory manner, records of actions taken during periods of malfunction to minimize emissions, including corrective actions to restore malfunctioning process and air pollution control and monitoring equipment to its normal or usual manner of operation. The permittee shall keep all records on file and make them available to the department upon request. **(40 CFR 63.6655(a)(5), 40 CFR 63.6660)**

3. The permittee shall keep in a satisfactory manner, records to demonstrate continuous compliance with operating limitations in SC III.1. The permittee shall keep all records on file and make them available to the department upon request. **(40 CFR 63.6655(d), 40 CFR 63.6660)**

4. The permittee shall keep in a satisfactory manner, records of the maintenance conducted to demonstrate the engine and after-treatment control device (if any) were operated and maintained according to the developed maintenance plan. The permittee shall keep all records on file and make them available to the department upon request. **(40 CFR 63.6655(e), 40 CFR 63.6660)**

5. The permittee shall keep in a satisfactory manner, records of hours of operation recorded through the non-resettable hour meter. The permittee shall document how many hours were spent during emergency operation and how many hours were spent during non-emergency operation. If the engines were used for demand response operation, the permittee shall keep records of the notification of the emergency situation and the time the engine was operated as part of demand response. The permittee shall keep all records on file and make them available to the department upon request. **(40 CFR 63.6655(f), 40 CFR 63.6660)**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SVEMERGEN2	NA	NA	NA

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable requirements of the federal National Emission Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines as set forth in 40 CFR Part 63, Subparts A and ZZZZ. **(40 CFR Part 63, Subparts A and ZZZZ)**

Footnotes:
[1] This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2] This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

D. FLEXIBLE GROUP CONDITIONS

Part D outlines the terms and conditions that apply to more than one emission unit. The permittee is subject to the special conditions for each flexible group in addition to the General Conditions in Part A and any other terms and conditions contained in this ROP.

The permittee shall comply with all specific details in the special conditions and the underlying applicable requirements cited. If a specific condition type does not apply, NA (not applicable) has been used in the table. If there are no special conditions that apply to more than one emission unit, this section will be left blank.

FLEXIBLE GROUP SUMMARY TABLE

The descriptions provided below are for informational purposes and do not constitute enforceable conditions.

Flexible Group ID	Flexible Group Description	Associated Emission Unit IDs
FGFOUNDRY-S1-S1	Flexible group that includes two emissions units.	EUMPCC-S1 EUSANDSYSTEM-S1
FG-COLDCLEANERS-S1	Any cold cleaner that is grandfathered or exempt from Rule 201, pursuant to Rule 281(h) or Rule 285(r)(iv). Existing cold cleaners were placed into operation prior to July 1, 1979. New cold cleaners were placed into operation on or after July 1, 1979.	EUCOLDCLEANER-S1
FG-RULE290-S1	Any emission unit that emits air contaminants and is exempt from the requirements of Rule 201, pursuant to Rules 278 and 290.	EUCONVEYOR-S1
FGCAM_UNITS-S1	The equipment in this flexible group is subject to Compliance Assurance Monitoring, 40 CFR 64.6.	EUMPCC-S1 EUSANDSYSTEM-S1 EU-MCS-S1 EU-SS-S1 EU-CCFBACK-S1
FG-NEWFOUNDRY-S1	All emission units of the new expansion foundry.	EU-MP-S1 EU-MCS-S1 EU-SS-S1 EU-CCFBACK-S1
FG-COATING-S1	Three GEOMET paint line systems each consisting of a mixing room, a paint spray booth equipped with HVLP applications and dry filter overspray control, and an induction cure process consisting of pre-curing and final cure steps for coating of metallic surfaces.	EULine1-S1 EULine2-S1 EULine3-S1
FG-SOURCE-S1	All metallic surface coating lines and all associated purge and cleanup operations at the stationary source. This includes any metallic surface coating line covered by this or any other general permit or any permit to install issued pursuant to Rule 201, and any metallic surface coating line exempt from the requirement to obtain a PTI pursuant to Rule 287 and/or Rule 290.	NA

Flexible Group ID	Flexible Group Description	Associated Emission Unit IDs
FG-MACT MMMM-S1	Each new, reconstructed, and existing affected source described in 40 CFR 63.3881(a)(1), including the subcategories listed in 40 CFR, Part 63, Subpart MMMM, 40 CFR 63.3881(a)(2) through (6), meeting the applicability requirements of 40 CFR 63.3881(b), which is engaged in the surface coating of miscellaneous metal parts and products. The affected source includes the collection of all the items listed in 40 CFR 63.3882(b)(1) through (4). Surface coating is defined by 40 CFR 63.3881, as the application of coating to a substrate using, for example, spray guns or dip tanks. Surface coating also includes associated activities, such as surface preparation, cleaning, mixing, and storage if they are directly related to the application of the coating. The 40 CFR, Part 63, Subpart MMMM, does not apply to surface coating or a coating operation that meets any of the criteria of 40 CFR 63.3881(c)(1) through (17).	EULine1-S1 EULine2-S1 EULine3-S1

FGFOUNDRY-S1
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

Flexible group that includes two emission units.

Emission Units: EUMPCC-S1, EUSANDSYSTEM-S1

POLLUTION CONTROL EQUIPMENT

NA

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Particulate Matter	19.4 tons per year[2]	12-month rolling time period	EUMPCC-S1, EUSANDSYSTEM-S1	SC VI.2	**R 336.1205(3)**
2. Carbon Monoxide	156.0 tons per year[2]	12-month rolling time period	EUMPCC-S1, EUSANDSYSTEM-S1	SC VI.2	**R 336.1205(3)**
3. Volatile Organic Compounds	38.4 tons per year[2]	12-month rolling time period	EUMPCC-S1, EUSANDSYSTEM-S1	SC VI.2	**R 336.1205(3), R 336.1702(a)**

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Metal	Metal melt rate shall not exceed 48,000 tons per year.[2]	Based on a 12-month rolling time period as determined at the end of each calendar month.	EUMPCC-S1, EUSANDSYSTEM-S1	SC VI.1	**R 336.1205(1) and (3), R 336.1225, R 336.1702(a)**

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall not operate FGFOUNDRY-S1 for more than 7,872 hours per 12-month rolling time period as determined at the end of each calendar month.[2] **(R 336.1205(1)(a) and (3), R 336.1225, R 336.1702(a))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

NA

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

NA

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall monitor in a satisfactory manner the metal melt rate and hours of operation for FGFOUNDRY-S1 on a monthly basis.[2] **(R 336.1205(1)(a) and (3), R 336.1225, R 336.1702(a))**

2. The permittee shall keep the following information on a monthly basis for FGFOUNDRY-S1:
   a. Tons of metal processed.
   b. Hours of operation.
   c. Monthly and previous 12-month PM, CO, and VOC emission rates, calculated as follows. Monthly PM emissions from each baghouse shall be calculated by multiplying the PM emission rate (in pph) measured during the most recent stack test with the monthly operation hours. The sum of PM emissions from both baghouses divided by 2000 will determine the monthly total PM emissions in tons per month. This monthly PM emission rate will be added to the preceding 11-month total PM emission rate to determine a 12-month rolling emission rate (in tpy).

      Monthly CO and VOC emission rates shall be calculated using the following emission factors:

      EUMPCC-S1:
      5.75 lb CO/ton of melt
      1.00 lb VOC/ton of melt

      EUSANDSYSTEM-S1:
      0.75 lb CO/ton of melt
      0.60 lb VOC/ton of melt

      Monthly melt rates shall be multiplied with the appropriate factors from above to determine the monthly CO and VOC mass emissions from each baghouse. The sum of CO and the sum of VOC emissions from both baghouses divided by 2000 will determine the monthly total CO and VOC emissions in tons per month, respectively. These monthly emission rates will be added to the previous 11-month total emission rates of each CO and VOC to determine 12-month rolling emission rates in tons per year for CO and VOC. [Note: Alternate CO and VOC emission factors may be used upon prior approval from the District Supervisor].[2] **(R 336.1205(1) and (3), R 336.1225, R 336.1702(a))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
NA	NA	NA	NA

IX. OTHER REQUIREMENT(S)

NA

Footnotes:
[1]This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

FG-COLDCLEANERS-S1
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

Any cold cleaner that is grandfathered or exempt from Rule 201 pursuant to Rule 278 and Rule 281(h), or Rule 285(r)(iv). Existing cold cleaners were placed into operation prior to July 1, 1979. New cold cleaners were placed into operation on or after July 1, 1979.

Emission Unit: EUCOLDCLEANER-S1

POLLUTION CONTROL EQUIPMENT

NA

I. EMISSION LIMIT(S)

NA

II. MATERIAL LIMIT(S)

1. The permittee shall not use cleaning solvents containing more than five percent by weight of the following halogenated compounds: methylene chloride, perchloroethylene, trichloroethylene, 1,1,1-trichloroethane, carbon tetrachloride, chloroform, or any combination thereof. **(R 336.1213(2))**

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. Cleaned parts shall be drained for no less than 15 seconds or until dripping ceases. **(R 336.1611(2)(b), R 336.1707(3)(b))**

2. The permittee shall perform routine maintenance on each cold cleaner as recommended by the manufacturer. **(R 336.1213(3))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The cold cleaner must meet one of the following design requirements:
   a. The air/vapor interface of the cold cleaner is no more than ten square feet. **(R 336.1281(h))**
   b. The cold cleaner is used for cleaning metal parts and the emissions are released to the general in-plant environment. **(R 336.1285(r)(iv))**

2. The cold cleaner shall be equipped with a device for draining cleaned parts. **(R 336.1611(2)(b), R 336.1707(3)(b))**

3. All new and existing cold cleaners shall be equipped with a cover and the cover shall be closed whenever parts are not being handled in the cold cleaner. **(R 336.1611(2)(a), R 336.1707(3)(a))**

4. The cover of a new cold cleaner shall be mechanically assisted if the Reid vapor pressure of the solvent is more than 0.3 psia or if the solvent is agitated or heated. **(R 336.1707(3)(a))**

5. If the Reid vapor pressure of any solvent used in a new cold cleaner is greater than 0.6 psia; or, if any solvent used in a new cold cleaner is heated above 120 degrees fahrenheit, then the cold cleaner must comply with at least one of the following provisions:
   a. The cold cleaner must be designed such that the ratio of the freeboard height to the width of the cleaner is equal to or greater than 0.7. **(R 336.1707(2)(a))**

b. The solvent bath must be covered with water if the solvent is insoluble and has a specific gravity of more than 1.0. **(R 336.1707(2)(b))**
c. The cold cleaner must be controlled by a carbon adsorption system, condensation system, or other method of equivalent control approved by the AQD. **(R 336.1707(2)(c))**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

NA

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. For each new cold cleaner in which the solvent is heated, the solvent temperature shall be monitored and recorded at least once each calendar week during routine operating conditions. **(R 336.1213(3))**

2. The permittee shall maintain the following information on file for each cold cleaner **(R 336.1213(3))**:
   a. A serial number, model number, or other unique identifier for each cold cleaner.
   b. The date the unit was installed, manufactured or that it commenced operation.
   c. The air/vapor interface area for any unit claimed to be exempt under Rule 281(h).
   d. The applicable Rule 201 exemption.
   e. The Reid vapor pressure of each solvent used.
   f. If applicable, the option chosen to comply with Rule 707(2).

3. The permittee shall maintain written operating procedures for each cold cleaner. These written procedures shall be posted in an accessible, conspicuous location near each cold cleaner. **(R 336.1611(3), R 336.1707(4))**

4. As noted in Rule 611(2)(c) and Rule 707(3)(c), if applicable, an initial demonstration that the waste solvent is a safety hazard shall be made prior to storage in non-closed containers. If the waste solvent is a safety hazard and is stored in non-closed containers, verification that the waste solvent is disposed of so that not more than 20 percent, by weight, is allowed to evaporate into the atmosphere shall be made on a monthly basis. **(R 336.1213(3), R 336.1611(2)(c), R 336.1707(3)(c))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

NA

IX. OTHER REQUIREMENT(S)

NA

FG-RULE 290-S1
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

Any emission unit that emits air contaminants and is exempt from the requirements of Rule 201, pursuant to Rules 278 and 290.

Emission Unit: EUCONVEYOR-S1

POLLUTION CONTROL EQUIPMENT

Baghouse

I. EMISSION LIMIT(S)

1. Each emission unit that emits only noncarcinogenic volatile organic compounds or noncarcinogenic materials which are listed in Rule 122(f) as not contributing appreciably to the formation of ozone if the total uncontrolled or controlled emissions of air contaminants are not more than 1,000 or 500 pounds per month, respectively. **(R 336.1290(a)(i))**

2. Each emission unit that the total uncontrolled or controlled emissions of air contaminants are not more than 1,000 or 500 pounds per month, respectively, and all the following criteria listed below are met **(R 336.1290(a)(ii))**:
   a. For noncarcinogenic air contaminants, excluding noncarcinogenic volatile organic compounds and noncarcinogenic materials which are listed in Rule 122(f) as not contributing appreciably to the formation of ozone, with initial threshold screening levels greater than or equal to 2.0 micrograms per cubic meter, the uncontrolled or controlled emissions shall not exceed 1,000 or 500 pounds per month, respectively. **(R 336.1290(a)(ii)(A))**
   b. For noncarcinogenic air contaminants, excluding noncarcinogenic volatile organic compounds and noncarcinogenic materials which are listed in Rule 122(f) as not contributing appreciably to the formation of ozone, with initial threshold screening levels greater than or equal to 0.04 microgram per cubic meter and less than 2.0 micrograms per cubic meter, the uncontrolled or controlled emissions shall not exceed 20 or 10 pounds per month, respectively. **(R 336.1290(a)(ii)(B))**
   c. For carcinogenic air contaminants with initial risk screening levels greater than or equal to 0.04 microgram per cubic meter, the uncontrolled or controlled emissions shall not exceed 20 or 10 pounds per month, respectively. **(R 336.1290(a)(ii)(C))**
   d. The emission unit shall not emit any air contaminants, excluding non-carcinogenic volatile organic compounds and noncarcinogenic materials which are listed in Rule 122(f) as not contributing appreciably to the formation of ozone, with an initial threshold screening level or initial risk screening level less than 0.04 microgram per cubic meter. **(R 336.1290(a)(ii)(D))**

3. Each emission unit that emits only noncarcinogenic particulate air contaminants and other air contaminants that are exempted under Rule 290(a)(i) and/or Rule 290(a)(ii), if all of the following provisions are met **(R 336.1290(a)(iii))**:
   a. The particulate emissions are controlled by an appropriately designed and operated fabric filter collector or an equivalent control system which is designed to control particulate matter to a concentration of less than or equal to 0.01 pound of particulate per 1,000 pounds of exhaust gases and which does not have an exhaust gas flow rate more than 30,000 actual cubic feet per minute. **(R 336.1290(a)(iii)(A))**
   b. The visible emissions from the emission unit are not more than five percent opacity in accordance with the methods contained in Rule 303. **(R 336.1290(a)(iii)(B))**
   c. The initial threshold screening level for each particulate air contaminant, excluding nuisance particulate, is more than 2.0 micrograms per cubic meter. **(R 336.1290(a)(iii)(C))**

II. MATERIAL LIMIT(S)

NA

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The provisions of Rule 290 apply to each emission unit that is operating pursuant to Rule 290. **(R 336.1290)**

IV. DESIGN/EQUIPMENT PARAMETER(S)

NA

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

NA

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall maintain records of the following information for each emission unit for each calendar month using the methods outlined in the DEQ, AQD Rule 290, Permit to Install Exemption Record form (EQP 3558) or an alternative format that is approved by the AQD District Supervisor **(R 336.1213(3))**:
   a. Records identifying each air contaminant that is emitted. **(R 336.1213(3))**
   b. Records identifying if each air contaminant is controlled or uncontrolled. **(R 336.1213(3))**
   c. Records identifying if each air contaminant is either carcinogenic or non-carcinogenic. **(R 336.1213(3))**
   d. Records identifying the ITSL and IRSL, if established, of each air contaminant that is being emitted under the provisions of Rules 290(a)(ii) and (iii). **(R 336.1213(3))**
   e. Material use and calculations identifying the quality, nature, and quantity of the air contaminant emissions in sufficient detail to demonstrate that the actual emissions of the emission unit meet the emission limits outlined in this table and Rule 290. **(R 336.1213(3), R 336.1290(c))**

2. The permittee shall maintain an inventory of each emission unit that is exempt pursuant to Rule 290. This inventory shall include the following information **(R 336.1213(3))**:
   a. The permittee shall maintain a written description of each emission unit as it is maintained and operated throughout the life of the emission unit. **(R 336.1290(b), R 336.1213(3))**
   b. For each emission unit that emits noncarcinogenic particulate air contaminants pursuant to Rule 290(a)(iii), the permittee shall maintain a written description of the control device, including the designed control efficiency and the designed exhaust gas flow rate**. (R 336.1213(3))**

3. For each emission unit that emits noncarcinogenic particulate air contaminants pursuant to Rule 290(a)(iii), the permittee shall perform a monthly visible emission observation of each stack or vent during routine operating conditions. This observation need not be performed using Method 9. The permittee shall keep a written record of the results of each observation. **(R 336.1213(3))**

See Appendix 4-S1

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8-S1

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
NA	NA	NA	NA	NA	NA

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. If visible emissions are observed, the permittee shall initiate corrective action, beginning with an evaluation of the occurrence to determine the action necessary to correct the situation. **(40 CFR 64.7(d), 40 CFR 64.6(c))**

2. The permittee shall operate the baghouse's differential pressure in accordance with the CAM plan. If an excursion occurs outside of this range, the permittee shall initiate corrective action. **(40 CFR 64.7(d), 40 CFR 64.6(c))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

NA

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

NA

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall measure the pressure drop and take a daily reading as an indicator of proper operation of the dust collector for EU-SS-S1, EU-CCFBACK-S1, EU-MCS-S1. **(40 CFR 64.6(c)(1)(i and ii))**

2. The permittee shall perform a daily noncertified visual opacity observation as an indicator of proper operation of the dust collector for EUSANDSYSTEM-S1. **(40 CFR 64.6(c)(1)(i and ii))**

3. The permittee shall monitor the bag leak detection system on a continuous basis as an indicator of proper operation of the dust collector for EU-MCS-S1. **(40 CFR 64.6(c)(1)(i and ii))**

   An excursion is a departure from the indicator range listed in the facility's CAM plan. **(40 CFR 64.6(c)(2))**

4. Upon detecting an excursion or exceedance, the owner or operator shall restore operation of the pollutant-specific emissions unit (including the control device and associated capture system) to its normal or usual manner of operation as expeditiously as practicable in accordance with good air pollution control practices for minimizing emissions. The response shall include minimizing the period of any startup, shutdown or malfunction and taking any necessary corrective actions to restore normal operation and prevent the likely recurrence of the cause of an excursion or exceedance (other than those caused by excused startup or shutdown conditions). **(40 CFR 64.7(d))**

5. Except for, as applicable, monitoring malfunctions, associated repairs, and required quality assurance or control activities (including, as applicable, calibration checks and required zero and span adjustments), the owner or operator shall conduct all monitoring in continuous operation (or shall collect data at all required intervals) at all times that the pollutant-specific emissions unit is operating. Data recorded during monitoring malfunctions, associated repairs, and required quality assurance or control activities shall not be used for purposes of this part, including data averages and calculations or fulfilling a minimum data availability requirement, if applicable. The owner or operator shall use all the data collected during all other periods in assessing the operation of the control device and associated control system. A monitoring malfunction is any sudden, in frequent, not reasonably preventable failure of the monitoring to provide valid data. Monitoring failures that are caused in part by poor maintenance or careless operation are not malfunctions. **(40 CFR 64.6(c)(3), 64.7(c))**

6. The permittee shall properly maintain the monitoring system, including keeping necessary parts for routine repair of the monitoring equipment. **(40 CFR 64.7(b))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

4. Each semiannual report of monitoring and deviations shall include summary information on the number, duration and cause of excursions and/or exceedances and the corrective actions taken. If there were no excursions and/or exceedances in the reporting period, then this report shall include a statement that there were no excursions and/or exceedances. **(40 CFR 64.9(a)(2)(i))**

5. Each semiannual report of monitoring and deviations shall include summary information on monitor downtime. If there were no periods of monitor downtime in the reporting period, then this report shall include a statement that there were no periods of monitor downtime. **(40 CFR 64.9(a)(2)(ii))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
NA	NA	NA	NA

IX. OTHER REQUIREMENTS

1. The permittee shall comply with all applicable requirements of 40 CFR Part 64. **(40 CFR Part 64)**

2. If the permittee identifies a failure to achieve compliance with an emission limitation or standard for which the approved monitoring did not provide an indication of an excursion or exceedance while providing valid data, or the results of compliance or performance testing document a need to modify the existing indicator ranges or designated conditions, the permittee shall promptly notify the AQD and, if necessary, submit a proposed modification to the CAM Plan to address the necessary monitoring changes. Such a modification may include, but is not limited to, reestablishing indicator ranges or designated conditions, modifying the frequency of conducting monitoring and collecting data, or the monitoring of additional parameters. **(40 CFR 64.7(e))**

FG-NEWFOUNDRY-S1
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

All emission units of the new expansion foundry.

Emission Units: EU-MP-S1, EU-MCS-S1, EU-SS-S1, EU-CCFBACK-S1

POLLUTION CONTROL EQUIPMENT

Baghouses

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Opacity	20% 6-min average, except for one 6-min average per hour that does not exceed 27%[2]	Test Protocol	Buildings or Structures Housing Emission Source at FG-NEWFOUNDRY-S1	SC III.1, III.2, III.3, V.I, VI.1 - VI.7	**40 CFR 63.7690(a)(7)**
2. PM-10	27.0 tpy[2]	12-Month Rolling Time Period	FG-NEWFOUNDRY-S1	SC VI.8	**40 CFR 52.21 (j)**
3. CO	375.5 tpy[2]	12-Month Rolling Time Period	FG-NEWFOUNDRY	SC VI.8	**40 CFR 52.21 (j)**
4. VOC	86.6 tpy[2]	12-Month Rolling Time Period	FG-NEWFOUNDRY-S1	SC VI.8	**40 CFR 52.21 (j)**

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Metal	115,500 tons per year[2]	12-month rolling time period	FG-NEWFOUNDRY-S1	SC VI.8	**40 CFR 52.21 (j)**

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall maintain, in a format acceptable to the AQD District Supervisor, an operation and maintenance (O&M) plan for each capture and collection system and control device for an emission unit or flexible group subject to an emission limit as described in 40 CFR 63.7710. The plan shall include, but is not limited to, the following:
   a. Monthly inspections of the equipment that is important to the performance of the total capture system. **(40 CFR 63.7710(b)(1))**
   b. Operating limits for each capture system for an emission unit subject to a limit for VOHAP. **(40 CFR 63.7710(b)(2))**
   c. Preventative maintenance plan for each control device, including a schedule. **(40 CFR 63.7710(b)(3))**
   d. A site-specific monitoring plan for each bag leak detection system. **(40 CFR 63.7710(b)(4))**
   e. Corrective action plan for each baghouse. **(40 CFR 63.7710(b)(5))**
   f. Procedures for igniting gases from mold vents unless it is determined that the mold vent gases are not ignitable, ignite automatically, or cannot be ignited due to accessibility or safety issues. **(40 CFR 63.7710(b)(6))**

The permittee shall maintain and implement the approved O&M plan at all times.[2] **(40 CFR 63.7710, 40 CFR 63.7745)**

2. The permittee shall comply with the emission limits, work practice standards, and operation and maintenance requirements at all times, except during periods of startup, shutdown, or malfunction.[2] **(40 CFR 63.7720(a))**

3. The permittee shall develop and implement a written startup, shutdown and malfunction plan (SSMP) in accordance with 40 CFR 63.6(e)(3). This plan must address the startup, shutdown and corrective actions in the event of a malfunction of the emission capture system or the add-on control device. The permittee shall operate in accordance with the SSMP when applicable.[2] **(40 CFR 63.7720(c), 40 CFR 63.6(e)(3))**

4. For each segregated scrap storage area, bin or pile, the permittee shall prepare and operate at all times according to a written certification that the facility purchases and uses only charge material that does not include post-consumer automotive body scrap, post-consumer engine blocks, post-consumer oil filters, oily turnings, lead components, mercury switches, plastics or free organic liquids as specified in 40 CFR 63.7700 (b) –OR– the permittee shall prepare and operate according to an approved written plan for the selection and inspection of iron and steel scrap as specified in 40 CFR 63.7700(c).[2] **(40 CFR 63.7700(a), 40 CFR 63.7700(b), 40 CFR 63.7700(c))**

5. For each capture system subject to the VOHAP limit, the permittee shall establish site-specific operating limits in the O&M plans according to the procedures specified in 40 CFR 63.7733 (a).[2] **(40 CFR 63.7733 (a))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

NA

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. Subsequent performance testing to demonstrate compliance with the opacity limit in 40 CFR 63.7690(a)(7) shall be conducted no less frequently than every 6 months. **(40 CFR 63.7730(a), 40 CFR 63.7731(b))**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. During the period between the compliance date specified for FG-NEWFOUNDRY-S1 and the date when operating limits have been established during the performance test, the permittee shall maintain a log detailing the operation and maintenance of the process and control equipment.[2] **(40 CFR 63.7720(b))**

2. The permittee shall keep all records specified in 40 CFR 63.7752(a)(1) through (4), records for each CEMS as specified in 40 CFR 63.7752(b)(1) through (4) and records required by 40 CFR 63.7743, 40 CFR 63.7744, and 40 CFR 63.7745, as applicable.[2] **(40 CFR 63.7752)**

3. For the EU-MP-S1 baghouse that is applied to meet any PM or Total Metal HAP emission limit, the permittee shall install, operate, and maintain a bag leak detection system according to the requirements in 40 CFR 63.7741(b) and conduct inspections according to the requirements specified in 40 CFR 63.7740(b)(1) through (8).[2] **(40 CFR 63.7740(b), 40 CFR 63.7741(b))**

4. For each emission unit in FG-NEWFOUNDRY-S1, the permittee shall demonstrate initial compliance with the work practice standards and the operation and maintenance requirements as specified in 40 CFR 63.7735 and 40 CFR 63.7736.[2] **(40 CFR 63.7735, 40 CFR 63.7736)**

5. The permittee shall monitor and collect data to demonstrate continuous compliance in accordance with 40 CFR 63.7742.[2] **(40 CFR 63.7742)**

6. The permittee shall demonstrate continuous compliance with all applicable emission limitations in accordance with 40 CFR 63.7743.[2] **(40 CFR 63.7743)**

7. The permittee shall maintain records that document continuous compliance with the requirements of 40 CFR 63.7700(b) or (c) as specified in 40 CFR 63.7744(a).[2] **(40 CFR 63.7744 (a))**

8. The permittee shall keep the following information on a monthly basis for FG-NEWFOUNDRY-S1[2]:
   a. Tons of metal melted per month.
   b. Monthly and previous 12-month PM-10, CO, and VOC emission rates, calculated as follows:

      Monthly PM-10, CO and VOC emission rates shall be calculated using the following emission factors, or the emission factors established during the most recent tests, whichever is greater:

      EU-MP-S1:
      0.018 lb PM-10/ton of melt
      2.70 lb CO/ton of melt
      0.32 lb VOC/ton of melt

      EU-MCS-S1:
      0.15 lb PM-10/ton of melt
      3.80 lb CO/ton of melt
      0.94 lb VOC/ton of melt

      EU-SS-S1:
      0.14 lb PM-10/ton of melt
      0.24 lb VOC/ton of melt

      EU-CCFBACK-S1:
      0.16 lb PM-10/ton of melt

   Monthly melt rates shall be multiplied with the appropriate factors from above to determine the monthly PM-10, CO and VOC mass emissions from each baghouse. These monthly emission rates will be added to the previous 11-month total emission rates of each PM-10, CO and VOC to determine 12-month rolling emission rates in tons per year for PM-10, CO and VOC. [Note: Alternate CO and VOC emission factors may be used upon prior approval from the District Supervisor.]

   All records shall be kept on file for a period of at least five years and made available to the Department upon request.[2] **(R 336.1225, R 336.1702(a), 40 CFR 52.21(j))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

4. The permittee shall report each instance, as applicable, in which each emission limitation and/or operating limit specified in 40 CFR 63.7690, each work practice standard specified in 40 CFR 63.7700, and each operation and maintenance requirement specified in 40 CFR 63.7710 was not met, in accordance with the requirements of 40 CFR 63.7751.[2] **(40 CFR 63.7746, 40 CFR 63.7751)**

5. The permittee shall submit applicable notifications specified in 40 CFR 63.6(h)(4) and (5), 40 CFR 63.7(b) and (c), 63.8(e), 63.8(f)(4) and (6), and 63.9(b) through (h) for an initial notification, a notification of intent to conduct a performance test, and a notification of compliance status as specified in 40 CFR 63.7750.[2] **(40 CFR 63.7750)**

6. The permittee shall submit all semiannual compliance reports and semiannual reports of monitoring and deviations from any emissions limitation or operation and maintenance requirement as required by 40 CFR 63.7751(a), (b), and (d)[2]. **(40 CFR 63.7751 (a), (b), and (d))**

7. If a startup, shutdown, or malfunction occurs during the semiannual reporting period, that is not consistent with the SSMP, the permittee shall submit an immediate SSM report according to the requirements of 40 CFR 63.10(d)(5)(ii).[2] **(40 CFR 63.10(d)(5)(ii), 40 CFR 63.7751(c))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
NA	NA	NA	NA

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable provisions of the National Emission Standards for Hazardous Air Pollutants, as specified in 40 CFR, Part 63, Subpart A and Subpart EEEEE for Iron and Steel Foundries by the initial compliance date.[2] **(40 CFR Part 63, Subparts A and EEEEE)**

Footnotes:
[1]This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

FG-COATING-S1
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

Three GEOMET paint line systems each consisting of a mixing room, a paint spray booth equipped with HVLP applications and dry filter overspray control, and an induction cure process consisting of pre-curing and final cure steps for coating of metallic surfaces.

Emission Units: EULine1-S1, EULine2-S1, EULine3-S1

POLLUTION CONTROL EQUIPMENT

Dry filter overspray control

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. VOC	2,000 pounds per month[2]	Calendar month	EULine1-S1, EULine2-S1, EULine3-S1, (Each line)	SC VI.3	**R 336.1225, R 336.1702(d)**
2. VOC	10 tpy[2]	12-month rolling time period as determined at the end of each calendar month	EULine1-S1, EULine2-S1, EULine3-S1, (Each line)	SC VI.3	**R 336.1225, R 336.1702(d)**

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
NA	NA	NA	NA	NA	NA

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall capture all purge/clean-up solvents and waste coatings from all coating applications used in FG-COATING-S1. The permittee shall store these materials in closed containers and shall dispose of them in an acceptable manner in compliance with all applicable state rules and federal regulations.[2] **(R 336.1702(d))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall equip and maintain FG-COATING-S1 with high volume-low pressure (HVLP) spray applicators or comparable technology with equivalent transfer efficiency (e.g., electrostatic spray, dip, flowcoat, roller, dip-spin). For HVLP applicators, the permittee shall keep test caps available for pressure testing.[2] **(R 336.1702(d))**

2. The permittee shall not operate any FG-COATING-S1 paint spray booth unless all respective exhaust filters are installed, maintained and operated in a satisfactory manner.[2] **(R 336.1224, R 336.1301, R 336.1331, R 336.1910)**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. Within 60 days of notification by the AQD, verification of VOC emissions and VOC content (in pounds per gallon) of any coating, reducer or purge/clean-up solvent, as applied or as received, using federal Reference Test Method 25A, Method 24 or other EPA approved reference method, may be required for continued operation. Verification of the emission rates includes the submittal of a complete report of the test results to the AQD within 60 days following the last date of the test. Upon prior written approval by the AQD District Supervisor, VOC content may alternatively be determined from manufacturer's formulation data. If the Method 25A or Method 24 should differ from the formulation values, the permittee shall use the Method 25A or Method 24 results to determine compliance.[2] **(R 336.2001, R 336.2003, R 336.2004, R 336.1702(d))**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall complete all required calculations in a format acceptable to the AQD District Supervisor by the last day of the calendar month, for the previous calendar month, unless otherwise specified in any monitoring/recordkeeping special condition.[2] **(R 336.1225, R 336.1702(d))**

2. The permittee shall maintain a current listing from the manufacturer of the chemical composition of each coating, including the weight percent of each component. The data may consist of Material Safety Data Sheets, manufacturer's formulation data, or both as deemed acceptable by the AQD District Supervisor. The permittee shall keep all records and make them available to the Department upon request.[2] **(R 336.1224, R 336.1225, R 336.1702(d))**

3. The permittee shall keep the following information on a calendar month basis for FG-COATING-S1:
   a. Purchase orders and invoices for all coatings, reducers, and purge/clean-up solvents.
   b. VOC content, in pounds per gallon, of each coating, reducer and purge/clean-up solvent used.
   c. Gallons of each coating, reducer and purge/clean-up solvent used and reclaimed.
   d. VOC mass emission calculations determining the monthly emission rate for each coating line in pounds per calendar month.
   e. VOC mass emission calculations determining the annual emission rate for each coating line, in tons per 12-month rolling time period as determined at the end of each calendar month.

   The permittee shall keep the records in a format acceptable to the AQD District Supervisor. The permittee shall keep all records on file and make them available to the Department upon request.[2] **(R 336.1225, R 336.1702(d))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

4. Within 30 days after completion of the installation, construction, reconstruction, relocation, or modification authorized by this PTI, the permittee or the authorized agent pursuant to Rule 204, shall notify the AQD District Supervisor, in writing, of the completion of the activity. Completion of the installation, construction, reconstruction, relocation, or modification is considered to occur not later than commencement of trial operation of FG-COATING-S1.[2] **(R 336.1201(7)(a))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SV-MixRoom1	8[2]	40[2]	**R 336.1225, R 336.1901, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d)**
2. SV-SprayBooth1	24[2]	40[2]	**R 336.1225, R 336.1901, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d)**
3. SV-InducCure1	24[2]	40[2]	**R 336.1225, R 336.1901, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d)**
4. SV-MixRoom2	8[2]	40[2]	**R 336.1225, R 336.1901, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d)**
5. SV-SprayBooth2	24[2]	40[2]	**R 336.1225, R 336.1901, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d)**
6. SV-InducCure2	24[2]	40[2]	**R 336.1225, R 336.1901, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d)**
7. SV-MixRoom3	8[2]	40[2]	**R 336.1225, R 336.1901, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d)**
8. SV-SprayBooth3	24[2]	40[2]	**R 336.1225, R 336.1901, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d)**
9. SV-InducCure3	24[2]	40[2]	**R 336.1225, R 336.1901, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d)**

IX. OTHER REQUIREMENT(S)

NA

Footnotes:
[1] This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2] This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

FG-SOURCE-S1
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

All metallic surface coating lines and all associated purge and cleanup operations at the stationary source. This includes any metallic surface coating line covered by this or any other general permit or any PTI issued pursuant to Rule 201, and any metallic surface coating line exempt from the requirement to obtain a PTI pursuant to Rule 287 and/or Rule 290.

Emission Unit: NA

FLEXIBLE GROUP CONDITIONS

DESCRIPTION

Each new, reconstructed, and existing affected source described in 40 CFR 63.3881(a)(1), including the subcategories listed in 40 CFR, Part 63, Subpart MMMM, 40 CFR 63.3881(a)(2) through (6), meeting the applicability requirements of 40 CFR 63.3881(b), which is engaged in the surface coating of miscellaneous metal parts and products. The affected source includes the collection of all the items listed in 40 CFR 63.3882(b)(1) through (4). Surface coating is defined by 40 CFR 63.3881 as the application of coating to a substrate using, for example, spray guns or dip tanks. Surface coating also includes associated activities, such as surface preparation, cleaning, mixing, and storage if they are directly related to the application of the coating. The 40 CFR, Part 63, Subpart MMMM, does not apply to surface coating or a coating operation that meets any of the criteria of 40 CFR 63.3881(c)(1) through (17).

Emission Units: EULine1-S1, EULine2-S1, EULine3-S1

POLLUTION CONTROL EQUIPMENT

Dry filter overspray control

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Organic HAP	1.9 lbs per gal of coating solids[2]	12-month rolling time period *	New or Reconstructed - General Use Coating	SC VI.1 through VI.5	**40 CFR 63.3890(a)(1)**
* As determined at the end of each calendar month.					

1. The permittee shall determine whether the organic HAP emission rate is equal to or less than the applicable emission limits in 40 CFR 63.3890 using at least one of the following three options, which are listed in 40 CFR 63.3891(a) through (c):
   a. Compliant material option,
   b. Emission rate without add-on controls option, or
   c. Emission rate with add-on controls option.

   The permittee shall include all coatings, thinners, and/or other additives, and cleaning materials used when determining the emission rate.[2] **(40 CFR 63.3891)**

2. Any coating operation(s) using the compliant material option or the emission rate without add-on controls option, shall be in compliance with the applicable emission limits in 40 CFR 63.3890 at all times.[2] **(40 CFR 63.3900(a)(1))**

3. If the surface coating operation(s) meet the applicability criteria of more than one of the subcategory emission limits specified in 40 CFR 63.3890(a) or (b), the permittee may comply separately with each subcategory emission limit, or comply using one of the alternatives in 40 CFR 63.3890(c)(1) or (2).[2] **(40 CFR 63.3890(c))**

II. MATERIAL LIMIT(S)

For the compliant materials option, the permittee shall meet the material limits specified in the following table.

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Each Thinner and/or Additive	No Organic HAP *[2]	Continuous	Each coating operation using compliant material option	SC VI.1, VI.2, VI.3, and VI.4	**40 CFR 63.3891(a)**
2. Each Cleaning Material	No Organic HAP *[2]	Continuous	Each coating operation using compliant material option	SC VI.1, VI.2, VI.3, and VI.4	**40 CFR 63.3891(a)**
* Determined according to 40 CFR 63.3941(a).					

III. PROCESS/OPERATIONAL RESTRICTION(S)

NA

IV. DESIGN/EQUIPMENT PARAMETER(S)

NA

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii), 40 CFR 63.3931)**

NA

See Appendix 5

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii), 40 CFR 63.3931)**

1. The permittee shall keep all records required by 40 CFR 63.3930 in the format and timeframes outlined in 40 CFR 63.3931.[2] **(40 CFR 63.3942(d), 40 CFR 63.3952(d), 40 CFR 63.3963(j))**

2. The permittee shall maintain, at a minimum, the following records for each compliance period[2]:
   a. A copy of each notification and report that is submitted to comply with Subpart MMMM, and the documentation supporting each notification and report. **(40 CFR 63.3930(a))**
   b. A current copy of information provided by materials suppliers or manufacturers, such as manufacturer's formulation data, or test data used to determine the mass fraction of organic HAP and density of each coating, thinner and/or other additive, and cleaning material, and the volume fraction of coating solids for each coating. **(40 CFR 63.3930(b))**
   c. A list of the coating operations on which each compliance option was used, and the beginning and ending dates and times for each compliance option used. **(40 CFR 63.3930(c)(1))**
   d. For the compliant materials option, the calculation of the organic HAP content for each coating, using Equation 2 of 40 CFR 63.3941. **(40 CFR 63.3930(c)(2))**
   e. For the emission rate without add-on controls option, the calculation of the total mass of organic HAP emissions for the coatings, thinners and/or additives, and cleaning materials used each month using Equations 1, 1A through 1C and 2 of 40 CFR 63.3951; and, if applicable, the calculation used to determine mass of organic HAP in waste materials according to 40 CFR 63.3951(e)(4); the calculation of the total volume of coating solids used each month using Equation 2 of 40 CFR 63.3951; and the calculation of each 12-month organic HAP emission rate using Equation 3 of 40 CFR 63.3951. **(40 CFR 63.3930(c)(3))**
   f. The name and mass or volume of each coating, thinner and/or other additive, and cleaning material used during each compliance period. If the compliant material option is used for all coatings at the affected

source, the permittee may maintain purchase records for each material used rather than a record of the volume used. **(40 CFR 63.3930(d))**

g. The mass fraction of organic HAP for each coating, thinner and/or additive, and cleaning material used during each compliance period unless the material is tracked by weight. **(40 CFR 63.3930(e))**

h. The volume fraction of coating solids for each coating used during each compliance period. **(40 CFR 63.3930(f))**

i. For either the emission rate without add-on controls option, the density of for each coating, thinner and/or other additive, and cleaning material used during each compliance period. **(40 CFR 63.3930(g))**

j. The information specified in 40 CFR 63.3930(h)(1) through (3), if an allowance is used in Equation 1 of 40 CFR 63.3951 for organic HAP contained in waste materials sent to or designated for shipment to a treatment, storage, and disposal facility (TSDF) according to 40 CFR 63.3951(e)(4). **(40 CFR 63.3930(h))**

k. The date, time, and duration of each deviation. **(40 CFR 63.3930(j))**

3. For each coating used for the compliant coating option, the permittee shall demonstrate continuous compliance with the emission limit in 40 CFR 63.3890, for each compliance period, using Equation 2 of 40 CFR 63.3941. For each thinner and cleaning material used, the permittee shall determine continuous compliance according to 40 CFR 63.3941(a).[2] **(40 CFR 63.3942)**

4. For any coating operation or group of coating operations using the emission rate without add-on controls option, the permittee shall demonstrate continuous compliance with the applicable organic HAP emission limit in 40 CFR 63.3890, for each compliance period, according to 40 CFR 63.3951(a) through (g).[2] **(40 CFR 63.3952)**

See Appendix 3-S1

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

4. For the compliant material option, if any coating used for any 12-month compliance period exceeds the applicable emission limit specified in 40 CFR 63.3890; or any thinner or cleaning material used contains any organic HAP, the permittee shall report this as a deviation as specified in 40 CFR 63.3910(c)(6) and 40 CFR 63.3920(a)(5).[2] **(40 CFR 63.3942(b))**

5. For the emission rate without add-on controls, if the organic HAP emission rate for any 12-month compliance period exceeds the applicable emission limit specified in 40 CFR 63.3890, the permittee shall report this as a deviation as specified in 40 CFR 63.3910(c)(6) and 40 CFR 63.3920(a)(6).[2]
(40 CFR 63.3952(b))

6. The permittee shall submit the applicable notifications specified in 40 CFR 63.7(b) and (c), 63.8(f)(4) and 63.9(b) through (e) and (h), an initial notification and a notification of compliance status as specified in 40 CFR 63.3910.[2] **(40 CFR Part 63, Subparts A and MMMM)**

7. The permittee shall submit all semiannual compliance reports specified in 40 CFR 63.3920(a). Each semiannual compliance report shall identify which coating operation(s) used each compliance option, and if there were no deviations from the emission limitations in 40 CFR 63.3890, include a statement that the coating operations were in compliance.[2] **(40 CFR 63.3920, 40 CFR 63.3942(c), 40 CFR 63.3952(c), 40 CFR 63.3963(f))**

See Appendix 8-S1

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
NA	NA	NA	NA

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable provisions of the National Emission Standards for Hazardous Air Pollutants, as specified in 40 CFR, Part 63, Subpart A and Subpart MMMM for Surface Coating of Miscellaneous Metal Parts and Products by the initial compliance date.[2] **(40 CFR Part 63, Subparts A and MMMM)**

Footnotes:
[1]This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

E. NON-APPLICABLE REQUIREMENTS

At the time of the ROP issuance, the AQD has determined that no non-applicable requirements have been identified for incorporation into the permit shield provision set forth in the General Conditions in Part A pursuant to Rule 213(6)(a)(ii).

APPENDICES

Appendix 1-S1. Abbreviations and Acronyms

The following is an alphabetical listing of abbreviations/acronyms that may be used in this permit.

AQD	Air Quality Division	MM	Million
acfm	Actual cubic feet per minute	MSDS	Material Safety Data Sheet
BACT	Best Available Control Technology	MW	Megawatts
BTU	British Thermal Unit	NA	Not Applicable
°C	Degrees Celsius	NAAQS	National Ambient Air Quality Standards
CAA	Federal Clean Air Act	NESHAP	National Emission Standard for Hazardous Air Pollutants
CAM	Compliance Assurance Monitoring	NMOC	Non-methane Organic Compounds
CEM	Continuous Emission Monitoring	NOx	Oxides of Nitrogen
CFR	Code of Federal Regulations	NSPS	New Source Performance Standards
CO	Carbon Monoxide	NSR	New Source Review
COM	Continuous Opacity Monitoring	PM	Particulate Matter
department	Michigan Department of Environmental Quality	PM-10	Particulate Matter less than 10 microns in diameter
dscf	Dry standard cubic foot	pph	Pound per hour
dscm	Dry standard cubic meter	ppm	Parts per million
EPA	United States Environmental Protection Agency	ppmv	Parts per million by volume
EU	Emission Unit	ppmw	Parts per million by weight
°F	Degrees Fahrenheit	PS	Performance Specification
FG	Flexible Group	PSD	Prevention of Significant Deterioration
GACS	Gallon of Applied Coating Solids	psia	Pounds per square inch absolute
GC	General Condition	psig	Pounds per square inch gauge
gr	Grains	PeTE	Permanent Total Enclosure
HAP	Hazardous Air Pollutant	PTI	Permit to Install
Hg	Mercury	RACT	Reasonable Available Control Technology
hr	Hour	ROP	Renewable Operating Permit
HP	Horsepower	SC	Special Condition
H_2S	Hydrogen Sulfide	scf	Standard cubic feet
HVLP	High Volume Low Pressure *	sec	Seconds
ID	Identification (Number)	SCR	Selective Catalytic Reduction
IRSL	Initial Risk Screening Level	SO_2	Sulfur Dioxide
ITSL	Initial Threshold Screening Level	SRN	State Registration Number
LAER	Lowest Achievable Emission Rate	TAC	Toxic Air Contaminant
lb	Pound	Temp	Temperature
m	Meter	THC	Total Hydrocarbons
MACT	Maximum Achievable Control Technology	tpy	Tons per year
MAERS	Michigan Air Emissions Reporting System	µg	Microgram
MAP	Malfunction Abatement Plan	VE	Visible Emissions
MDEQ	Michigan Department of Environmental Quality	VOC	Volatile Organic Compounds
mg	Milligram	yr	Year
mm	Millimeter		

*For HVLP applicators, the pressure measured at the gun air cap shall not exceed 10 pounds per square inch gauge (psig).

Appendix 2-S1. Schedule of Compliance

The permittee certified in the ROP application that this stationary source is in compliance with all applicable requirements and the permittee shall continue to comply with all terms and conditions of this ROP. A Schedule of Compliance is not required. **(R 336.1213(4)(a), R 336.1119(a)(ii))**

Appendix 3-S1. Monitoring Requirements

The following monitoring procedures, methods, or specifications are the details to the monitoring requirements identified and referenced in EU-MCS-S1. See the following.

VOC Monitoring CEMS Requirements

1. Within 60 days of completion of testing, the permittee shall submit to the AQD two copies of the final report demonstrating the CEMS complies with the requirements of Performance Specification (PS) 8.

2. The span value shall be 2.0 times the lowest emission standard or as specified in the federal regulations.

3. The CEMS shall be installed, calibrated, maintained, and operated in accordance with the procedures set forth in 40 CFR, Part 60.13 and PS 8 of Appendix B to 40 CFR, Part 60.

4. Each calendar quarter, the permittee shall perform the Quality Assurance Procedures of the CEMS set forth in Appendix F of 40 CFR, Part 60. Within 30 days following the end of each calendar quarter, the permittee shall submit the results to the AQD in the format of the data assessment report (Figure 1, Appendix F).

Appendix 4-S1. Recordkeeping

Specific recordkeeping requirement formats and procedures are detailed in Part A or the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, this appendix is not applicable.

Appendix 5-S1. Testing Procedures

Specific testing requirement plans, procedures, and averaging times are detailed in the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, this appendix is not applicable.

Appendix 6-S1. Permits to Install/ROP Revision Applications

The following table lists any PTIs issued or ROP Revision Applications received since the effective date of the previously issued ROP No. MI-ROP-N5814-2006. Those ROP revision applications that are being issued concurrently with this ROP renewal are identified by an asterisk (*). Those revision applications not listed with an asterisk were processed prior to this renewal.

Source-Wide PTI No. MI-PTI-N5814-2006 is being reissued as Source-Wide PTI No. MI-PTI-N5814-2015.

Permit to Install Number	ROP Revision Application Number	Description of Equipment or Change	Corresponding Emission Unit(s) or Flexible Group(s)
280-06A	Administrative Amendment application #200900035*	Installation and operation of a new foundry used to produce gray iron.	EU-MP-S1, EU-MCS-S1, EU-SS-S1, EU-CCFFRONT-S1, EU-CCFBACK-S1
177-11	Minor Modification application #201200036*	Installation of three new coating lines.	EULine1-S1, EULine2-S1, EULine3-S1
280-06B	Minor Modification application #201400006*	Installation of regenerative thermal oxidizer control equipment to control VOHAP emissions from EU-MCS-S1.	EU-MCS-S1, FG-NEWFOUNDRY-S1

Appendix 7-S1. Emission Calculations

The permittee shall use the following calculations in conjunction with monitoring, testing or recordkeeping data to determine compliance with the applicable requirements referenced in the SOURCE-WIDE table.

Table 7.1
Summary of HAPs emission factors from the MPCC and SS stacks

Pollutant	MPCC Stack	SS Stack
	lb/ton iron melt	lb/ton iron melt
Single HAP	0.07	0.21
(Benzene)		
Total HAPS	0.11	0.60

Appendix 8-S1. Reporting

A. Annual, Semiannual, and Deviation Certification Reporting

The permittee shall use the MDEQ, AQD, Report Certification form (EQP 5736) and MDEQ, AQD, Deviation Report form (EQP 5737) for the annual, semiannual and deviation certification reporting referenced in the Reporting Section of the Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Alternative formats must meet the provisions of Rule 213(4)(c) and Rule 213(3)(c)(i), respectively, and be approved by the AQD District Supervisor.

B. Other Reporting

Specific reporting requirement formats and procedures are detailed in Part A or the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, Part B of this appendix is not applicable.

Section 2 – Gokoh Coldwater, Inc.

A. GENERAL CONDITIONS

Permit Enforceability

- All conditions in this permit are both federally enforceable and state enforceable unless otherwise noted. **(R 336.1213(5))**

- Those conditions that are hereby incorporated in a state-only enforceable Source-Wide PTI pursuant to Rule 201(2)(d) are designated by footnote one. **(R 336.1213(5)(a), R 336.1214a(5))**

- Those conditions that are hereby incorporated in a federally enforceable Source-Wide PTI pursuant to Rule 201(2)(c) are designated by footnote two. **(R 336.1213(5)(b), R 336.1214a(3))**

General Provisions

1. The permittee shall comply with all conditions of this ROP. Any ROP noncompliance constitutes a violation of Act 451, and is grounds for enforcement action, for ROP revocation or revision, or for denial of the renewal of the ROP. All terms and conditions of this ROP that are designated as federally enforceable are enforceable by the Administrator of the United States Environmental Protection Agency (USEPA) and by citizens under the provisions of the federal Clean Air Act (CAA). Any terms and conditions based on applicable requirements which are designated as "state-only" are not enforceable by the USEPA or citizens pursuant to the CAA. **(R 336.1213(1)(a))**

2. It shall not be a defense for the permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this ROP. **(R 336.1213(1)(b))**

3. This ROP may be modified, revised, or revoked for cause. The filing of a request by the permittee for a permit modification, revision, or termination, or a notification of planned changes or anticipated noncompliance does not stay any ROP term or condition. This does not supersede or affect the ability of the permittee to make changes, at the permittee's own risk, pursuant to Rule 215 and Rule 216. **(R 336.1213(1)(c))**

4. The permittee shall allow the department, or an authorized representative of the department, upon presentation of credentials and other documents as may be required by law and upon stating the authority for and purpose of the investigation, to perform any of the following activities **(R 336.1213(1)(d))**:
   a. Enter, at reasonable times, a stationary source or other premises where emissions-related activity is conducted or where records must be kept under the conditions of the ROP.
   b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of the ROP.
   c. Inspect, at reasonable times, any of the following:
      i. Any stationary source.
      ii. Any emission unit.
      iii. Any equipment, including monitoring and air pollution control equipment.
      iv. Any work practices or operations regulated or required under the ROP.
   d. As authorized by Section 5526 of Act 451, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the ROP or applicable requirements.

5. The permittee shall furnish to the department, within a reasonable time, any information the department may request, in writing, to determine whether cause exists for modifying, revising, or revoking the ROP or to determine compliance with this ROP. Upon request, the permittee shall also furnish to the department copies of any records that are required to be kept as a term or condition of this ROP. For information which is claimed by the permittee to be confidential, consistent with the requirements of the 1976 PA 442, MCL §15.231 et seq., and known as the Freedom of Information Act, the person may also be required to furnish the records directly to the USEPA together with a claim of confidentiality. **(R 336.1213(1)(e))**

6. A challenge by any person, the Administrator of the USEPA, or the department to a particular condition or a part of this ROP shall not set aside, delay, stay, or in any way affect the applicability or enforceability of any other condition or part of this ROP. **(R 336.1213(1)(f))**

7. The permittee shall pay fees consistent with the fee schedule and requirements pursuant to Section 5522 of Act 451. **(R 336.1213(1)(g))**

8. This ROP does not convey any property rights or any exclusive privilege. **(R 336.1213(1)(h))**

Equipment & Design

9. Any collected air contaminants shall be removed as necessary to maintain the equipment at the required operating efficiency. The collection and disposal of air contaminants shall be performed in a manner so as to minimize the introduction of contaminants to the outer air. Transport of collected air contaminants in Priority I and II areas requires the use of material handling methods specified in Rule 370(2). **(R 336.1370)**

10. Any air cleaning device shall be installed, maintained, and operated in a satisfactory manner and in accordance with the Michigan Air Pollution Control rules and existing law. **(R 336.1910)**

Emission Limits

11. Unless otherwise specified in this ROP, the permittee shall comply with Rule 301, which states, in part, "Except as provided in subrules 2, 3, and 4 of this rule, a person shall not cause or permit to be discharged into the outer air from a process or process equipment a visible emission of a density greater than the most stringent of the following: **(R 336.1301(1))**
    a. A 6-minute average of 20 percent opacity, except for one 6-minute average per hour of not more than 27 percent opacity.
    b. A limit specified by an applicable federal new source performance standard.

    The grading of visible emissions shall be determined in accordance with Rule 303.

12. The permittee shall not cause or permit the emission of an air contaminant or water vapor in quantities that cause, alone or in reaction with other air contaminants, either of the following:
    a. Injurious effects to human health or safety, animal life, plant life of significant economic value, or property.[1] **(R 336.1901(a))**
    b. Unreasonable interference with the comfortable enjoyment of life and property.[1] **(R 336.1901(b))**

Testing/Sampling

13. The department may require the owner or operator of any source of an air contaminant to conduct acceptable performance tests, at the owner's or operator's expense, in accordance with Rule 1001 and Rule 1003, under any of the conditions listed in Rule 1001(1). **(R 336.2001)**

14. Any required performance testing shall be conducted in accordance with Rule 1001(2), Rule 1001(3) and Rule 1003. **(R 336.2001(2), R 336.2001(3), R 336.2003(1))**

15. Any required test results shall be submitted to the Air Quality Division (AQD) in the format prescribed by the applicable reference test method within 60 days following the last date of the test. **(R 336.2001(5))**

Monitoring/Recordkeeping

16. Records of any periodic emission or parametric monitoring required in this ROP shall include the following information specified in Rule 213(3)(b)(i), where appropriate **(R 336.1213(3)(b))**:
    a. The date, location, time, and method of sampling or measurements.
    b. The dates the analyses of the samples were performed.
    c. The company or entity that performed the analyses of the samples.
    d. The analytical techniques or methods used.
    e. The results of the analyses.
    f. The related process operating conditions or parameters that existed at the time of sampling or measurement.

17. All required monitoring data, support information and all reports, including reports of all instances of deviation from permit requirements, shall be kept and furnished to the department upon request for a period of not less than 5 years from the date of the monitoring sample, measurement, report or application. Support information includes all calibration and maintenance records and all original strip-chart recordings, or other original data records, for continuous monitoring instrumentation and copies of all reports required by the ROP. **(R 336.1213(1)(e), R 336.1213(3)(b)(ii))**

Certification & Reporting

18. Except for the alternate certification schedule provided in Rule 213(3)(c)(iii)(B), any document required to be submitted to the department as a term or condition of this ROP shall contain an original certification by a Responsible Official which states that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete. **(R 336.1213(3)(c))**

19. A Responsible Official shall certify to the appropriate AQD District Office and to the USEPA that the stationary source is and has been in compliance with all terms and conditions contained in the ROP except for deviations that have been or are being reported to the appropriate AQD District Office pursuant to Rule 213(3)(c). This certification shall include all the information specified in Rule 213(4)(c)(i) through (v) and shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the certification are true, accurate, and complete. The USEPA address is: USEPA, Air Compliance Data - Michigan, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. **(R 336.1213(4)(c))**

20. The certification of compliance shall be submitted annually for the term of this ROP as detailed in the special conditions, or more frequently if specified in an applicable requirement or in this ROP. **(R 336.1213(4)(c))**

21. The permittee shall promptly report any deviations from ROP requirements and certify the reports. The prompt reporting of deviations from ROP requirements is defined in Rule 213(3)(c)(ii) as follows, unless otherwise described in this ROP. **(R 336.1213(3)(c))**
    a. For deviations that exceed the emissions allowed under the ROP, prompt reporting means reporting consistent with the requirements of Rule 912 as detailed in Condition 25. All reports submitted pursuant to this paragraph shall be promptly certified as specified in Rule 213(3)(c)(iii).
    b. For deviations which exceed the emissions allowed under the ROP and which are not reported pursuant to Rule 912 due to the duration of the deviation, prompt reporting means the reporting of all deviations in the semiannual reports required by Rule 213(3)(c)(i). The report shall describe reasons for each deviation and the actions taken to minimize or correct each deviation.
    c. For deviations that do not exceed the emissions allowed under the ROP, prompt reporting means the reporting of all deviations in the semiannual reports required by Rule 213(3)(c)(i). The report shall describe the reasons for each deviation and the actions taken to minimize or correct each deviation.

22. For reports required pursuant to Rule 213(3)(c)(ii), prompt certification of the reports is described in Rule 213(3)(c)(iii) as either of the following **(R 336.1213(3)(c))**:
    a. Submitting a certification by a Responsible Official with each report which states that, based on information and belief formed after reasonable inquiry, the statements and information in the report are true, accurate, and complete.
    b. Submitting, within 30 days following the end of a calendar month during which one or more prompt reports of deviations from the emissions allowed under the ROP were submitted to the department pursuant to Rule 213(3)(c)(ii), a certification by a Responsible Official which states that, "based on information and belief formed after reasonable inquiry, the statements and information contained in each of the reports submitted during the previous month were true, accurate, and complete". The certification shall include a listing of the reports that are being certified. Any report submitted pursuant to Rule 213(3)(c)(ii) that will be certified on a monthly basis pursuant to this paragraph shall include a statement that certification of the report will be provided within 30 days following the end of the calendar month.

23. Semiannually for the term of the ROP as detailed in the special conditions, or more frequently if specified, the permittee shall submit certified reports of any required monitoring to the appropriate AQD District Office. All instances of deviations from ROP requirements during the reporting period shall be clearly identified in the reports. **(R 336.1213(3)(c)(i))**

24. On an annual basis, the permittee shall report the actual emissions, or the information necessary to determine the actual emissions, of each regulated air pollutant as defined in Rule 212(6) for each emission unit utilizing the emissions inventory forms provided by the department. **(R 336.1212(6))**

25. The permittee shall provide notice of an abnormal condition, start-up, shutdown, or malfunction that results in emissions of a hazardous or toxic air pollutant which continue for more than one hour in excess of any applicable standard or limitation, or emissions of any air contaminant continuing for more than two hours in excess of an applicable standard or limitation, as required in Rule 912, to the appropriate AQD District Office. The notice shall be provided not later than two business days after the start-up, shutdown, or discovery of the abnormal conditions or malfunction. Notice shall be by any reasonable means, including electronic, telephonic, or oral communication. Written reports, if required under Rule 912, must be submitted to the appropriate AQD District Supervisor within 10 days after the start-up or shutdown occurred, within 10 days after the abnormal conditions or malfunction has been corrected, or within 30 days of discovery of the abnormal conditions or malfunction, whichever is first. The written reports shall include all of the information required in Rule 912(5) and shall be certified by a Responsible Official in a manner consistent with the CAA. **(R 336.1912)**

Permit Shield

26. Compliance with the conditions of the ROP shall be considered compliance with any applicable requirements as of the date of ROP issuance, if either of the following provisions is satisfied. **(R 336.1213(6)(a)(i), R 336.1213(6)(a)(ii))**
    a. The applicable requirements are included and are specifically identified in the ROP.
    b. The permit includes a determination or concise summary of the determination by the department that other specifically identified requirements are not applicable to the stationary source.

    Any requirements identified in Part E of this ROP have been identified as non-applicable to this ROP and are included in the permit shield.

27. Nothing in this ROP shall alter or affect any of the following:
    a. The provisions of Section 303 of the CAA, emergency orders, including the authority of the USEPA under Section 303 of the CAA. **(R 336.1213(6)(b)(i))**
    b. The liability of the owner or operator of this source for any violation of applicable requirements prior to or at the time of this ROP issuance. **(R 336.1213(6)(b)(ii))**
    c. The applicable requirements of the acid rain program, consistent with Section 408(a) of the CAA. **(R 336.1213(6)(b)(iii))**

d. The ability of the USEPA to obtain information from a source pursuant to Section 114 of the CAA. **(R 336.1213(6)(b)(iv))**

28. The permit shield shall not apply to provisions incorporated into this ROP through procedures for any of the following:
    a. Operational flexibility changes made pursuant to Rule 215. **(R 336.1215(5))**
    b. Administrative Amendments made pursuant to Rule 216(1)(a)(i)-(iv). **(R 336.1216(1)(b)(iii))**
    c. Administrative Amendments made pursuant to Rule 216(1)(a)(v) until the amendment has been approved by the department. **(R 336.1216(1)(c)(iii))**
    d. Minor Permit Modifications made pursuant to Rule 216(2). **(R 336.1216(2)(f))**
    e. State-Only Modifications made pursuant to Rule 216(4) until the changes have been approved by the department. **(R 336.1216(4)(e))**

29. Expiration of this ROP results in the loss of the permit shield. If a timely and administratively complete application for renewal is submitted not more than 18 months, but not less than 6 months, before the expiration date of the ROP, but the department fails to take final action before the end of the ROP term, the existing ROP does not expire until the renewal is issued or denied, and the permit shield shall extend beyond the original ROP term until the department takes final action. **(R 336.1217(1)(c), R 336.1217(1)(a))**

Revisions

30. For changes to any process or process equipment covered by this ROP that do not require a revision of the ROP pursuant to Rule 216, the permittee must comply with Rule 215. **(R 336.1215, R 336.1216)**

31. A change in ownership or operational control of a stationary source covered by this ROP shall be made pursuant to Rule 216(1). **(R 336.1219(2))**

32. For revisions to this ROP, an administratively complete application shall be considered timely if it is received by the department in accordance with the time frames specified in Rule 216. **(R 336.1210(9))**

33. Pursuant to Rule 216(1)(b)(iii), Rule 216(2)(d) and Rule 216(4)(d), after a change has been made, and until the department takes final action, the permittee shall comply with both the applicable requirements governing the change and the ROP terms and conditions proposed in the application for the modification. During this time period, the permittee may choose to not comply with the existing ROP terms and conditions that the application seeks to change. However, if the permittee fails to comply with the ROP terms and conditions proposed in the application during this time period, the terms and conditions in the ROP are enforceable. **(R 336.1216(1)(c)(iii), R 336.1216(2)(d), R 336.1216(4)(d))**

Reopenings

34. A ROP shall be reopened by the department prior to the expiration date and revised by the department under any of the following circumstances:
    a. If additional requirements become applicable to this stationary source with three or more years remaining in the term of the ROP, but not if the effective date of the new applicable requirement is later than the ROP expiration date. **(R 336.1217(2)(a)(i))**
    b. If additional requirements pursuant to Title IV of the CAA become applicable to this stationary source. **(R 336.1217(2)(a)(ii))**
    c. If the department determines that the ROP contains a material mistake, information required by any applicable requirement was omitted, or inaccurate statements were made in establishing emission limits or the terms or conditions of the ROP. **(R 336.1217(2)(a)(iii))**
    d. If the department determines that the ROP must be revised to ensure compliance with the applicable requirements. **(R 336.1217(2)(a)(iv))**

Renewals

35. For renewal of this ROP, an administratively complete application shall be considered timely if it is received by the department not more than 18 months, but not less than 6 months, before the expiration date of the ROP. **(R 336.1210(7))**

Stratospheric Ozone Protection

36. If the permittee is subject to Title 40 of the Code of Federal Regulations (CFR), Part 82 and services, maintains, or repairs appliances except for motor vehicle air conditioners (MVAC), or disposes of appliances containing refrigerant, including MVAC and small appliances, or if the permittee is a refrigerant reclaimer, appliance owner or a manufacturer of appliances or recycling and recovery equipment, the permittee shall comply with all applicable standards for recycling and emissions reduction pursuant to 40 CFR, Part 82, Subpart F.

37. If the permittee is subject to 40 CFR, Part 82, and performs a service on motor (fleet) vehicles when this service involves refrigerant in the MVAC, the permittee is subject to all the applicable requirements as specified in 40 CFR, Part 82, Subpart B, Servicing of Motor Vehicle Air Conditioners. The term "motor vehicle" as used in Subpart B does not include a vehicle in which final assembly of the vehicle has not been completed by the original equipment manufacturer. The term MVAC as used in Subpart B does not include the air-tight sealed refrigeration system used for refrigerated cargo or an air conditioning system on passenger buses using Hydrochlorofluorocarbon-22 refrigerant.

Risk Management Plan

38. If subject to Section 112(r) of the CAA and 40 CFR, Part 68, the permittee shall register and submit to the USEPA the required data related to the risk management plan for reducing the probability of accidental releases of any regulated substances listed pursuant to Section 112(r)(3) of the CAA as amended in 40 CFR 68.130. The list of substances, threshold quantities, and accident prevention regulations promulgated under 40 CFR, Part 68, do not limit in any way the general duty provisions under Section 112(r)(1).

39. If subject to Section 112(r) of the CAA and 40 CFR, Part 68, the permittee shall comply with the requirements of 40 CFR, Part 68, no later than the latest of the following dates as provided in 40 CFR 68.10(a):
    a. June 21, 1999,
    b. Three years after the date on which a regulated substance is first listed under 40 CFR 68.130, or
    c. The date on which a regulated substance is first present above a threshold quantity in a process.

40. If subject to Section 112(r) of the CAA and 40 CFR, Part 68, the permittee shall submit any additional relevant information requested by any regulatory agency necessary to ensure compliance with the requirements of 40 CFR, Part 68.

41. If subject to Section 112(r) of the CAA and 40 CFR, Part 68, the permittee shall annually certify compliance with all applicable requirements of Section 112(r) as detailed in Rule 213(4)(c)). **(40 CFR, Part 68)**

Emission Trading

42. Emission averaging and emission reduction credit trading are allowed pursuant to any applicable interstate or regional emission trading program that has been approved by the Administrator of the USEPA as a part of Michigan's State Implementation Plan. Such activities must comply with Rule 215 and Rule 216. **(R 336.1213(12))**

Permit To Install (PTI)

43. The process or process equipment included in this permit shall not be reconstructed, relocated, or modified unless a PTI authorizing such action is issued by the department, except to the extent such action is exempt from the PTI requirements by any applicable rule. [2] **(R 336.1201(1))**

44. The department may, after notice and opportunity for a hearing, revoke PTI terms or conditions if evidence indicates the process or process equipment is not performing in accordance with the terms and conditions of the PTI or is violating the department's rules or the CAA. [2] **(R 336.1201(8), Section 5510 of Act 451)**

45. The terms and conditions of a PTI shall apply to any person or legal entity that now or hereafter owns or operates the process or process equipment at the location authorized by the PTI. If a new owner or operator submits a written request to the department pursuant to Rule 219 and the department approves the request, this PTI will be amended to reflect the change of ownership or operational control. The request must include all of the information required by Subrules (1)(a), (b) and (c) of Rule 219. The written request shall be sent to the appropriate AQD District Supervisor, MDEQ. [2] **(R 336.1219)**

46. If the installation, reconstruction, relocation, or modification of the equipment for which PTI terms and conditions have been approved has not commenced within 18 months of the original PTI issuance date, or has been interrupted for 18 months, the applicable terms and conditions from that PTI, as incorporated into the ROP, shall become void unless otherwise authorized by the department. Furthermore, the person to whom that PTI was issued, or the designated authorized agent, shall notify the department via the Supervisor, Permit Section, MDEQ, AQD, P. O. Box 30260, Lansing, Michigan 48909, if it is decided not to pursue the installation, reconstruction, relocation, or modification of the equipment allowed by the terms and conditions from that PTI. [2] **(R 336.1201(4))**

Footnotes:
[1]This condition is state-only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

B. SOURCE-WIDE CONDITIONS

Part B outlines the Source-Wide Terms and Conditions that apply to this stationary source. The permittee is subject to these special conditions for the stationary source in addition to the general conditions in Part A and any other terms and conditions contained in this ROP.

The permittee shall comply with all specific details in the special conditions and the underlying applicable requirements cited. If a specific condition type does not apply to this source, NA (not applicable) has been used in the table. If there are no Source-Wide Conditions, this section will be left blank.

C. EMISSION UNIT CONDITIONS

Part C outlines terms and conditions that are specific to individual emission units listed in the Emission Unit Summary Table. The permittee is subject to the special conditions for each emission unit in addition to the General Conditions in Part A and any other terms and conditions contained in this ROP.

The permittee shall comply with all specific details in the special conditions and the underlying applicable requirements cited. If a specific condition type does not apply, NA (not applicable) has been used in the table. If there are no conditions specific to individual emission units, this section will be left blank.

EMISSION UNIT SUMMARY TABLE

The descriptions provided below are for informational purposes and do not constitute enforceable conditions.

Emission Unit ID	Emission Unit Description (Including Process Equipment & Control Device(s))	Installation Date/ Modification Date	Flexible Group ID
EU-SHELLCORE-S2	Seven shell core machines with horizontal exhaust to ambient air. Core wash tank (limited use) with dust collector control exhausted inside the building.	12/02/11	NA
EU-SILOS-S2	Two 75-ton capacity sand storage silos, sand handling equipment, and two sand mixers (sand is mixed with resin) with a fabric filter dust collection system. #1, 8,500 cfm. Includes transfer of sand from trucks to the silo and pneumatic sand feed through enclosed piping from the silo.	12/02/11	NA
EU-LAEMPE#1AND#2-S2	Two Laempe cold box core machines. Phenolic urethane cold box core making process. Mixed sand/resin is set to make cores. The Triethylamine (TEA) catalyst. Emission control is two Dakota acid scrubbers, 3,850 cfm each. Equipment includes two Laempe core making machines and two natural gas fired core ovens, 1.5 MMBtu/hr each; 1.33 tons/hr. nominal throughput capacity.	12/02/11	NA
EU-MISCELLANEOUS-S2	Use of materials ancillary to the core making process including daub/mud, glue/paste, coating, core box release agent, and metal cleaners.	12/02/11	NA

EU-SHELLCORE-S2
EMISSION UNIT CONDITIONS

DESCRIPTION

Seven shell core machines with horizontal exhaust to ambient air. Core wash tank (limited use) with dust collector control exhausted inside building.

Flexible Group ID: NA

POLLUTION CONTROL EQUIPMENT

Horizontal exhaust to ambient air from shell core machines at 9,300 cfm. 2,400 cfm dust collector on the wash tank exhausted inside the building.

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. VOC	1.0 tpy[2]	12-month rolling time period as determined at the end of each calendar month	EU-SHELLCORE-S2	SC VI.1	**R 336.1702(a)**

II. MATERIAL LIMIT(S)

NA

III. PROCESS/OPERATIONAL RESTRICTION(S)

NA

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate the EU-SHELLCORE-S2 core wash tank unless the dust collector is installed, maintained, and operated in a satisfactory manner. Satisfactory operation includes, but is not limited to, venting the dust collector exhaust inside the building.[2] **(R 336.1301, R 336.1331, R 336.1910)**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

NA

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall calculate the VOC emission rates from EU-SHELLCORE-S2 for each calendar month and 12-month rolling time period using a method acceptable to the AQD District Supervisor. The permittee shall keep all records on file at the facility and make them available to the Department upon request.[2] **(R 336.1702)**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8-S2

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SVSHELLCORE[A]	24[2]	14[2]	**R 336.2803, R 336.2804, 40 CFR 52.21 (c) & (d)**
[A]Exhaust is vented horizontally to the ambient air			

IX. OTHER REQUIREMENT(S)

NA

Footnotes:
[1] This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2] This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

EU-SILOS-S2
EMISSION UNIT CONDITIONS

DESCRIPTION

Two 75-ton capacity sand storage silos, sand handling equipment, and two sand mixers (sand is mixed with resin) with a fabric filter dust collection system. #1, 8500 cfm.

Includes transfer of sand from trucks to the silo and pneumatic sand feed through enclosed piping from the silo.

Flexible Group ID: NA

POLLUTION CONTROL EQUIPMENT

Fabric filter dust collection system #1, 8500 cfm

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. PM	0.10 lb/1,000 lb exhaust gas[2]	Test Protocol*	EU-SILOS-S2	SC VI.5, VI.6	**R 336.1331**
2. PM	2.50 tpy[2]	12-month rolling time period as determined at the end of each calendar month	EU-SILOS-S2	SC VI.4	**R 336.1331**
*Test Protocol shall specify averaging time					

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Sand	25,000 tons/yr throughput[2]	12-month rolling time period as determined at the end of each calendar month	EU-SILOS-S2	SC VI.1	**R 336.1205(3) R 336.1331**

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall not operate EU-SILOS-S2 unless a malfunction abatement plan (MAP) as described in Rule 911(2), for the sand storage and handling operations, has been submitted within 90 days of permit issuance, and is implemented and maintained.[2] **(R 336.1331, R 336.1910, R 336.1911, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate EU-SILOS-S2 unless the fabric filter system is installed, maintained, and operated in a satisfactory manner.[2] **(R 336.1205(3), R 336.1301, R 336.1331, R 336.1910)**

2. The permittee shall not operate EU-SILOS-S2 unless a gauge, which continuously measures the pressure drop across the fabric filter dust collection system is installed, maintained and operated in a satisfactory manner.[2] **(R 336.1301, R 336.1331, R 336.1910)**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

NA

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall monitor and record, in a satisfactory manner, the sand usage for EU-SILOS-S2 on a monthly and 12-month rolling time period basis. The permittee shall keep all records on file at the facility and make them available to the Department upon request.[2] **(R 336.1205, R 336.1301, R 336.1331)**

2. The permittee shall monitor and record, in a satisfactory manner, the pressure drop across the EU-SILOS-S2 fabric filter dust collection system on an each operational day basis.[2] **(R 336.1301, R 336.1331, R 336.1910)**

3. The permittee shall keep, in a satisfactory manner, all daily records of the EU-SILOS-S2 fabric filter dust collection system pressure drop, as required by SC VI.2 on file at the facility and make them available to the Department upon request.[2] **(R 336.1301, R 336.1331, R 336.1910)**

4. The permittee shall calculate the PM emission rates from EU-SILOS-S2 for each calendar month and 12-month rolling time period using a method acceptable to the AQD District Supervisor. The permittee shall keep all records on file at the facility and make them available to the Department upon request.[2] **(R 336.1331)**

5. The permittee shall verify the presence of visible emissions by taking six-minute visible emission readings from EU-SILOS-S2 a minimum of once per week. Either a certified or non-certified reader shall take each visible emission reading during routine operating conditions. Multiple stacks may be observed simultaneously. If the permittee observes any visible emissions, the permittee shall immediately implement the following procedures:[2]
   a. The permittee shall perform the six-minute visible emission readings at least once every 30 minutes until emissions are no longer visible or until emissions have been observed for more than two hours.[2]
   b. If visible emissions have been observed for more than two hours, a certified reader shall determine the opacity using Federal Reference Test Method 9 (40 CFR Part 60, Appendix A).[2]
   c. If the results of the Federal Reference Test Method 9 visible emission observation indicate a violation of the opacity standard specified in GC 11, the permittee shall immediately initiate corrective actions.[2]
   (R 336.1301, R 336.1303)

6. The permittee shall keep, in a satisfactory manner, records of all visible emission readings from EU-SILOS-S2. At a minimum, records shall include the date, time, name of observer/reader, whether the reader is certified, and status of visible emissions. The permittee shall keep all records on file and make them available to the Department upon request.[2] **(R 336.1301, R 336.1303, R 336.1910)**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8-S2

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1.SVSILOS	18[2]	25[2]	**R 336.2803, R 336.2804, 40 CFR 52.21 (c) & (d)**

IX. OTHER REQUIREMENT(S)

NA

Footnotes:
[1] This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2] This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

EU-LAEMPE#1AND#2-S2
EMISSION UNIT CONDITIONS

DESCRIPTION

Two Laempe cold box core machines.

A phenolic urethane cold box core making process. Mixed sand/resin is set to make cores. The TEA catalyst. Emission control is two Dakota acid scrubbers, 3850 cfm each.

Equipment includes two Laempe core making machines and two natural gas fired core ovens, 1.5 MMBtu/hr. each; 1.33 tons/hr. nominal throughput capacity.

Flexible Group ID: NA

POLLUTION CONTROL EQUIPMENT

The TEA catalyst emissions controlled by two Dakota packed tower acid scrubbers, 3850 cfm each

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. VOC	1.54 tpy[2]	12-month rolling time period as determined at the end of each calendar month	EU-LAEMPE#1AND#2-S2	SC VI.3	**R 336.1702**
2. TEA	1 ppmv (or 99% reduction)[2]	Test Protocol*	EU-LAEMPE#1AND#2-S2	SC V.1	**R 336.1225, 40 CFR 63.7690 (a)(11)(i) or (ii)**
3. Visible Emissions	20% opacity (except for one 6-minute average per hour of not more than 27% opacity)[2]	Test Protocol*	Any building or structure housing EU-LAEMPE#1AND#2-S2	SC V.2	**40 CFR 63.7690 (a)(7)**
*Test Protocol shall specify averaging time					

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Resin Part A	115 tons/yr throughput[2]	12-month rolling time period as determined at the end of each calendar month	EU-LAEMPE#1AND#2-S2	SC VI.1	**R 336.1702**
2. Resin Part B	115 tons/yr throughput[2]	12-month rolling time period as determined at the end of each calendar month	EU-LAEMPE#1AND#2-S2	SC VI.1	**R 336.1702**
3. Catalyst TEA	35 tons/yr throughput[2]	12-month rolling time period as determined at the end of each calendar month	EU-LAEMPE#1AND#2-S2	SC VI.1	**R 336.1702**

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall burn only natural gas in the core ovens of EU-LAEMPE#1AND#2-S2.[2] **(R 336.1225, R 336.1702, R 336.2803, R 336.2804, 40 CFR 52.21(c) & (d))**

2. The permittee shall submit to the AQD District Supervisor, implement, and maintain an approvable operation and maintenance plan for the EU-LAEMPE#1AND#2-S2 packed tower scrubber system. The plan shall contain all information required by 40 CFR 63.7710(b).[2] **(40 CFR 63.7710(b), 40 CFR 63.7745)**

3. The permittee shall not operate EU-LAEMPE#1AND#2-S2 unless the packed tower scrubber system 3-hour average pH of the scrubber blowdown, as measured by a continuous parameter monitoring system, does not exceed 4.5 OR the pH of the scrubber blowdown, as measured once every 8 hours during process operations, does not exceed 4.5.[2] **(R 336.1225, R 336.1702, R 336.1901, R 336.1910, 40 CFR 63.7690(b)(5))**

4. The permittee shall not operate EU-LAEMPE#1AND#2-S2 unless the packed tower scrubber system 3-hour average scrubbing liquid flow rate is maintained at or above the minimum level established during the initial or subsequent performance test.[2] **(R 336.1225, R 336.1702, R 336.1901, R 336.1910, 40 CFR 63.7690(b)(5))**

5. The permittee shall operate and maintain the air pollution control and monitoring equipment in a manner consistent with good air pollution control practices for minimizing emissions.[2] **(40 CFR 63.6(e)(1)(1), 40 CFR 63.7710(a))**

6. The permittee shall comply with the applicable emission limitations, work practice standards, and operation and maintenance requirements in 40 CFR Part 63, Subpart EEEEE at all times, except during periods of startup, shutdown, or malfunction.[2] **(40 CFR 63.7720(a))**

7. The permittee shall develop and implement a written startup, shutdown, and malfunction plan in accordance with 40 CFR 63.6(e)(3).[2] **(40 CFR 63.7720(c))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate EU-LAEMPE#1AND#2-S2 unless the packed tower scrubber system is installed, maintained, and operated in a satisfactory manner. Satisfactory operation includes, but is not limited to, installing and maintaining the scrubber according to the provisions outlined in 40 CFR 63.7690(b) and 40 CFR 63.7710.[2] **(R 336.1225, 40 CFR 63.7690(b), 40 CFR 63.7710)**

2. The permittee shall install, calibrate, maintain and operate in a satisfactory manner, a continuous parameter monitoring system for the EU-LAEMPE#1AND#2-S2 packed tower scrubber system according to the provisions outlined in 40 CFR 63.7690(b) and 40 CFR 63.7741.[2] **(R 336.1225, R 336.1702, R 336.1910, 40 CFR 63.7690(b), 40 CFR 63.7740, 40 CFR 63.7741)**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. No less frequently than every 5 years and each time the permittee elects to change an operating limit or to comply with a different alternative emissions limit, the permittee shall demonstrate compliance with the TEA emission limitations from EU-LAEMPE#1AND#2-S2 by subsequent testing at owner's expense, in accordance with 40 CFR Part 63, Subparts A and EEEEE. No less than 60 days prior to testing, the permittee shall submit a complete test plan to the AQD Technical Programs Unit and District Office. The AQD must approve the final plan prior to testing. Verification of compliance with the emission limitations includes the submittal of a complete report of the test results to the AQD Technical Programs Unit and District Office within 60 days following the last date of the test.[2] **(40 CFR 63.7731(a), 40 CFR 63.7743)**

2. No less frequently than once every 6 months, the permittee shall demonstrate compliance with the opacity limitation from EU-LAEMPE#1AND#2-S2 by subsequent testing at owner's expense, in accordance with 40 CFR Part 63, Subparts A and EEEEE. No less than 60 days prior to testing, the permittee shall submit a

notification of intent to perform a compliance test to the AQD Technical Programs Unit and District Office. Verification of compliance with the limitation includes the submittal of a complete report of the test results to the AQD Technical Programs Unit and District Office within 60 days following the last date of the test.[2] **(40 CFR 63.7731(b), 40 CFR 63.7743)**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall monitor and record, in a satisfactory manner, the resin and catalyst usage for EU-LAEMPE#1AND#2-S2 on a monthly and 12-month rolling time period basis.[2] **(R 336.1225, R 336.1702)**

2. The permittee shall monitor and record the EU-LAEMPE#1AND#2-S2 packed tower scrubber system scrubbing liquid flow rate and pH of the scrubber blowdown using the continuous parameter monitoring system in accordance with the requirements outlined in 40 CFR 63.7740, 40 CFR 63.7741, 40 CFR 63.7742, and 40 CFR 63.7743.[2] **(R 336.1225, R 336.1702, R 336.1910, 40 CFR 63.7740, 40 CFR 63.7741, 40 CFR 63.7742, 40 CFR 63.7743)**

3. The permittee shall calculate the VOC emission rates from EU-LAEMPE#1AND#2-S2 for each 12 month rolling time period using a method acceptable to the AQD District Supervisor.[2] **(R 336.1702)**

4. The permittee shall keep, in a satisfactory manner, records to demonstrate continuous compliance with the applicable operation and maintenance requirements of 40 CFR Part 63, Subpart EEEEE. All records shall be kept on file and made available to the Department upon request.[2] **(40 CFR 63.7745, 40 CFR 63.7753)**

5. The permittee shall keep, in a satisfactory manner, all records required by 40 CFR 63.7752 to demonstrate compliance with 40 CFR Part 63, Subpart EEEEE. All records shall be kept on file and made available to the Department upon request.[2] **(40 CFR 63.7752, 40 CFR 63.7753)**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

4. The permittee shall submit all applicable notifications required in 40 CFR 63.8(e), 40 CFR 63.8(f)(4) and (6) for EU-LAEMPE#1AND#2-S2.[2] **(40 CFR 63.6, 40 CFR 63.7, 40 CFR 63.8, 40 CFR 63.9, 40 CFR 63.7750)**

5. The permittee shall submit semiannual compliance reports. The permittee shall submit all records to the AQD District Supervisor in an acceptable format, in accordance with 40 CFR 63.7751.[2] **(40 CFR 63.7746, 40 CFR 63.7751)**

See Appendix 8-S2

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SVLAEMPE#1	20[2]	52[2]	**R 336.1225, R 336.2803, R 336.2804, 40 CFR 52.21 (c) & (d)**
2. SVLAEMPE#2	20[2]	51[2]	**R 336.1225, R 336.2803, R 336.2804, 40 CFR 52.21 (c) & (d)**
3. SVLaempeOven1	26[2]	52[2]	**R 336.1225, R 336.2803, R 336.2804, 40 CFR 52.21 (c) & (d)**
4. SVLaempeOven2	11[2]	53[2]	**R 336.1225, R 336.2803, R 336.2804, 40 CFR 52.21 (c) & (d)**

IX. OTHER REQUIREMENT(S)

1. Within 30 days after the compliance date specified in 40 CFR 63.7683, the permittee shall demonstrate initial compliance with the applicable work practice standards outlined in 40 CFR 63.7700 and operation and maintenance requirements outlined in 40 CFR 63.7710.[2] **(40 CFR 63.7730(b), 40 CFR 63.7734, 40 CFR 63.7735, 40 CFR 63.7736)**

Footnotes:
[1] This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2] This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

EU-MISCELLANEOUS-S2
EMISSION UNIT CONDITIONS

DESCRIPTION

Use of materials ancillary to the core making process including daub/mud, glue/paste, coating, core box release agent, and metal cleaners

Flexible Group ID: NA

POLLUTION CONTROL EQUIPMENT

NA

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. VOC	7.0 tpy[2]	12-month rolling time period as determined at the end of each calendar month	EU-MISCELLANEOUS-S2	SC VI.1, VI.2, VI.3	**R 336.1702**

II. MATERIAL LIMIT(S)

NA

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall handle all VOC and/or HAP containing materials, including coatings, reducers, solvents and thinners, in a manner to minimize the generation of fugitive emissions. The permittee shall keep containers covered at all times except when operator access is necessary.[2] **(R 336.1205(3), R 336.1224, R 336.1225, R 336.1702(a))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

NA

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

NA

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall monitor and record, in a satisfactory manner, the VOC content of each material included in EU-MISCELLANEOUS-S2. A Material Safety Data Sheet or other manufacturer's certification acceptable to the District Supervisor is a satisfactory record.[2] **(R 336.1205(3), R 336.1225, R 336.1702(a))**

2. The permittee shall monitor and record, in a satisfactory manner, the usage rate in gallons on a monthly and 12-month rolling time period basis of each material included in EU-MISCELLANEOUS-S2.[2] **(R 336.1205, R 336.1225, R 336.1702)**

3. The permittee shall calculate and keep records of the VOC emission rate from EU-MISCELLANEOUS-S2 for each 12-month rolling time period using a method acceptable to the AQD District Supervisor.[2] **(R 336.1205, R 336.1225, R 336.1702)**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8-S2

VIII. STACK/VENT RESTRICTION(S)

NA

IX. OTHER REQUIREMENT(S)

NA

Footnotes:
[1]This condition is state-only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

D. FLEXIBLE GROUP CONDITIONS

Part D outlines the terms and conditions that apply to more than one emission unit. The permittee is subject to the special conditions for each flexible group in addition to the General Conditions in Part A and any other terms and conditions contained in this ROP.

The permittee shall comply with all specific details in the special conditions and the underlying applicable requirements cited. If a specific condition type does not apply, NA (not applicable) has been used in the table. If there are no special conditions that apply to more than one emission unit, this section will be left blank.

E. NON-APPLICABLE REQUIREMENTS

At the time of the ROP issuance, the AQD has determined that no non-applicable requirements have been identified for incorporation into the permit shield provision set forth in the General Conditions in Part A pursuant to Rule 213(6)(a)(ii).

APPENDICES

Appendix 1-S2. Abbreviations and Acronyms

The following is an alphabetical listing of abbreviations/acronyms that may be used in this permit.

AQD	Air Quality Division	MM	Million
acfm	Actual cubic feet per minute	MSDS	Material Safety Data Sheet
BACT	Best Available Control Technology	MW	Megawatts
BTU	British Thermal Unit	NA	Not Applicable
°C	Degrees Celsius	NAAQS	National Ambient Air Quality Standards
CAA	Federal Clean Air Act	NESHAP	National Emission Standard for Hazardous Air Pollutants
CAM	Compliance Assurance Monitoring	NMOC	Non-methane Organic Compounds
CEM	Continuous Emission Monitoring	NOx	Oxides of Nitrogen
CFR	Code of Federal Regulations	NSPS	New Source Performance Standards
CO	Carbon Monoxide	NSR	New Source Review
COM	Continuous Opacity Monitoring	PM	Particulate Matter
department	Michigan Department of Environmental Quality	PM-10	Particulate Matter less than 10 microns in diameter
dscf	Dry standard cubic foot	pph	Pound per hour
dscm	Dry standard cubic meter	ppm	Parts per million
EPA	United States Environmental Protection Agency	ppmv	Parts per million by volume
EU	Emission Unit	ppmw	Parts per million by weight
°F	Degrees Fahrenheit	PS	Performance Specification
FG	Flexible Group	PSD	Prevention of Significant Deterioration
GACS	Gallon of Applied Coating Solids	psia	Pounds per square inch absolute
GC	General Condition	psig	Pounds per square inch gauge
gr	Grains	PeTE	Permanent Total Enclosure
HAP	Hazardous Air Pollutant	PTI	Permit to Install
Hg	Mercury	RACT	Reasonable Available Control Technology
hr	Hour	ROP	Renewable Operating Permit
HP	Horsepower	SC	Special Condition
H_2S	Hydrogen Sulfide	scf	Standard cubic feet
HVLP	High Volume Low Pressure *	sec	Seconds
ID	Identification (Number)	SCR	Selective Catalytic Reduction
IRSL	Initial Risk Screening Level	SO_2	Sulfur Dioxide
ITSL	Initial Threshold Screening Level	SRN	State Registration Number
LAER	Lowest Achievable Emission Rate	TAC	Toxic Air Contaminant
lb	Pound	Temp	Temperature
m	Meter	THC	Total Hydrocarbons
MACT	Maximum Achievable Control Technology	tpy	Tons per year
MAERS	Michigan Air Emissions Reporting System	µg	Microgram
MAP	Malfunction Abatement Plan	VE	Visible Emissions
MDEQ	Michigan Department of Environmental Quality	VOC	Volatile Organic Compounds
mg	Milligram	yr	Year
mm	Millimeter		

*For HVLP applicators, the pressure measured at the gun air cap shall not exceed 10 pounds per square inch gauge (psig).

Appendix 2-S2. Schedule of Compliance

The permittee certified in the ROP application that this stationary source is in compliance with all applicable requirements and the permittee shall continue to comply with all terms and conditions of this ROP. A Schedule of Compliance is not required. **(R 336.1213(4)(a), R 336.1119(a)(ii))**

Appendix 3-S2. Monitoring Requirements

Specific monitoring requirement procedures, methods or specifications are detailed in Part A or the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, this appendix is not applicable.

Appendix 4-S2. Recordkeeping

Specific recordkeeping requirement formats and procedures are detailed in Part A or the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, this appendix is not applicable.

Appendix 5-S2. Testing Procedures

Specific testing requirement plans, procedures, and averaging times are detailed in the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, this appendix is not applicable.

Appendix 6-S2. Permits to Install

The following table lists any PTI and/or Permit to Operate (PTO) that relate to the identified emission units or flexible groups as of the effective date of this ROP. This includes all PTIs and/or PTOs that are hereby incorporated into Source-Wide PTI No. MI-PTI-N5814-2015. The PTIs issued after the effective date of this ROP, including amendments or modifications, will be identified in Appendix 6 upon renewal.

Permit to Install Number	Description of Equipment	Corresponding Emission Unit(s) or Flexible Group(s)
162-11A	Incorporate several changes to existing PTI No. 162-11, including administrative changes, removal of equipment, and incorporation of conditions related to 40 CFR, Part 63, Subparts A and EEEEE.	EU-SHELLCORE-S2, EU-SILOS-S2, EU-LAEMPE#1AND#2-S2, EU-MISCELLANEOUS-S2

Appendix 7-S2. Emission Calculations

Specific emission calculations to be used with monitoring, testing or recordkeeping data are detailed in the appropriate Source-Wide, Emission Unit and/or Flexible group Special Conditions. Therefore, this appendix is not applicable.

Appendix 8-S2. Reporting

A. Annual, Semiannual, and Deviation Certification Reporting

The permittee shall use the MDEQ, AQD, Report Certification form (EQP 5736) and MDEQ, AQD, Deviation Report form (EQP 5737) for the annual, semiannual and deviation certification reporting referenced in the Reporting Section of the Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Alternative formats must meet the provisions of Rule 213(4)(c) and Rule 213(3)(c)(i), respectively, and be approved by the AQD District Supervisor.

B. Other Reporting

Specific reporting requirement formats and procedures are detailed in Part A or the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, Part B of this appendix is not applicable.

MICHIGAN DEPARTMENT OF ENVIRONMENTAL QUALITY
AIR QUALITY DIVISION

EFFECTIVE DATE: July 8, 2015

ISSUED TO

BREMBO NORTH AMERICA, INC.

State Registration Number (SRN): N6226

LOCATED AT

29991 M-60 East, Homer, Michigan 49245

RENEWABLE OPERATING PERMIT

Permit Number: MI-ROP-N6226-2015

Expiration Date: July 8, 2020

Administratively Complete ROP Renewal Application Due Between
January 8, 2019 and January 8, 2020

This Renewable Operating Permit (ROP) is issued in accordance with and subject to Section 5506(3) of Part 55, Air Pollution Control, of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (Act 451). Pursuant to Michigan Air Pollution Control Rule 210(1), this ROP constitutes the permittee's authority to operate the stationary source identified above in accordance with the general conditions, special conditions and attachments contained herein. Operation of the stationary source and all emission units listed in the permit are subject to all applicable future or amended rules and regulations pursuant to Act 451 and the federal Clean Air Act.

SOURCE-WIDE PERMIT TO INSTALL

Permit Number: MI-PTI-N6226-2015

This Permit to Install (PTI) is issued in accordance with and subject to Section 5505(5) of Act 451. Pursuant to Michigan Air Pollution Control Rule 214a, the terms and conditions herein, identified by the underlying applicable requirement citation of Rule 201(1)(a), constitute a federally enforceable PTI. The PTI terms and conditions do not expire and remain in effect unless the criteria of Rule 201(6) are met. Operation of all emission units identified in the PTI is subject to all applicable future or amended rules and regulations pursuant to Act 451 and the federal Clean Air Act.

Michigan Department of Environmental Quality

Mary A. Douglas, Kalamazoo District Supervisor

AUTHORITY AND ENFORCEABILITY

For the purpose of this permit, the **permittee** is defined as any person who owns or operates an emission unit at a stationary source for which this permit has been issued. The **department** is defined in Rule 104(d) as the Director of the Michigan Department of Environmental Quality (MDEQ) or his or her designee.

The permittee shall comply with all specific details in the permit terms and conditions and the cited underlying applicable requirements. All terms and conditions in this ROP are both federally enforceable and state enforceable unless otherwise footnoted. Certain terms and conditions are applicable to most stationary sources for which an ROP has been issued. These general conditions are included in Part A of this ROP. Other terms and conditions may apply to a specific emission unit, several emission units which are represented as a flexible group, or the entire stationary source which is represented as a Source-Wide group. Special conditions are identified in Parts B, C, D and/or the appendices.

In accordance with Rule 213(2)(a), all underlying applicable requirements are identified for each ROP term or condition. All terms and conditions that are included in a PTI, are streamlined, subsumed and/or are state-only enforceable will be noted as such.

In accordance with Section 5507 of Act 451, the permittee has included in the ROP application a compliance certification, a schedule of compliance, and a compliance plan. For applicable requirements with which the source is in compliance, the source will continue to comply with these requirements. For applicable requirements with which the source is not in compliance, the source will comply with the detailed schedule of compliance requirements that are incorporated as an appendix in this ROP. Furthermore, for any applicable requirements effective after the date of issuance of this ROP, the stationary source will meet the requirements on a timely basis, unless the underlying applicable requirement requires a more detailed schedule of compliance.

Issuance of this permit does not obviate the necessity of obtaining such permits or approvals from other units of government as required by law.

A. GENERAL CONDITIONS

Permit Enforceability

- All conditions in this permit are both federally enforceable and state enforceable unless otherwise noted. **(R 336.1213(5))**

- Those conditions that are hereby incorporated in a state-only enforceable Source-Wide PTI pursuant to Rule 201(2)(d) are designated by footnote one. **(R 336.1213(5)(a), R 336.1214a(5))**

- Those conditions that are hereby incorporated in a federally enforceable Source-Wide PTI pursuant to Rule 201(2)(c) are designated by footnote two. **(R 336.1213(5)(b), R 336.1214a(3))**

General Provisions

1. The permittee shall comply with all conditions of this ROP. Any ROP noncompliance constitutes a violation of Act 451, and is grounds for enforcement action, for ROP revocation or revision, or for denial of the renewal of the ROP. All terms and conditions of this ROP that are designated as federally enforceable are enforceable by the Administrator of the United States Environmental Protection Agency (USEPA) and by citizens under the provisions of the federal Clean Air Act (CAA). Any terms and conditions based on applicable requirements which are designated as "state-only" are not enforceable by the USEPA or citizens pursuant to the CAA. **(R 336.1213(1)(a))**

2. It shall not be a defense for the permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this ROP. **(R 336.1213(1)(b))**

3. This ROP may be modified, revised, or revoked for cause. The filing of a request by the permittee for a permit modification, revision, or termination, or a notification of planned changes or anticipated noncompliance does not stay any ROP term or condition. This does not supersede or affect the ability of the permittee to make changes, at the permittee's own risk, pursuant to Rule 215 and Rule 216. **(R 336.1213(1)(c))**

4. The permittee shall allow the department, or an authorized representative of the department, upon presentation of credentials and other documents as may be required by law and upon stating the authority for and purpose of the investigation, to perform any of the following activities **(R 336.1213(1)(d))**:
   a. Enter, at reasonable times, a stationary source or other premises where emissions-related activity is conducted or where records must be kept under the conditions of the ROP.
   b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of the ROP.
   c. Inspect, at reasonable times, any of the following:
      i. Any stationary source.
      ii. Any emission unit.
      iii. Any equipment, including monitoring and air pollution control equipment.
      iv. Any work practices or operations regulated or required under the ROP.
   d. As authorized by Section 5526 of Act 451, sample or monitor at reasonable times substances or parameters for the purpose of assuring compliance with the ROP or applicable requirements.

5. The permittee shall furnish to the department, within a reasonable time, any information the department may request, in writing, to determine whether cause exists for modifying, revising, or revoking the ROP or to determine compliance with this ROP. Upon request, the permittee shall also furnish to the department copies of any records that are required to be kept as a term or condition of this ROP. For information which is claimed by the permittee to be confidential, consistent with the requirements of the 1976 PA 442, MCL §15.231 et seq., and known as the Freedom of Information Act, the person may also be required to furnish the records directly to the USEPA together with a claim of confidentiality. **(R 336.1213(1)(e))**

6. A challenge by any person, the Administrator of the USEPA, or the department to a particular condition or a part of this ROP shall not set aside, delay, stay, or in any way affect the applicability or enforceability of any other condition or part of this ROP. **(R 336.1213(1)(f))**

7. The permittee shall pay fees consistent with the fee schedule and requirements pursuant to Section 5522 of Act 451. **(R 336.1213(1)(g))**

8. This ROP does not convey any property rights or any exclusive privilege. **(R 336.1213(1)(h))**

Equipment & Design

9. Any collected air contaminants shall be removed as necessary to maintain the equipment at the required operating efficiency. The collection and disposal of air contaminants shall be performed in a manner so as to minimize the introduction of contaminants to the outer air. Transport of collected air contaminants in Priority I and II areas requires the use of material handling methods specified in Rule 370(2).[2] **(R 336.1370)**

10. Any air cleaning device shall be installed, maintained, and operated in a satisfactory manner and in accordance with the Michigan Air Pollution Control rules and existing law. **(R 336.1910)**

Emission Limits

11. Unless otherwise specified in this ROP, the permittee shall comply with Rule 301, which states, in part, "Except as provided in subrules 2, 3, and 4 of this rule, a person shall not cause or permit to be discharged into the outer air from a process or process equipment a visible emission of a density greater than the most stringent of the following":[2] **(R 336.1301(1))**:
    a. A 6-minute average of 20 percent opacity, except for one 6-minute average per hour of not more than 27 percent opacity.
    b. A limit specified by an applicable federal new source performance standard.

    The grading of visible emissions shall be determined in accordance with Rule 303.

12. The permittee shall not cause or permit the emission of an air contaminant or water vapor in quantities that cause, alone or in reaction with other air contaminants, either of the following:
    a. Injurious effects to human health or safety, animal life, plant life of significant economic value, or property.[1] **(R 336.1901(a))**
    b. Unreasonable interference with the comfortable enjoyment of life and property.[1] **(R 336.1901(b))**

Testing/Sampling

13. The department may require the owner or operator of any source of an air contaminant to conduct acceptable performance tests, at the owner's or operator's expense, in accordance with Rule 1001 and Rule 1003, under any of the conditions listed in Rule 1001(1).[2] **(R 336.2001)**

14. Any required performance testing shall be conducted in accordance with Rule 1001(2), Rule 1001(3) and Rule 1003. **(R 336.2001(2), R 336.2001(3), R 336.2003(1))**

15. Any required test results shall be submitted to the Air Quality Division (AQD) in the format prescribed by the applicable reference test method within 60 days following the last date of the test. **(R 336.2001(5))**

Monitoring/Recordkeeping

16. Records of any periodic emission or parametric monitoring required in this ROP shall include the following information specified in Rule 213(3)(b)(i), where appropriate **(R 336.1213(3)(b))**:
    a. The date, location, time, and method of sampling or measurements.
    b. The dates the analyses of the samples were performed.
    c. The company or entity that performed the analyses of the samples.

d. The analytical techniques or methods used.
e. The results of the analyses.
f. The related process operating conditions or parameters that existed at the time of sampling or measurement.

17. All required monitoring data, support information and all reports, including reports of all instances of deviation from permit requirements, shall be kept and furnished to the department upon request for a period of not less than 5 years from the date of the monitoring sample, measurement, report or application. Support information includes all calibration and maintenance records and all original strip-chart recordings, or other original data records, for continuous monitoring instrumentation and copies of all reports required by the ROP. **(R 336.1213(1)(e), R 336.1213(3)(b)(ii))**

Certification & Reporting

18. Except for the alternate certification schedule provided in Rule 213(3)(c)(iii)(B), any document required to be submitted to the department as a term or condition of this ROP shall contain an original certification by a Responsible Official which states that, based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete. **(R 336.1213(3)(c))**

19. A Responsible Official shall certify to the appropriate AQD District Office and to the USEPA that the stationary source is and has been in compliance with all terms and conditions contained in the ROP except for deviations that have been or are being reported to the appropriate AQD District Office pursuant to Rule 213(3)(c). This certification shall include all the information specified in Rule 213(4)(c)(i) through (v) and shall state that, based on information and belief formed after reasonable inquiry, the statements and information in the certification are true, accurate, and complete. The USEPA address is: USEPA, Air Compliance Data - Michigan, Air and Radiation Division, 77 West Jackson Boulevard, Chicago, Illinois 60604. **(R 336.1213(4)(c))**

20. The certification of compliance shall be submitted annually for the term of this ROP as detailed in the special conditions, or more frequently if specified in an applicable requirement or in this ROP. **(R 336.1213(4)(c))**

21. The permittee shall promptly report any deviations from ROP requirements and certify the reports. The prompt reporting of deviations from ROP requirements is defined in Rule 213(3)(c)(ii) as follows, unless otherwise described in this ROP **(R 336.1213(3)(c))**:
    a. For deviations that exceed the emissions allowed under the ROP, prompt reporting means reporting consistent with the requirements of Rule 912 as detailed in Condition 25. All reports submitted pursuant to this paragraph shall be promptly certified as specified in Rule 213(3)(c)(iii).
    b. For deviations which exceed the emissions allowed under the ROP and which are not reported pursuant to Rule 912 due to the duration of the deviation, prompt reporting means the reporting of all deviations in the semiannual reports required by Rule 213(3)(c)(i). The report shall describe reasons for each deviation and the actions taken to minimize or correct each deviation.
    c. For deviations that do not exceed the emissions allowed under the ROP, prompt reporting means the reporting of all deviations in the semiannual reports required by Rule 213(3)(c)(i). The report shall describe the reasons for each deviation and the actions taken to minimize or correct each deviation.

22. For reports required pursuant to Rule 213(3)(c)(ii), prompt certification of the reports is described in Rule 213(3)(c)(iii) as either of the following **(R 336.1213(3)(c))**:
    a. Submitting a certification by a Responsible Official with each report which states that, based on information and belief formed after reasonable inquiry, the statements and information in the report are true, accurate, and complete.
    b. Submitting, within 30 days following the end of a calendar month during which one or more prompt reports of deviations from the emissions allowed under the ROP were submitted to the department pursuant to Rule 213(3)(c)(ii), a certification by a Responsible Official which states that, “based on information and belief formed after reasonable inquiry, the statements and information contained in each of the reports submitted during the previous month were true, accurate, and complete”. The certification shall include a listing of the reports that are being certified. Any report submitted pursuant to Rule 213(3)(c)(ii) that will be certified on a monthly basis pursuant to this paragraph shall include a statement that certification of the report will be provided within 30 days following the end of the calendar month.

23. Semiannually for the term of the ROP as detailed in the special conditions, or more frequently if specified, the permittee shall submit certified reports of any required monitoring to the appropriate AQD District Office. All instances of deviations from ROP requirements during the reporting period shall be clearly identified in the reports. **(R 336.1213(3)(c)(i))**

24. On an annual basis, the permittee shall report the actual emissions, or the information necessary to determine the actual emissions, of each regulated air pollutant as defined in Rule 212(6) for each emission unit utilizing the emissions inventory forms provided by the department. **(R 336.1212(6))**

25. The permittee shall provide notice of an abnormal condition, start-up, shutdown, or malfunction that results in emissions of a hazardous or toxic air pollutant which continue for more than one hour in excess of any applicable standard or limitation, or emissions of any air contaminant continuing for more than two hours in excess of an applicable standard or limitation, as required in Rule 912, to the appropriate AQD District Office. The notice shall be provided not later than two business days after the start-up, shutdown, or discovery of the abnormal conditions or malfunction. Notice shall be by any reasonable means, including electronic, telephonic, or oral communication. Written reports, if required under Rule 912, must be submitted to the appropriate AQD District Supervisor within 10 days after the start-up or shutdown occurred, within 10 days after the abnormal conditions or malfunction has been corrected, or within 30 days of discovery of the abnormal conditions or malfunction, whichever is first. The written reports shall include all of the information required in Rule 912(5) and shall be certified by a Responsible Official in a manner consistent with the CAA.[2] **(R 336.1912)**

Permit Shield

26. Compliance with the conditions of the ROP shall be considered compliance with any applicable requirements as of the date of ROP issuance, if either of the following provisions is satisfied **(R 336.1213(6)(a)(i), R 336.1213(6)(a)(ii))**:
    a. The applicable requirements are included and are specifically identified in the ROP.
    b. The permit includes a determination or concise summary of the determination by the department that other specifically identified requirements are not applicable to the stationary source.

    Any requirements identified in Part E of this ROP have been identified as non-applicable to this ROP and are included in the permit shield.

27. Nothing in this ROP shall alter or affect any of the following:
    a. The provisions of Section 303 of the CAA, emergency orders, including the authority of the USEPA under Section 303 of the CAA. **(R 336.1213(6)(b)(i))**
    b. The liability of the owner or operator of this source for any violation of applicable requirements prior to or at the time of this ROP issuance. **(R 336.1213(6)(b)(ii))**
    c. The applicable requirements of the acid rain program, consistent with Section 408(a) of the CAA. **(R 336.1213(6)(b)(iii))**
    d. The ability of the USEPA to obtain information from a source pursuant to Section 114 of the CAA. **(R 336.1213(6)(b)(iv))**

28. The permit shield shall not apply to provisions incorporated into this ROP through procedures for any of the following:
    a. Operational flexibility changes made pursuant to Rule 215. **(R 336.1215(5))**
    b. Administrative Amendments made pursuant to Rule 216(1)(a)(i)-(iv). **(R 336.1216(1)(b)(iii))**
    c. Administrative Amendments made pursuant to Rule 216(1)(a)(v) until the amendment has been approved by the department. **(R 336.1216(1)(c)(iii))**
    d. Minor Permit Modifications made pursuant to Rule 216(2). **(R 336.1216(2)(f))**
    e. State-Only Modifications made pursuant to Rule 216(4) until the changes have been approved by the department. **(R 336.1216(4)(e))**

29. Expiration of this ROP results in the loss of the permit shield. If a timely and administratively complete application for renewal is submitted not more than 18 months, but not less than 6 months, before the expiration date of the ROP, but the department fails to take final action before the end of the ROP term, the existing ROP

does not expire until the renewal is issued or denied, and the permit shield shall extend beyond the original ROP term until the department takes final action. **(R 336.1217(1)(c), R 336.1217(1)(a))**

Revisions

30. For changes to any process or process equipment covered by this ROP that do not require a revision of the ROP pursuant to Rule 216, the permittee must comply with Rule 215. **(R 336.1215, R 336.1216)**

31. A change in ownership or operational control of a stationary source covered by this ROP shall be made pursuant to Rule 216(1). **(R 336.1219(2))**

32. For revisions to this ROP, an administratively complete application shall be considered timely if it is received by the department in accordance with the time frames specified in Rule 216. **(R 336.1210(10))**

33. Pursuant to Rule 216(1)(b)(iii), Rule 216(2)(d) and Rule 216(4)(d), after a change has been made, and until the department takes final action, the permittee shall comply with both the applicable requirements governing the change and the ROP terms and conditions proposed in the application for the modification. During this time period, the permittee may choose to not comply with the existing ROP terms and conditions that the application seeks to change. However, if the permittee fails to comply with the ROP terms and conditions proposed in the application during this time period, the terms and conditions in the ROP are enforceable. **(R 336.1216(1)(c)(iii), R 336.1216(2)(d), R 336.1216(4)(d))**

Reopenings

34. A ROP shall be reopened by the department prior to the expiration date and revised by the department under any of the following circumstances:
    a. If additional requirements become applicable to this stationary source with three or more years remaining in the term of the ROP, but not if the effective date of the new applicable requirement is later than the ROP expiration date. **(R 336.1217(2)(a)(i))**
    b. If additional requirements pursuant to Title IV of the CAA become applicable to this stationary source. **(R 336.1217(2)(a)(ii))**
    c. If the department determines that the ROP contains a material mistake, information required by any applicable requirement was omitted, or inaccurate statements were made in establishing emission limits or the terms or conditions of the ROP. **(R 336.1217(2)(a)(iii))**
    d. If the department determines that the ROP must be revised to ensure compliance with the applicable requirements. **(R 336.1217(2)(a)(iv))**

Renewals

35. For renewal of this ROP, an administratively complete application shall be considered timely if it is received by the department not more than 18 months, but not less than 6 months, before the expiration date of the ROP. **(R 336.1210(8))**

Stratospheric Ozone Protection

36. If the permittee is subject to Title 40 of the CFR Part 82 and services, maintains, or repairs appliances except for motor vehicle air conditioners (MVAC), or disposes of appliances containing refrigerant, including MVAC and small appliances, or if the permittee is a refrigerant reclaimer, appliance owner or a manufacturer of appliances or recycling and recovery equipment, the permittee shall comply with all applicable standards for recycling and emissions reduction pursuant to 40 CFR Part 82Subpart F.

37. If the permittee is subject to 40 CFR Part 82, and performs a service on motor (fleet) vehicles when this service involves refrigerant in the MVAC, the permittee is subject to all the applicable requirements as specified in 40 CFR Part 82, Subpart B, Servicing of Motor Vehicle Air Conditioners. The term “motor vehicle” as used in Subpart B does not include a vehicle in which final assembly of the vehicle has not been completed by the original equipment manufacturer. The term MVAC as used in Subpart B does not include the air-tight sealed

refrigeration system used for refrigerated cargo or an air conditioning system on passenger buses using Hydrochlorofluorocarbon-22 refrigerant.

Risk Management Plan

38. If subject to Section 112(r) of the CAA and 40 CFR Part 68, the permittee shall register and submit to the USEPA the required data related to the risk management plan for reducing the probability of accidental releases of any regulated substances listed pursuant to Section 112(r)(3) of the CAA as amended in 40 CFR Part 68.130. The list of substances, threshold quantities, and accident prevention regulations promulgated under 40 CFR Part 68, do not limit in any way the general duty provisions under Section 112(r)(1).

39. If subject to Section 112(r) of the CAA and 40 CFR Part 68, the permittee shall comply with the requirements of 40 CFR Part 68, no later than the latest of the following dates as provided in 40 CFR 68.10(a):
    a. June 21, 1999,
    b. Three years after the date on which a regulated substance is first listed under 40 CFR 68.130, or
    c. The date on which a regulated substance is first present above a threshold quantity in a process.

40. If subject to Section 112(r) of the CAA and 40 CFR Part 68, the permittee shall submit any additional relevant information requested by any regulatory agency necessary to ensure compliance with the requirements of 40 CFR Part 68.

41. If subject to Section 112(r) of the CAA and 40 CFR Part 68, the permittee shall annually certify compliance with all applicable requirements of Section 112(r) as detailed in Rule 213(4)(c)). **(40 CFR Part 68)**

Emission Trading

42. Emission averaging and emission reduction credit trading are allowed pursuant to any applicable interstate or regional emission trading program that has been approved by the Administrator of the USEPA as a part of Michigan's State Implementation Plan. Such activities must comply with Rule 215 and Rule 216. **(R 336.1213(12))**

Permit To Install (PTI)

43. The process or process equipment included in this permit shall not be reconstructed, relocated, or modified unless a PTI authorizing such action is issued by the department, except to the extent such action is exempt from the PTI requirements by any applicable rule.[2] **(R 336.1201(1))**

44. The department may, after notice and opportunity for a hearing, revoke PTI terms or conditions if evidence indicates the process or process equipment is not performing in accordance with the terms and conditions of the PTI or is violating the department's rules or the CAA.[2] **(R 336.1201(8) Section 5510 of Act 451))**

45. The terms and conditions of a PTI shall apply to any person or legal entity that now or hereafter owns or operates the process or process equipment at the location authorized by the PTI. If a new owner or operator submits a written request to the department pursuant to Rule 219 and the department approves the request, this PTI will be amended to reflect the change of ownership or operational control. The request must include all of the information required by Subrules (1)(a), (b) and (c) of Rule 219. The written request shall be sent to the appropriate AQD District Supervisor, MDEQ.[2] **(R 336.1219)**

46. If the installation, reconstruction, relocation, or modification of the equipment for which PTI terms and conditions have been approved has not commenced within 18 months of the original PTI issuance date, or has been interrupted for 18 months, the applicable terms and conditions from that PTI, as incorporated into the ROP, shall become void unless otherwise authorized by the department. Furthermore, the person to whom that PTI was issued, or the designated authorized agent, shall notify the department via the Supervisor, Permit Section, MDEQ, AQD, P.O. Box 30260, Lansing, Michigan 48909, if it is decided not to pursue the installation, reconstruction, relocation, or modification of the equipment allowed by the terms and conditions from that PTI.[2] **(R 336.1201(4))**

Footnotes:

[1]This condition is state-only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

B. SOURCE-WIDE CONDITIONS

Part B outlines the Source-Wide Terms and Conditions that apply to this stationary source. The permittee is subject to these special conditions for the stationary source in addition to the general conditions in Part A and any other terms and conditions contained in this ROP.

The permittee shall comply with all specific details in the special conditions and the underlying applicable requirements cited. If a specific condition type does not apply to this source, NA (not applicable) has been used in the table. If there are no Source-Wide Conditions, this section will be left blank.

C. EMISSION UNIT CONDITIONS

Part C outlines terms and conditions that are specific to individual emission units listed in the Emission Unit Summary Table. The permittee is subject to the special conditions for each emission unit in addition to the General Conditions in Part A and any other terms and conditions contained in this ROP.

The permittee shall comply with all specific details in the special conditions and the underlying applicable requirements cited. If a specific condition type does not apply, NA (not applicable) has been used in the table. If there are no conditions specific to individual emission units, this section will be left blank.

EMISSION UNIT SUMMARY TABLE

D. FLEXIBLE GROUP CONDITIONS

Part D outlines the terms and conditions that apply to more than one emission unit. The permittee is subject to the special conditions for each flexible group in addition to the General Conditions in Part A and any other terms and conditions contained in this ROP.

The permittee shall comply with all specific details in the special conditions and the underlying applicable requirements cited. If a specific condition type does not apply, NA (not applicable) has been used in the table. If there are no special conditions that apply to more than one emission unit, this section will be left blank.

FG-GeoMet
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

Two automotive metal surface coating lines.

Emission Units: EU-GeoMet-01, EU-GeoMet-02

POLLUTION CONTROL EQUIPMENT

Dry filters are used to collect any overspray from the coating process.

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. VOCs	2,000 pounds per month[2]	Calendar month	Each EU of FG-GeoMet	SC VI.1 through SC VI.3	**R 336.1702(d)**
2. VOCs	9.7 tpy[2]	12-month rolling time period as determined at the end of each calendar month	FG-GeoMet	SC VI.1 through SC VI.3	**R 336.1702(d)**

II. MATERIAL LIMIT(S)

NA

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall capture all waste coatings, cleanup and purge solvents (materials) and shall store them in closed containers. The permittee shall dispose of all waste materials in an acceptable manner in compliance with all applicable state rules and federal regulations.[2] **(R 336.1702(a))**

2. The permittee shall dispose of spent filters in a manner which minimizes the introduction of air contaminants to the outer air.[2] **(R 336.1224, R 336.1370)**

3. The permittee shall handle all VOC and / or HAP containing materials, including coatings, reducers, solvents and thinners, in a manner to minimize the generation of fugitive emissions. The permittee shall keep containers covered at all times except when operator access is necessary.[2] **(R 336.1205, R 336.1225, R 336.1702(a))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate FG-GeoMet unless all respective exhaust filters are installed, maintained and operated in a satisfactory manner.[2] **(R 336.1224, R 336.1301, R 336.1910)**

2. The permittee shall equip and maintain FG-GeoMet with HVLP applicators or comparable technology with equivalent transfer efficiency. For HVLP applicators, the permittee shall keep test caps available for pressure testing.[2] **(R 336.1702(a))**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall determine the VOC content, water content and density of any coating, as applied and as received, using federal Reference Test Method 24. Upon prior written approval by the AQD District Supervisor, the permittee may determine the VOC content from manufacturer's formulation data. If the Method 24 and the formulation values should differ, the permittee shall use the Method 24 results to determine compliance.[2] **(R 336.1702, R 336.2001, R 336.2003, R 336.2004, R 336.2040(5))**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall complete all required calculations in a format acceptable to the AQD District Supervisor by the 15th day of the calendar month, for the previous calendar month, unless otherwise specified in any monitoring/recordkeeping special condition.[2] **(R 336.1225, R 336.1702)**

2. The permittee shall maintain a current listing from the manufacturer of the chemical composition of each coating, cleanup and purge solvents, including the weight percent of each component. The data may consist of Material Safety Data Sheets, manufacturer's formulation data, or both as deemed acceptable by the AQD District Supervisor. The permittee shall keep all records on file and make them available to the Department upon request.[2] **(R 336.1225, R 336.1702)**

3. The permittee shall keep the following information on a calendar day basis for FG-GeoMet:
   a. Gallons (with water) of each coating, cleanup and purge solvents (material) used and reclaimed.
   b. VOC content (with water) of each material as applied.
   c. VOC mass emission calculations determining the monthly emission rate in pounds per calendar month for each EU of FG-GeoMet.
   d. VOC mass emission calculations determining the annual emission rate in tons per 12-month rolling time period as determined at the end of each calendar month for FG-GeoMet.

   The permittee shall keep the records in a format acceptable to the AQD District Supervisor and make them available to the Department upon request.[2] **(R 336.1702(d))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SV-GeoMet-01 (Paint Booth - SV0042)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
2. SV-GeoMet-02 (Paint Booth - SV0043)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
3. SV-GeoMet-03 (Cure Station - SV0045)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
4. SV-GeoMetII-01 (Paint Booth - SV0053)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
5. SV-GeoMetII-02 (Paint Booth - SV0054)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
6. SV-GeoMetII-03 (Cure Station - SV0056)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable provisions of the National Emission Standards for Hazardous Air Pollutants, as specified in 40 CFR Part 63, Subpart A and Subpart MMMM for Surface Coating of Miscellaneous Metal Parts and Products.[2] **(40 CFR Part 63 Subparts A and MMMM)**

Footnotes:
[1] This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2] This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

FG-Magni&Black
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

Six automotive metal surface coating lines.

Emission Units: EU-Black, EU-Magni-01, EU-Magni-02, EU-Magni-03, EU-Magni-04, EU-Magni-05

POLLUTION CONTROL EQUIPMENT

Dry filters are used to collect any overspray from the coating process.

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. VOCs	9.4 tpy[2]	12-month rolling time period as determined at the end of each calendar month	FG-Magni&Black	SC VI.2 SC VI.3	**R 336.1702(a)**

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. VOCs	3.5 lb/gal (minus water)[a] as applied[2]	Instantaneous	FG-Magni&Black	SC V.1	**R 336.1702(a)**

[a] The phrase "minus water" shall also include compounds which are used as organic solvents and which are excluded from the definition of volatile organic compound. **(R 336.1602(4))**

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall capture all waste coatings, cleanup and purge solvents (materials) and shall store them in closed containers. The permittee shall dispose of all waste materials in an acceptable manner in compliance with all applicable state rules and federal regulations.[2] **(R 336.1702(a))**

2. The permittee shall dispose of spent filters in a manner which minimizes the introduction of air contaminants to the outer air.[2] **(R 336.1224, R 336.1370)**

3. The permittee shall handle all VOC and / or HAP containing materials, including coatings, reducers, solvents and thinners, in a manner to minimize the generation of fugitive emissions. The permittee shall keep containers covered at all times except when operator access is necessary.[2] **(R 336.1205, R 336.1225, R 336.1702(a))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate FG-Magni&Black unless all respective exhaust filters are installed, maintained and operated in a satisfactory manner.[2] **(R 336.1224, R 336.1301, R 336.1910)**

2. The permittee shall equip and maintain FG-Magni&Black with HVLP applicators or comparable technology with equivalent transfer efficiency. For HVLP applicators, the permittee shall keep test caps available for pressure testing.[2] **(R 336.1702(a))**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall determine the VOC content, water content and density of any coating, as applied and as received, using federal Reference Test Method 24. Upon prior written approval by the AQD District Supervisor, the permittee may determine the VOC content from manufacturer's formulation data. If the Method 24 and the formulation values should differ, the permittee shall use the Method 24 results to determine compliance.[2] **(R 336.1702, R 336.2001, R 336.2003, R 336.2004, R 336.2040(5))**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall complete all required calculations in a format acceptable to the AQD District Supervisor by the 15th day of the calendar month, for the previous calendar month, unless otherwise specified in any monitoring/recordkeeping special condition.[2] **(R 336.1225, R 336.1702)**

2. The permittee shall maintain a current listing from the manufacturer of the chemical composition of each coating, cleanup and purge solvents, including the weight percent of each component. The data may consist of Material Safety Data Sheets, manufacturer's formulation data, or both as deemed acceptable by the AQD District Supervisor. The permittee shall keep all records on file and make them available to the Department upon request.[2] **(R 336.1225, R 336.1702)**

3. The permittee shall keep the following information on a calendar month basis for FG-Magni&Black:
   a. Gallons (with water) of each coating, cleanup and purge solvents (material) used and reclaimed.
   b. VOC content (minus water and with water) of each material as applied.
   c. VOC mass emission calculations determining the monthly emission rate in tons per calendar month.
   d. VOC mass emission calculations determining the annual emission rate in tons per 12-month rolling time period as determined at the end of each calendar month.

   The permittee shall keep the records in a format acceptable to the AQD District Supervisor and make them available to the Department upon request.[2] **(R 336.1702(a))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SV-SprimagBlack (Exhaust - SV0021)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
2. SV-Magni-01 (Exhaust - SV0052)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
3. SV-Magni-02 (Exhaust - SV0060)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
4. SV-Magni-03 (Exhaust - SV0063)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
5. SV-Magni-04 (Exhaust - SV0064)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
6. SV-Magni-05 (Exhaust - SV0065)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable provisions of the National Emission Standards for Hazardous Air Pollutants, as specified in 40 CFR Part 63, Subpart A and Subpart MMMM for Surface Coating of Miscellaneous Metal Parts and Products.[2] **(40 CFR Part 63 Subparts A and MMMM)**

Footnotes:
[1] This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2] This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

FG-Zinc
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

Five automotive metal surface coating lines.

Emission Units: EU-Zinc-01, EU-Zinc-02, EU-Zinc-03, EU-Zinc-04, EU-Zinc-05-Blechtopf

POLLUTION CONTROL EQUIPMENT

Dry filters are used to collect any overspray from the coating process.

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. VOCs	43.5 tpy[2]	12-month rolling time period as determined at the end of each calendar month	FG-Zinc	SC VI.2 SC VI.3	**R 336.1702(a)**
2. Xylene (CAS No. 1330-20-7)	103.5 pounds per day[1]	Calendar day	FG-Zinc	SC VI.2 SC VI.4	**R 336.1225(1)**

II. MATERIAL LIMIT(S)

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. VOCs	3.5 lb/gal (minus water)[a] as applied[2]	Instantaneous	FG-Zinc	SC V.1	**R 336.1702(a)**

[a] The phrase "minus water" shall also include compounds which are used as organic solvents and which are excluded from the definition of volatile organic compound. **(R 336.1602(4))**

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall capture all waste coatings, cleanup and purge solvents (materials) and shall store them in closed containers. The permittee shall dispose of all waste materials in an acceptable manner in compliance with all applicable state rules and federal regulations.[2] **(R 336.1702(a))**

2. The permittee shall dispose of spent filters in a manner which minimizes the introduction of air contaminants to the outer air.[2] **(R 336.1224, R 336.1370)**

3. The permittee shall handle all VOC and / or HAP containing materials, including coatings, reducers, solvents and thinners, in a manner to minimize the generation of fugitive emissions. The permittee shall keep containers covered at all times except when operator access is necessary.[2] **(R 336.1205, R 336.1225, R 336.1702(a))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The permittee shall not operate FG-Zinc unless all respective exhaust filters are installed, maintained and operated in a satisfactory manner.[2] **(R 336.1224, R 336.1301, R 336.1910)**

2. The permittee shall equip and maintain FG-Zinc with HVLP applicators or comparable technology with equivalent transfer efficiency. For HVLP applicators, the permittee shall keep test caps available for pressure testing.[2] **(R 336.1702(a))**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall determine the VOC content, water content and density of any coating, as applied and as received, using federal Reference Test Method 24. Upon prior written approval by the AQD District Supervisor, the permittee may determine the VOC content from manufacturer's formulation data. If the Method 24 and the formulation values should differ, the permittee shall use the Method 24 results to determine compliance.[2] **(R 336.1702, R 336.2001, R 336.2003, R 336.2004, R 336.2040(5))**

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall complete all required calculations in a format acceptable to the AQD District Supervisor by the 15th day of the calendar month, for the previous calendar month, unless otherwise specified in any monitoring/recordkeeping special condition.[2] **(R 336.1225, R 336.1702)**

2. The permittee shall maintain a current listing from the manufacturer of the chemical composition of each coating, cleanup and purge solvents, including the weight percent of each component. The data may consist of Material Safety Data Sheets, manufacturer's formulation data, or both as deemed acceptable by the AQD District Supervisor. The permittee shall keep all records on file and make them available to the Department upon request.[2] **(R 336.1225, R 336.1702)**

3. The permittee shall keep the following information on a calendar month basis for FG-Zinc:
   a. Gallons (with water) of each coating, cleanup and purge solvents (material) used and reclaimed.
   b. VOC content (minus water and with water) of each material as applied.
   c. VOC mass emission calculations determining the monthly emission rate in tons per calendar month.
   d. VOC mass emission calculations determining the annual emission rate in tons per 12-month rolling time period as determined at the end of each calendar month.

   The permittee shall keep the records in a format acceptable to the AQD District Supervisor and make them available to the Department upon request.[2] **(R 336.1702(a))**

4. The permittee shall keep the following information on a calendar day basis for FG-Zinc:
   a. Gallons of each xylene (CAS No. 1330-20-7) containing material used and reclaimed.
   b. The xylene (CAS No. 1330-20-7) content in pounds per gallon of each material used.
   c. Xylene (CAS No. 1330-20-7) mass emission calculations determining the daily emission rate in pounds per calendar day.

   The permittee shall keep the records in a format acceptable to the AQD District Supervisor and make them available to the Department upon request.[1] **(R 336.1225(1))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
1. SV-Zinc-01 (Exhaust - SV0026)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
2. SV-SprimagZinc-01 (Spray Station - SV0022)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
3. SV-SprimagZinc-02 (Flash Off - SV0023)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
4. SV-SprimagZinc-03 (Cooling Zone - SV0025)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
5. SV-BrentroZinc-01 (Exhaust - SV0048)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
6. SV-BrentroZinc-02 (Exhaust - SV0059)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
7. SV-Blechtopf-01 (Spray Station - SV0061)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**
8. SV-Blechtopf-02 (Drying Area - SV0062)	20^2	40^2	**R 336.1225, 40 CFR 52.21(c) & (d)**

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable provisions of the National Emission Standards for Hazardous Air Pollutants, as specified in 40 CFR Part 63, Subpart A and Subpart MMMM for Surface Coating of Miscellaneous Metal Parts and Products.[2] **(40 CFR Part 63 Subparts A and MMMM)**

Footnotes:
[1] This condition is state only enforceable and was established pursuant to Rule 201(1)(b).
[2] This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

FG-MISCMETAL
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

All metal parts coating lines operating per the requirements of R 336.1621(10)(b), including equipment covered by other permits and exempt equipment.

Emission Units: EU-GeoMet-01, EU-GeoMet-02

POLLUTION CONTROL EQUIPMENT

Dry filters are used to collect any overspray from the coating process.

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. VOC	Less than 30.0 tpy[2]	12-month rolling time period as determined at the end of each calendar month	All metal parts coating lines operating per the requirements of R 336.1621(10)(b).	SC VI.2 SC VI.3	**R 336.1702(d)**

FG-MACT MMMM
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

Each new, reconstructed, and existing affected source described in 40 CFR 63.3881(a)(1), including the subcategories listed in 40 CFR, Part 63, Subpart MMMM, 63.3881(a)(2) through (6), meeting the applicability requirements of 40 CFR 63.3881(b), which is engaged in the surface coating of miscellaneous metal parts and products. The affected source includes the collection of all the items listed in 40 CFR 63.3882(b)(1) through (4). Surface coating is defined by 40 CFR 63.3881 as the application of coating to a substrate using, for example, spray guns or dip tanks. Surface coating also includes associated activities, such as surface preparation, cleaning, mixing, and storage if they are directly related to the application of the coating. 40 CFR, Part 63, Subpart MMMM, does not apply to surface coating or a coating operation that meets any of the criteria of 40 CFR 63.3881(c)(1) through (17).

Emission Units: EU-GeoMet-01, EU-GeoMet-02, EU-Black, EU-Magni-01, EU-Magni-02, EU-Magni-03, EU-Magni-04, EU-Magni-05, EU-Zinc-01, EU-Zinc-02, EU-Zinc-03, EU-Zinc-04, EU-Zinc-05-Blechtopf

POLLUTION CONTROL EQUIPMENT

Dry filters are used to collect any overspray from the coating process.

I. EMISSION LIMIT(S)

Pollutant	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Organic HAP	2.6 lb/gal of coating solids[2]	12-month rolling time period as determined at the end of each calendar month	Existing – General Use Coating	SC VI.1 through SC VI.5	**40 CFR 63.3890(b)(1)**

II. MATERIAL LIMIT(S)

For the compliant materials option, the permittee shall meet the material limits specified in the following table.

Material	Limit	Time Period/ Operating Scenario	Equipment	Monitoring/ Testing Method	Underlying Applicable Requirements
1. Each Thinner and/or Additive	No Organic HAP[2] *	Instantaneous	Each Coating Operation using Compliant Material Option	SC VI.1 through SC VI.5	**40 CFR 63.3891(a)**
2. Each Cleaning Material	No Organic HAP[2] *	Instantaneous	Each Coating Operation using Compliant Material Option	SC VI.1 through SC VI.5	**40 CFR 63.3891(a)**
* Determined according to 40 CFR 63.3941(a).					

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. The permittee shall determine whether the organic HAP emission rate is equal to or less than the applicable emission limits in 40 CFR 63.3890 using at least one of the following three options, which are listed in 40 CFR 63.3891(a) through (c):
   a. Compliant material option,
   b. Emission rate without add-on controls option, or
   c. Emission rate with add-on controls option.

The permittee shall include all coatings, thinners, and/or other additives, and cleaning materials used when determining the emission rate.[2] **(40 CFR 63.3891)**

2. Any coating operation(s) using the compliant material option or the emission rate without add-on controls option, shall be in compliance with the applicable emission limits in 40 CFR 63.3890 at all times.[2] **(40 CFR 63.3900(a)(1))**

3. If the surface coating operation(s) meet the applicability criteria of more than one of the subcategory emission limits specified in 40 CFR 63.3890(a) or (b), the permittee may comply separately with each subcategory emission limit, or comply using one of the alternatives in 40 CFR 63.3890(c)(1) or (2).[2] **(40 CFR 63.3890(c))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

NA

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

NA

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. The permittee shall conduct an initial compliance demonstration for the initial compliance period according to the requirements in 40 CFR 63.3941, 40 CFR 63.3951, or 40 CFR 63.3961. The initial compliance period begins on the applicable compliance date specified in 40 CFR 63.3883 and ends on the last day of the 12th month following the compliance date. If the compliance date occurs on any day other than the first of the month, then the compliance period extends through that month plus the next 12 months.[2] **(40 CFR 63.3940, 40 CFR 63.3950, 40 CFR 63.3960)**

2. The permittee shall keep all records required by 40 CFR 63.3930 in the format and timeframes outlined in 40 CFR 63.3931.[2] **(40 CFR 63.3942(d), 40 CFR 63.3952(d), 40 CFR 63.3963(j))**

3. The permittee shall maintain, at a minimum, the following records for each compliance period[2]:
   a. A copy of each notification and report that is submitted to comply with Subpart MMMM, and the documentation supporting each notification and report. **(40 CFR 63.3930(a))**
   b. A current copy of information provided by materials suppliers or manufacturers, such as manufacturer's formulation data, or test data used to determine the mass fraction of organic HAP and density of each coating, thinner and/or other additive, and cleaning material, and the volume fraction of coating solids for each coating. **(40 CFR 63.3930(b))**
   c. A list of the coating operations on which each compliance option was used, and the beginning and ending dates and times for each compliance option used. **(40 CFR 63.3930(c)(1))**
   d. For the compliant materials option, the calculation of the organic HAP content for each coating, using Equation 2 of 40 CFR 63.3941. **(40 CFR 63.3930(c)(2))**
   e. For the emission rate without add-on controls option, the calculation of the total mass of organic HAP emissions for the coatings, thinners and/or additives, and cleaning materials used each month using Equations 1, 1A through 1C and 2 of 40 CFR 63.3951; and, if applicable, the calculation used to determine mass of organic HAP in waste materials according to 40 CFR 63.3951(e)(4); the calculation of the total volume of coating solids used each month using Equation 2 of 40 CFR 63.3951; and the calculation of each 12-month organic HAP emission rate using Equation 3 of 40 CFR 63.3951. **(40 CFR 63.3930(c)(3))**
   f. The name and mass or volume of each coating, thinner and/or other additive, and cleaning material used during each compliance period. If the compliant material option is used for all coatings at the affected source, the permittee may maintain purchase records for each material used rather than a record of the volume used. **(40 CFR 63.3930(d))**
   g. The mass fraction of organic HAP for each coating, thinner and/or additive, and cleaning material used during each compliance period unless the material is tracked by weight. **(40 CFR 63.3930(e))**

h. The volume fraction of coating solids for each coating used during each compliance period. **(40 CFR 63.3930(f))**

i. The density of for each coating, thinner and/or other additive, and cleaning material used during each compliance period. **(40 CFR 63.3930(g))**

j. The information specified in 40 CFR 63.3930(h)(1) through (3), if an allowance is used in Equation 1 of 40 CFR 63.3951 for organic HAP contained in waste materials sent to or designated for shipment to a treatment, storage, and disposal facility (TSDF) according to 40 CFR 63.3951(e)(4). **(40 CFR 63.3930(h))**

k. The date, time, and duration of each deviation. **(40 CFR 63.3930(j))**

4. For each coating used for the compliant coating option, the permittee shall demonstrate continuous compliance with the emission limit in 40 CFR 63.3890, for each compliance period, using Equation 2 of 40 CFR 63.3941. For each thinner and cleaning material used, the permittee shall determine continuous compliance according to 40 CFR 63.3941(a).[2] **(40 CFR 63.3942)**

5. For any coating operation or group of coating operations using the emission rate without add-on controls option, the permittee shall demonstrate continuous compliance with the applicable organic HAP emission limit in 40 CFR 63.3890, for each compliance period, according to 40 CFR 63.3951(a) through (g).[2] **(40 CFR 63.3952)**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

4. For the compliant material option, if any coating used for any 12-month compliance period exceeds the applicable emission limit specified in 40 CFR 63.3890; or any thinner or cleaning material used contains any organic HAP, the permittee shall report this as a deviation as specified in 40 CFR 63.3910(c)(6) and 40 CFR 63.3920(a)(5).[2] **(40 CFR 63.3942(b))**

5. For the emission rate without add-on controls, if the organic HAP emission rate for any 12-month compliance period exceeds the applicable emission limit specified in 40 CFR 63.3890, the permittee shall report this as a deviation as specified in 40 CFR 63.3910(c)(6) and 40 CFR 63.3920(a)(6).[2] **(40 CFR 63.3952(b))**

6. The Permittee shall submit the applicable notifications specified in 40 CFR 63.7(b) and (c), 63.8(f)(4) and 63.9(b) through (e) and (h), an initial notification and a notification of compliance status as specified in 40 CFR 63.3910.[2] **(40 CFR Part 63 Subparts A and MMMM)**

7. The permittee shall submit all semiannual compliance reports specified in 40 CFR 63.3920(a). Each semiannual compliance report shall identify which coating operation(s) used each compliance option, and if there were no deviations from the emission limitations in 40 CFR 63.3890, include a statement that the coating operations were in compliance.[2] **(40 CFR 63.3920, 40 CFR 63.3942(c), 40 CFR 63.3952(c), 40 CFR 63.3963(f))**

See Appendix 8

VIII. STACK/VENT RESTRICTION(S)

The exhaust gases from the stacks listed in the table below shall be discharged unobstructed vertically upwards to the ambient air unless otherwise noted:

Stack & Vent ID	Maximum Exhaust Dimensions (inches)	Minimum Height Above Ground (feet)	Underlying Applicable Requirements
NA	NA	NA	NA

IX. OTHER REQUIREMENT(S)

1. The permittee shall comply with all applicable provisions of the National Emission Standards for Hazardous Air Pollutants, as specified in 40 CFR Part 63, Subpart A and Subpart MMMM for Surface Coating of Miscellaneous Metal Parts and Products by the initial compliance date.[2] **(40 CFR Part 63 Subparts A and MMMM)**

Footnotes:
[1]This condition is state-only enforceable and was established pursuant to Rule 201(1)(b).
[2]This condition is federally enforceable and was established pursuant to Rule 201(1)(a).

FG-COLDCLEANERS
FLEXIBLE GROUP CONDITIONS

DESCRIPTION

Any cold cleaner that is grandfathered or exempt from Rule 201 pursuant to Rule 278 and Rule 281(h), or Rule 285(r)(iv). Existing cold cleaners were placed into operation prior to July 1, 1979. New cold cleaners were placed into operation on or after July 1, 1979.

Emission Unit: EU-COLDCLEANERS

POLLUTION CONTROL EQUIPMENT

NA

I. EMISSION LIMIT(S)

NA

II. MATERIAL LIMIT(S)

1. The permittee shall not use cleaning solvents containing more than five percent by weight of the following halogenated compounds: methylene chloride, perchloroethylene, trichloroethylene, 1,1,1-trichloroethane, carbon tetrachloride, chloroform, or any combination thereof. **(R 336.1213(2))**

III. PROCESS/OPERATIONAL RESTRICTION(S)

1. Cleaned parts shall be drained for no less than 15 seconds or until dripping ceases. **(R 336.1611(2)(b), R 336.1707(3)(b))**

2. The permittee shall perform routine maintenance on each cold cleaner as recommended by the manufacturer. **(R 336.1213(3))**

IV. DESIGN/EQUIPMENT PARAMETER(S)

1. The cold cleaner must meet one of the following design requirements:
   a. The air/vapor interface of the cold cleaner is no more than ten square feet. **(R 336.1281(h))**
   b. The cold cleaner is used for cleaning metal parts and the emissions are released to the general in-plant environment. **(R 336.1285(r)(iv))**

2. The cold cleaner shall be equipped with a device for draining cleaned parts. **(R 336.1611(2)(b), R 336.1707(3)(b))**

3. All new and existing cold cleaners shall be equipped with a cover and the cover shall be closed whenever parts are not being handled in the cold cleaner. **(R 336.1611(2)(a), R 336.1707(3)(a))**

4. The cover of a new cold cleaner shall be mechanically assisted if the Reid vapor pressure of the solvent is more than 0.3 psia or if the solvent is agitated or heated. **(R 336.1707(3)(a))**

5. If the Reid vapor pressure of any solvent used in a new cold cleaner is greater than 0.6 psia; or, if any solvent used in a new cold cleaner is heated above 120 degrees fahrenheit, then the cold cleaner must comply with at least one of the following provisions:
   a. The cold cleaner must be designed such that the ratio of the freeboard height to the width of the cleaner is equal to or greater than 0.7. **(R 336.1707(2)(a))**
   b. The solvent bath must be covered with water if the solvent is insoluble and has a specific gravity of more than 1.0. **(R 336.1707(2)(b))**

c. The cold cleaner must be controlled by a carbon adsorption system, condensation system, or other method of equivalent control approved by the AQD. **(R 336.1707(2)(c))**

V. TESTING/SAMPLING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

NA

VI. MONITORING/RECORDKEEPING

Records shall be maintained on file for a period of five years. **(R 336.1213(3)(b)(ii))**

1. For each new cold cleaner in which the solvent is heated, the solvent temperature shall be monitored and recorded at least once each calendar week during routine operating conditions. **(R 336.1213(3))**

2. The permittee shall maintain the following information on file for each cold cleaner **(R 336.1213(3))**:
   a. A serial number, model number, or other unique identifier for each cold cleaner.
   b. The date the unit was installed, manufactured or that it commenced operation.
   c. The air/vapor interface area for any unit claimed to be exempt under Rule 281(h).
   d. The applicable Rule 201 exemption.
   e. The Reid vapor pressure of each solvent used.
   f. If applicable, the option chosen to comply with Rule 707(2).

3. The permittee shall maintain written operating procedures for each cold cleaner. These written procedures shall be posted in an accessible, conspicuous location near each cold cleaner. **(R 336.1611(3), R 336.1707(4))**

4. As noted in Rule 611(2)(c) and Rule 707(3)(c), if applicable, an initial demonstration that the waste solvent is a safety hazard shall be made prior to storage in non-closed containers. If the waste solvent is a safety hazard and is stored in non-closed containers, verification that the waste solvent is disposed of so that not more than 20 percent, by weight, is allowed to evaporate into the atmosphere shall be made on a monthly basis. **(R 336.1213(3), R 336.1611(2)(c), R 336.1707(3)(c))**

VII. REPORTING

1. Prompt reporting of deviations pursuant to General Conditions 21 and 22 of Part A. **(R 336.1213(3)(c)(ii))**

2. Semiannual reporting of monitoring and deviations pursuant to General Condition 23 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for reporting period July 1 to December 31 and September 15 for reporting period January 1 to June 30. **(R 336.1213(3)(c)(i))**

3. Annual certification of compliance pursuant to General Conditions 19 and 20 of Part A. The report shall be postmarked or received by the appropriate AQD District Office by March 15 for the previous calendar year. **(R 336.1213(4)(c))**

See Appendix 8

VIII. STACK/VENT RESTRICTION(S)

NA

IX. OTHER REQUIREMENT(S)

NA

E. NON-APPLICABLE REQUIREMENTS

At the time of the ROP issuance, the AQD has determined that no non-applicable requirements have been identified for incorporation into the permit shield provision set forth in the General Conditions in Part A pursuant to Rule 213(6)(a)(ii).

APPENDICES

Appendix 1. Abbreviations and Acronyms

The following is an alphabetical listing of abbreviations/acronyms that may be used in this permit.

AQD	Air Quality Division	MM	Million
acfm	Actual cubic feet per minute	MSDS	Material Safety Data Sheet
BACT	Best Available Control Technology	MW	Megawatts
BTU	British Thermal Unit	NA	Not Applicable
°C	Degrees Celsius	NAAQS	National Ambient Air Quality Standards
CAA	Federal Clean Air Act	NESHAP	National Emission Standard for Hazardous Air Pollutants
CAM	Compliance Assurance Monitoring	NMOC	Non-methane Organic Compounds
CEM	Continuous Emission Monitoring	NOx	Oxides of Nitrogen
CFR	Code of Federal Regulations	NSPS	New Source Performance Standards
CO	Carbon Monoxide	NSR	New Source Review
COM	Continuous Opacity Monitoring	PM	Particulate Matter
department	Michigan Department of Environmental Quality	PM-10	Particulate Matter less than 10 microns in diameter
dscf	Dry standard cubic foot	pph	Pound per hour
dscm	Dry standard cubic meter	ppm	Parts per million
EPA	United States Environmental Protection Agency	ppmv	Parts per million by volume
EU	Emission Unit	ppmw	Parts per million by weight
°F	Degrees Fahrenheit	PS	Performance Specification
FG	Flexible Group	PSD	Prevention of Significant Deterioration
GACS	Gallon of Applied Coating Solids	psia	Pounds per square inch absolute
GC	General Condition	psig	Pounds per square inch gauge
gr	Grains	PeTE	Permanent Total Enclosure
HAP	Hazardous Air Pollutant	PTI	Permit to Install
Hg	Mercury	RACT	Reasonable Available Control Technology
hr	Hour	ROP	Renewable Operating Permit
HP	Horsepower	SC	Special Condition
H_2S	Hydrogen Sulfide	scf	Standard cubic feet
HVLP	High Volume Low Pressure *	sec	Seconds
ID	Identification (Number)	SCR	Selective Catalytic Reduction
IRSL	Initial Risk Screening Level	SO_2	Sulfur Dioxide
ITSL	Initial Threshold Screening Level	SRN	State Registration Number
LAER	Lowest Achievable Emission Rate	TAC	Toxic Air Contaminant
lb	Pound	Temp	Temperature
m	Meter	THC	Total Hydrocarbons
MACT	Maximum Achievable Control Technology	tpy	Tons per year
MAERS	Michigan Air Emissions Reporting System	µg	Microgram
MAP	Malfunction Abatement Plan	VE	Visible Emissions
MDEQ	Michigan Department of Environmental Quality	VOC	Volatile Organic Compounds
mg	Milligram	yr	Year
mm	Millimeter		

*For HVLP applicators, the pressure measured at the gun air cap shall not exceed 10 pounds per square inch gauge (psig).

Appendix 2. Schedule of Compliance

The permittee certified in the ROP application that this stationary source is in compliance with all applicable requirements and the permittee shall continue to comply with all terms and conditions of this ROP. A Schedule of Compliance is not required. **(R 336.1213(4)(a), R 336.1119(a)(ii))**

Appendix 3. Monitoring Requirements

Specific monitoring requirement procedures, methods or specifications are detailed in Part A or the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, this appendix is not applicable.

Appendix 4. Recordkeeping

Specific recordkeeping requirement formats and procedures are detailed in Part A or the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, this appendix is not applicable.

Appendix 5. Testing Procedures

Specific testing requirement plans, procedures, and averaging times are detailed in the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, this appendix is not applicable.

Appendix 6. Permits to Install

The following table lists any PTI and/or Operate that relate to the identified emission units or flexible groups as of the effective date of this ROP. This includes all PTI and/or Operate that are hereby incorporated into Source-Wide PTI No. MI-PTI-N6226-201X. The PTIs issued after the effective date of this ROP, including amendments or modifications, will be identified in Appendix 6 upon renewal.

Permit to Install Number	Description of Equipment	Corresponding Emission Unit(s) or Flexible Group(s)
145-12A	Thirteen automotive metal surface coating lines.	FG-GeoMet FG-Magni&Black FG-Zinc FG-MISCMETAL FG-MACT MMMM

Appendix 7. Emission Calculations

Specific emission calculations to be used with monitoring, testing or recordkeeping data are detailed in the appropriate Source-Wide, Emission Unit and/or Flexible group Special Conditions. Therefore, this appendix is not applicable.

Appendix 8. Reporting

A. Annual, Semiannual, and Deviation Certification Reporting

The permittee shall use the MDEQ, AQD, Report Certification form (EQP 5736) and MDEQ, AQD, Deviation Report form (EQP 5737) for the annual, semiannual and deviation certification reporting referenced in the Reporting Section of the Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Alternative formats must meet the provisions of Rule 213(4)(c) and Rule 213(3)(c)(i), respectively, and be approved by the AQD District Supervisor.

B. Other Reporting

Specific reporting requirement formats and procedures are detailed in Part A or the appropriate Source-Wide, Emission Unit and/or Flexible Group Special Conditions. Therefore, Part B of this appendix is not applicable.

Subject: RE: Air Dispersion Modeling Protocol - Fritz Winter North America (Franklin, KY)

Hello Craig,

Thank you for submitting the Fritz Winter Modeling protocol to the Division. With exception of a few comments, the protocol look to be in good order. Please find the KYDAQ protocol review comments below:

- *Section 2.1 Model Selection Summary – an equivalency demonstration for the MPI utilization must be provided in the modeling documentation, Section 3.2.2 (c) of Appendix W.*
- *Section 2.3 Meteorological data – the most recent meteorological data for the years 2016-2020 is being provided by the Division.*
- *Section 3.3 Significant Impact Area – the 2019 KY emission inventory spreadsheet, for all impacted KY counties, is being provided by the Division.*
- *Section 3.4.2 PM_{10} and $PM_{2.5}$ Increment Inventory – model should include any new increment consuming sources in the significant impact area (SIA).*
- *Section 3.5 Pre-Construction Monitoring Analysis – Please submit a formal request letter (for all pollutants, pre-construction monitoring waiver)to the Division for approval. The email can be addressed to Melissa Duff (melissa.duff@ky.gov) – please Cc Rick Shewekah and myself.*
- *Section 3.6 Background Concentrations – provide justification of representative nature of new Nashville monitor in the modeling document.*
- *Section Class I Area PSD Analysis – complete the attached FLM/USFS Request for Determination form and submit to Pleas McNeel(pmcneel@fs.fed.us).*
- *Section 3.9 Air Toxics – utilize the air toxics screening values from the Region 9, MAY 2021 Regional Screening Level (RSL) table.*

Please find the EPA Region 4 protocol review comment below:

Kevin,

Thanks for providing this PSD modeling protocol to us. We have completed review of the protocol and offer the following comment:

Sections 3.4.1 and 3.4.2 – PM_{10} and $PM_{2.5}$ NAAQS and Increment Modeling Inventory

- *Since the original permit application was submitted in 2017, the PM_{10} and $PM_{2.5}$ NAAQS and PSD Increment modeling inventory should be revised to reflect any changes to existing sources or the addition of new sources in the area.*

Don't hesitate to let us know if you have any questions.

-Chris

Introduction

1.1 Document Description and Purpose

This document provides the protocol for the air quality analysis portion of the permit application to demonstrate the permitted major stationary source has not and will not "cause or contribute" to a violation of any applicable National Ambient Air Quality Standard (NAAQS) or Prevention of Significant Deterioration (PSD) increment.

This protocol will also be used to demonstrate that the major stationary source will comply with 401 KAR 63:020 that regulates potential hazardous matter or toxics substances (i.e., toxic air pollutants – TAPs).

1.2 Facility and Location

Fritz Winter North America LP (FW) operates a gray iron foundry and machining operation to produce automotive parts, predominantly brake rotors as authorized by Air Quality Permit V-16-022 R1 (Air Permit) issued on November 25, 2017.

The facility is located at the Wilkey North Industrial Park located in Franklin (Simpson County), Kentucky. The facility is located approximately 5 miles north of Franklin and 13 miles south of Bowling Green along State Route 31W.

The Franklin, Kentucky location is listed under the Standard Industrial Classification (SIC) code of 3714 – Motor Vehicle Parts and Accessories. The maximum production capacity of the foundry and machining operation is based on 91,586 tons of molten gray iron poured per year.

1.3 Process Overview

Molten metal is produced by introducing metallic charge materials, alloys, and fluxes into one of the four electric induction furnaces (EIFs) located at the Franklin, Kentucky facility. The process of producing cast iron metal parts first involves fabricating a green sand mold and then filling the mold with molten iron. Once the metal cools and solidifies, the mold is broken to recover the cast metal part which then undergoes cleaning, machining, and painting. Sand from the broken mold is mechanically reclaimed and prepared for reuse as molding sand.

Emissions at the iron foundry and machining operations result primarily from EIF melting, pouring and mold cooling, shakeout, shotblast, grinding, sand handling, coremaking and coating. Particulate emissions from these operations are captured and controlled by a number of fabric filters . An acid scrubber controls the emission of amine gas used as a catalyst during the production of cores (i.e., coremaking).

A detailed description of each source and air pollution control device will be provided in the air permit application.

1.4 Project Background

As a result of Air Permit required initial performance testing, it was determined that certain established emission limitations were not met. This section identifies the units and pollutants where emission limitations were exceeded and provides a brief analysis of likely causes.

1.4.1 Applicable Permit Limits

In addition to and in concert with other applicable sections, Section B (Foundry Operations), Section B (Coating Operations) 3.c., Section D.5, Section D.7, Section G.4.e, Section G.4.h, Section G.5. and Section H.2. of Air Quality Permit V-16-022 R1 issued on November 25, 2017 includes provisions to conduct performance (emission) testing to verify compliance with permit established emission limitations.

During 2018 and prior to the installation of Control Device CU08 with Stack ST09 (identified in a format of Control Device ID/Stack ID, e.g., CU08/ST09 throughout this document), FW was to comply with Alternative Operating Scenario #2 provided for in Section H of the referenced air permit.

Alternative Operating Scenario #2 allowed the foundry to temporarily exhaust emission units EU33, EU34, EU36, EU37, EU38, EU43, EU44, EU45, EU46, EU47, EU48, EU49, EU50, EU51, EU52, EU59 to Baghouse CU01 (CU01/ST02) prior to the installation of CU08/ST09. Operating per Alternative Operating Scenario 2 is identified in the Air Permit as Phase 1 per the note at the bottom of the emission unit table provided in Section B (Foundry Operations).

When FW is conducting production activities under Alternative Operating Scenario #2, Section H.2 (i.e., Phase 1) of the air permit establishes PM, PM_{10} and $PM_{2.5}$ emission limitations for CU01/ST02 as shown in Table 1-1.

Table 1-1. PM/PM10/PM2.5 Emission Limitations - Phase 1

Control Device (Stack)	Emission Units Controlled	Type of Control and Pollutants Controlled	BACT for PM	BACT for PM_{10}	BACT for $PM_{2.5}$
CU01 (ST02)	EU02, EU04, EU07, EU08, EU09, EU10, EU11, EU12, EU15, EU16, EU33, EU34, EU36, EU37, EU38, EU43, EU44, EU45, EU46, EU47, EU48, EU49, EU50, EU51, EU52, EU59	Baghouse (PM, PM_{10}, $PM_{2.5}$)	0.0010 gr/dscf 1.42 lb/hr 6.20 ton/yr	0.0010 gr/dscf 1.42 lb/hr 6.20 ton/yr	0.0006 gr/dscf 0.85 lb/hr 3.72 ton/yr

Section D.5 of the air permit provides the emission limitations for CU06/ST07 and CU11/ST12. These emission limits are effective when operating under Phase 1 as well as once the Baghouse CU08 is installed (i.e., Phase 2).

Section D.5 also identifies PM, PM_{10} and $PM_{2.5}$ emission limitations for CU01/ST02 and CU08/ST09 during Phase 2 (once Baghouse CU08/ST09 has been installed and the exhaust ducts from emission unit IDs EU33, EU34, EU36, EU37, EU38, EU43, EU44, EU45, EU46, EU47, EU48, EU49, EU50, EU51, EU52, EU59 moved from CU01/ST02 to CU08/ST09). [It is beneficial to note

the facility continues to operate the existing coating operations under Section H. Alternative Operating Scenario #1].

Table 1-2 below provides those Section D.5 identified PM, PM_{10} and $PM_{2.5}$ emission limitations during Phase 2 for CU01/ST02 and CU08/ST09 as well as PM, PM_{10} and $PM_{2.5}$ emission limitations during both Phase 1 and Phase 2 for CU06/ST07 and CU11/ST12.

Comparing Table 1-1 and 1-2 it is worth noting that CU01/ST02 PM, PM_{10} and $PM_{2.5}$ emission limitations did not change to reflect the movement of a number of particulate matter generating sources from CU01/ST02 to CU08/ST09 as the facility transitioned from Phase 1 to Phase 2 operations. Put another way, prior to transitioning to CU08/ST09, a number of units with condensable particulate matter emissions were ducted to CU01/ST02. The CU01/ST02 emission limitations were not altered to reflect the possibility of the increased condensable emissions associated with these units during Phase 1 operations.

Table 1-2. PM/PM10/PM2.5 Emission Limitations

Control Device (Stack)	Emission Units Controlled	Type of Control and Pollutants Controlled	BACT for PM	BACT for PM_{10}	BACT for $PM_{2.5}$
CU01 (ST02)	EU02, EU04, EU07, EU08, EU09, EU10, EU11, EU12, EU15, EU16	Baghouse (PM, PM_{10}, $PM_{2.5}$)	0.001 gr/dscf 1.42 lb/hr 6.20 ton/yr	0.001 gr/dscf 1.42 lb/hr 6.20 ton/yr	0.0060 gr/dscf 0.850 lb/hr 3.72 ton/yr
CU06 (ST07)	EU22, EU23, EU24, EU26, EU27, EU28, EU29, EU30, EU31, EU32, EU53, EU54, EU55, EU56	Baghouse (PM, PM_{10}, $PM_{2.5}$)	0.0025 gr/dscf 2.16 lb/hr 9.46 ton/yr	0.0025 gr/dscf 2.16 lb/hr 9.46 ton/yr	0.0015 gr/dscf 1.30 lb/hr 5.67 ton/yr
CU08 (ST09)	EU33, EU34, EU36, EU37, EU38, EU43, EU44, EU45, EU46, EU47, EU48, EU49, EU50, EU51, EU52, EU59	Baghouse (PM, PM_{10}, $PM_{2.5}$)	0.0025 gr/dscf 3.54 lb/hr 15.5 ton/yr	0.0025 gr/dscf 3.54 lb/hr 15.5 ton/yr	0.0015 gr/dscf 2.12 lb/hr 9.30 ton/yr
CU11 (ST12)	EU60, EU61, EU62, EU64, EU65	Baghouse (PM, PM_{10}, $PM_{2.5}$)	0.0025 gr/dscf 1.32 lb/hr 5.78 ton/yr	0.0025 gr/dscf 1.32 lb/hr 5.78 ton/yr	0.0015 gr/dscf 0.792 lb/hr 3.47 ton/yr

Table 1-3 provides the volatile organic compound (VOC) and carbon monoxide (CO) emission limitations for CU1/ST02, CU07/ST08 (VOC only) and CU08/ST09. These emission limitations are effective under both Phase 1 and Phase 2. **Similar to the PM, PM_{10} and $PM_{2.5}$ issued identified above, CU08/ST09 has identified VOC and CO emissions rates that were not addressed within the emission limitations for CU01/ST02 when it was operating under Phase 1.**

Table 1-3. VOC and CO Emission Limitations

Stack or Vent	Emission Units Combined	BACT for VOC	BACT for CO
ST02	EU02, EU04, EU07, EU08, EU09, EU10, EU11, EU12, EU15, EU16	0.14 lb/hr; 0.61 ton/yr	2.11 lb/hr; 9.25 ton/yr
ST08	EU39, EU40, EU41, EU42	0.70 lb/hr; 1.67 ton/yr	N/A
ST09	EU33, EU34, EU36, EU37, EU38, EU43, EU44, EU45, EU46, EU47, EU48, EU49, EU50, EU51, EU52, EU59	20.8 lb/hr; 39.7 ton/yr	128 lb/hr; 235 ton/yr

Finally, Air Permit Section B.3.h. identifies performance test requirements for the Shakeout Conveyor (EU53) to determine compliance with VOC and CO BACT emission limits identified in Section B.2.e. and f. These emission limits are provided in Table 1-4 and apply during both Phase 1 and 2.

Table 1-4. VOC and CO Emission Limitations - Shakeout Conveyor (EU53)

Emission Unit	Emission Unit Description	BACT for VOC	BACT for CO
EU53	Shakeout Conveyor	0.10 lb/ton gray iron; 4.58 ton/yr	1.00 lb/ton gray iron; 25.3 lb/hr

1.4.2 Initial Performance Test Results (CU01/ST02) – Phase 1

During Phase 1 the initial performance testing was conducted for the Melt Shop Baghouse (CU01/ST02) and Sand System Baghouse (CU06/ST07) in November, 2018 and December, 2018. Results of those tests are provided in Table 1-5 and Table 1-6 for CU01/ST02 and CU06/ST07, respectively.

The CU06/ST07 results provided in Table 1-6 assumed the only source of VOC and/or CO emissions were from the Shakeout Conveyor (EU53), and therefore any VOC and CO emissions determined at the stack were assigned to the Shakeout Conveyor (EU53).

Table 1-5. November and December 2018 Test Results - CU01/ST02

	PM (gr/dscf)	PM10 (gr/dscf)	PM2.5 (gr/dscf)	VOC (lb/hr)	CO (lb/hr)
Emission Limit	0.0010	0.0010	0.0006	0.14	2.11
Performance Test Result	0.00063	0.0017	0.0017	0.28	26.37

The performance test of the CU01/ST02 yielded results that exceeded the permitted emission rates for PM_{10}, $PM_{2.5}$, VOC, and CO. Again, as identified above, CU01/ST02 emission limitations in the Air Permit were not changed to reflect the emissions from the units temporarily ducted to CU01/ST02 during Phased 1 operations.

Table 1-6. November and December 2018 Test Results - CU06/ST07 and EU53

	PM (gr/dscf)	PM10 (gr/dscf)	PM2.5 (gr/dscf)	VOC (lb/ton gray iron)	CO (lb/ton gray iron) (lb/hr)
Emission Limit	0.0025	0.0025	0.0015	0.1	1 25.3
Performance Test Result	0.00042	0.0120	0.012	0.2	0.3 5.13

The performance test of CU06/ST07 determined PM_{10} and $PM_{2.5}$ emissions exceeded applicable emission limits identified in Table 1-6 or correspondingly identified in Table 1-2.

As stated above, since CU06/ST07 was assumed to have no other sources of VOC and CO, it was inferred that those emission rates determined from testing CU06/ST07 were from the Shakeout Conveyor (EU53) and therefore indicated the Shakeout Conveyor exceeded the allowable VOC emission rate provided in Table 1-4.

1.4.3 Performance Testing Results – Phase 2

Section D.5 and D.6 of the Air Permit includes provisions to repeat performance testing following completion of Phase 2 construction activities. The Phase 2 construction activities included installation of Baghouse CU08/Stack ST09 and then moving the exhaust ducts for several emission units from CU01/ST02 to CU08/ST09.

The performance test was conducted and the resulting pollutants in excess of emission limitations were $PM_{2.5}$, VOC, and CO for CU01/ST02 and $PM_{2.5}$ and VOC from CU06/ST07 and EU53, respectively. Note $PM_{2.5}$ emissions from CU01/ST02 and CU06/ST02 were only slightly above permitted limitations as was the VOC emissions from EU53.

A summary of the performance test results are provided and compared to the corresponding emission limits in Table 1-7 and Table 1-8.

Table 1-7. March 2020 Test Results - CU01/ST02

	PM (gr/dscf)	PM10 (gr/dscf)	PM2.5 (gr/dscf)	VOC (lb/hr)	CO (lb/hr)
Emission Limit	0.0010	0.0010	0.0006	0.14	2.11
Performance Test Result	0.00042	0.0007	0.0007	1.42	7.77

Table 1-8. March 2020 Test Results - CU06/ST07 and EU53

	PM (gr/dscf)	PM10 (gr/dscf)	PM2.5 (gr/dscf)	VOC (lb/ton gray iron)	CO (lb/ton gray iron) (lb/hr)
Emission Limit	0.0025	0.0025	0.0015	0.1	1 25.3
Performance Test Result	0.00091	0.0018	0.0018	0.11	0.086 1.24

1.4.4 Other Test Results

In addition to the above tests, performance tests have been conducted on Acid Scrubber CU07 (Stack ST08) and the Phase 2 installation of the Sand/Mold Baghouse CU08 (Stack ST09). Considering the results, these performance tests identified other possible Air Permit changes that would be warranted including the following:

- Acid Scrubber (CU07/ST08), test conducted November 2018, yielded emissions of CO that were unexpected with no underlying permitted emission limitations. [It is believed this is an anomaly and no change is being made to the permit application]
- Acid Scrubber (CU07/ST08), test conducted November 2018, yielded emissions of VOC that were 84% of the allowable limit. This testing was conducted at a production rate which was approximately 13% of the allowable.

1.4.5 Performance Test Results Analysis

The following provides a discussion of the likely causes of the excess emissions.

CU01 and CU06 PM_{10} and $PM_{2.5}$ Emission Limit Exceedances

From reviewing the above PM results, the minimal PM outlet loading indicates the baghouses are performing extremely well at removing filterable PM. The results of the performance test show the measured emission rates meet the current permit PM BACT emission limitations. Potential causes of the emissions limit exceedance include:

- The exceedances of the PM_{10} and $PM_{2.5}$ emission limitation exceedances is the results of the prior permit application's failure to address condensable particulate emissions that can occur during foundry melting, pouring, cooling and/or shakeout operations. No foundry identified in the RACT/BACT/LAER Clearinghouse (RBLC) have PM_{10} and $PM_{2.5}$ emission rates, including condensable, at these low emission rates.
- As identified above, another reason the CU01/ST02 PM_{10} and $PM_{2.5}$ emission limitations were exceeded was a result of the additional emission units and their associated condensable particulate emissions venting to CU01/ST02 during Phase 1 while no accommodation was made in the Air Permit.

To address this issue a revised BACT evaluation will be conducted to determine appropriate PM_{10} and $PM_{2.5}$ emission rates for these operations.

CU01/ST02, CU06/ST07 and EU53 VOC/CO Emission Limit Exceedance
There are several factors that likely led to the excess VOC and CO emission limitations from these stacks and the emission unit. Those factors include the following:

- As identified above regarding the Phase 1 PM_{10} and $PM_{2.5}$ emission limitations, the Air Permit did not consider VOC and CO emission rates from the additional emission units vented to CU01 during Phase 1 when establishing the Air Permit limits.
- Second, VOC and CO emissions vary across pouring, cooling and shakeout based on a number of factors (e.g., cooling time). When assessing compliance with VOC and CO emission limitations it is important to aggregate the performance test results across the applicable stacks and compare those results against a grouped emissions limit for the selected units. The Air Permit did not provide for this allowance.
- Third, it doesn't appear the VOC Shakeout BACT determination accurately reflects the expected VOC emission rate. The prior BACT identified Waupaca Foundry as having a VOC emission limit of 0.1 lb/ton of metal. It is known Waupaca has not been able to demonstrate compliance with that emission limitation.
- Finally, we believe secondary capture of some emissions is occurring and being vented to these stacks resulting in greater emissions of VOC and CO.

To address the above issue a revised BACT evaluation will be conducted to determine appropriate VOC and CO emission rates for these operations. In addition, the revised Air Permit must allow for aggregation of VOC and CO emission rates across multiple air pollution control devices to allow permit flexibility when assessing compliance at the emission unit level.

1.5 Revisions to Previous Permit Applications

Given the results of the above performance tests, the knowledge of other available foundry emissions information and the ongoing Air Permit Monitoring and Recordkeeping, a revised permit application will be submitted to address the above emission limitation exceedances. These changes are summarized in Table 1-9, 1-10 and 1-11 by comparing the expected revised emission rates and BACT to the same values provided in the current Air Permit.

Important aspects of each table can be summarized as follows:

- The largest Table 1-9 increase is a result of revisions made to the Coremaking VOC emission rates. A violation did not occur due to the low production rate experienced during the test. The table shows a reduction in PM and PM_{10} potential emission rates.
- Table 1-10 shows a decrease in potential emissions of PM and PM_{10} with a slight increase in $PM_{2.5}$ emissions.
- Table 1-11 shows an overall potential increase in VOC and CO of 37.56 and 22.61 tpy, respectively for these stacks. [note: these differences do not equate to the same change identified in Table 1-9 due to other emission units not addressed in Tables 1-10 and 1-11.

In addition to the changes identified in Tables 1-10 and 1-11, the revised application will include requests for the following changes:

- Remove shotblast media limit as the emission factor is based on tons of metal processed;
- Change Section H, Alternative Operating Scenario 1, 1.c.Thinner Usage to reflect actual operations.
- Increase Core Wash usage to reflect actual usage rates;
- Add Rust Preventative and Snag Grinding emission units.
- Remove several emission units identified in the initial and revised permit application that will not be installed including Scrap Drying (EU03), Scrap Cleaning (EU04), Holding Furnace #1 (EU11), Holding Furnace #2 (EU12), Mold Shop Baghouse Waste Dust Silo (EU58), Gasoline Storage Tank (EU75), and Paint Booth #3 (EU70).

Table 1-9. Compare 2017 to 2021 Emissions Increase

Pollutant	PSD SER (tpy)	2017 Permit Modification		2021 Permit Revision	
		Emissions Increase (tpy)	PSD Permitting Required? (Yes/No)	Emissions Increase (tpy)	PSD Permitting Required? (Yes/No)
Filterable PM	25	43.3	Yes	34.28	Yes
PM_{10}	15	47.3	Yes	34.28	Yes
$PM_{2.5}$	10	30.9	Yes	34.28	Yes
SO_2	40	1.49	No	1.04	No
NO_x	40	28.5	No	18.04	No
VOC	40	79.1	No	112.27	Yes
CO	100	297	Yes	312.39	Yes
Lead	0.6	0.28	No	0.02	No

Table 1-10. Comparison of Current to Proposed PM BACT

Control Device (Stack)	CURRENT PERMIT (2017)			PROPOSED LIMITS (2021)		
	BACT for PM	BACT for PM_{10}	BACT for $PM_{2.5}$	BACT for PM	BACT for PM_{10}	BACT for $PM_{2.5}$

	Increase over Current Permit (2017) in tpy:		**37.56**	**22.61**

1.6 Protocol Overview

As stated previously, this document provides the protocol for an air quality analysis portion of the permit application to demonstrate that the major stationary source will not "cause or contribute" to a violation of any applicable National Ambient Air Quality Standard (NAAQS) or Prevention of Significant Deterioration (PSD) increment. This protocol will also be used to demonstrate that the major stationary source will comply with 401 KAR 63:020 that regulates potential hazardous matter or toxics substances (i.e., toxic air pollutants – TAPs).

As the installation has not demonstrated compliance with a number of applicable emission units, this air permitting effort is viewed as a revision to the existing Air Permit. Similar to the initial and subsequent modeling this protocol proposes use of updated off-site ambient monitoring information to provide needed background concentrations while also integrating the most recent and available 5 years of meteorological information.

The stack parameters, including release heights, exhaust temperatures, exit velocities, and inside stack-diameters for the fabric filters and any other release points have been reviewed and updated as necessary and are provided in Section 4 of this document.

Emission rates for each modeled pollutant has been updated in the air permit application and are incorporated into this revised air dispersion modeling analysis.

1.7 NSR Applicability

The initial installation and subsequently issued permit estimated emissions above the Prevention of Significant Deterioration (PSD) major source threshold for carbon monoxide (CO). In addition, the project has significant emission rates of particulate matter (PM), PM with an aerodynamic diameter of less than 10 microns (PM_{10}), and PM with an aerodynamic diameter of less than 2.5 microns ($PM_{2.5}$). Revised emissions calculations now project that potential volatile organic compounds (VOCs) emissions will now exceed the major source threshold.

The total emissions from the application to support the 2017 air permit along with the current emission increase from the revised permit application are shown in Table 1-9.

1.8 Air Quality Analysis

As part of the PSD review process, the completion of an air quality dispersion modeling analysis is required to demonstrate that potential impacts from the proposed project will not:

- Cause or contribute to a violation of any applicable NAAQS;
- Exceed a PSD increment; or
- Significantly Affect AQRVs in Class I areas.

This demonstration will be performed for PM_{10}, $PM_{2.5}$ and CO, the pollutants that require PSD review. Emissions of VOC is proposed to be addressed by Application of the EPA's Modeled Emission Rates for Precursors (MERPS).

A project subject to PSD regulations must demonstrate compliance with applicable National Ambient Air Quality Standards (NAAQS) and PSD increments through an air dispersion modeling analysis. To assist in the timely review of the modeling analysis that will be submitted with the complete air permit application, FW requests Kentucky Division for Air Quality's (KDAQ's) written approval of this proposed modeling protocol.

Section 2
Model Selection

2.1 Model Selection Summary

A summary of the AERMOD and pre-processor versions that will be used for the project is identified in Table 2-1. These or newer versions as they are adopted by the United States Environmental Protection Agency (USEPA) will be used to demonstrate compliance with ambient concentration limits.

Table 2-1. AERMOD and Pre-Processor Module Versions

Model/Module	Version
AERMOD	AERMOD version 21112 will be used for the dispersion modeling analysis. MRS uses the Breeze AERMOD View software as a front end user interface for AERMOD and requests permission to use the Breeze parallel version of AERMOD (AERMOD Breeze, version 21112).
AERMAP	Elevations will be assigned to receptors using AERMAP version 18081 and data from the 1/3 arc-second National Elevation Dataset (NED). Elevations for the buildings and sources will be set to the proposed grade elevation.
AERMET	Not applicable. MRS is requesting the use of representative pre-processed meteorological data provided by KDAQ.
AERSURFACE	Not applicable. MRS is requesting the use of representative pre-processed meteorological data provided by KDAQ.
AERMINUTE	Not applicable. MRS is requesting the use of representative pre-processed meteorological data provided by KDAQ.
BPIP	Downwash parameters will be assigned to point sources using BPIP version 04274. All building heights and locations will be provided in the PSD application.

2.2 Model Selection

The U.S. EPA American Meteorological Society / Environmental Protection Agency Regulatory Model (AERMOD) model includes a state-of-the-science downwash algorithm and utilizes AERMET, a meteorological data preprocessor that utilizes current planetary boundary layer theory to calculate dispersion coefficients. The most current version of the AERMOD model (version 21112) will be used in conducting the modeling analysis.

The modeling will be performed using the regulatory default option, which includes:

- Stack-tip downwash; and
- A routine for processing averages when calm wind conditions occur or when meteorological data is missing

2.3 Meteorological Data

EPA modeling guidance allows the use of five years of off-site meteorological data or at least one year of on-site meteorological data. FW is requesting the use of representative meteorological data pre-processed by KDAQ and made available through KDAQ's website (Bowling Green data is applicable for Simpson County). The data is currently available for years 2015 through 2019.

2.4 Building Wake Effects

The emission sources considered in this analysis will be evaluated in terms of their proximity to nearby structures. The purpose of this evaluation is to determine if stack discharge might become caught in the turbulent wakes of these structures. Wind blowing around a building creates zones of turbulence that are greater than if the building was absent. Plumes entrained in the zones of turbulence experience enhanced plume growth and restricted plume rise. AERMOD incorporates the Plume Rise Model Enhancements (PRIME) algorithms using dimensions from the EPA's Building Profile Input Program (BPIP) for estimating for plumes affected by building wakes. The site layout will be used to digitize buildings and structures to be included in the downwash analysis.

Direction-specific building dimensions and the dominant downwash structure parameters will be determined using the BREEZE® BPIP software. This software incorporates the algorithms of the U.S. EPA-sanctioned Building Profile Input Program with PRIME enhancement (BPIP-PRIME).

2.5 Model Terrain

The terrain elevation for each modeled receptor, building, and source will be determined using the USGS National Elevation Dataset (NED).

The terrain height for each modeled receptor will be calculated using the AERMOD terrain processor (AERMAP version 18081). In addition to terrain elevation, an additional parameter called the hill height scale is required for each receptor to execute AERMOD's terrain modeling algorithms. AERMOD computes the impact at a receptor as a weighted interpolation between horizontal and terrain-following states using a critical dividing streamline approach. This scheme assumes that part of the plume mass will have enough energy to ascend and traverse over a terrain feature and the remainder will impinge and traverse around a terrain feature under certain meteorological conditions. The hill height scale will be computed by the AERMAP terrain preprocessor for each receptor as a measure of the one terrain feature in the modeling domain that would have the greatest effect on plume behavior at that receptor.

The hill height scale does not represent the critical dividing streamline height itself, but supplies the computational algorithms with an indication of the relative relief within the modeling domain for the determination of the critical dividing streamline height for each hour of meteorological data.

According to Section 2.2.1 of the AERMOD Users Guide, the NED array boundary for AERMAP must include all terrain features that exceed a 10 percent elevation slope from any given receptor to properly calculate the hill height scale at each receptor. The domain for the hill height analysis will be set to the minimum coverage required for proper handling of elevation slope (an automated feature within the Breeze AERMOD software).

2.6 Urban/Rural Determination

As with the initial construction modeling, the facility remains located in a predominantly rural area. Therefore, rural settings will be selected in AERMOD.

2.7 Receptors

The same Cartesian receptor grid spacing [using UTM WGS84 coordinate system] in the i**nitial construction demonstration** will be used for the SMC and SIA model runs including:

- receptors spaced at 100 meter intervals along the fenceline;
- receptors spaced at 100-meter intervals extending approximately 4 km from the center of the facility.
- Receptors spaced at 500 meter extending from 4 km to 10 km from the center of the facility;
- If necessary, receptors spaced 1,000 meters extruding from 10 km to 50 km from the center of the facility.

The results of the SIA modeling, demonstrating the extents of the Significant Impact Area, will determine the size of the Cartesian receptor grid (with 100-meter spacing) surrounding the facility to be used for PSD Increment and NAAQS modeling analyses. Locations of off-site background sources and Class I Area(s) will determine the locations of additional receptors.

2.8 Non-Default Options

FW is not requesting the use of any non-regulatory default options in AERMOD.

Section 3
Modeling Methodology

3.1 Introduction

For pollutants that exceed PSD significant emission levels, the modeling analysis is performed in the following two step process:

Step 1 – A significant impact analysis, and if required;
Step 2 – A full impact analysis.

3.2 Significant Impact Analysis

In the Significant Impact Analysis, only project sources will be modeled to determine if the proposed emission changes have a significant impact on the surrounding areas. The maximum modeled concentrations from the significant impact analysis will be compared to the applicable significant impact levels (SILs), for each pollutant and averaging period. If the maximum modeled concentration is less than the SIL, no further analysis is required to demonstrate compliance with the NAAQS or PSD Increment. If the maximum modeled concentration exceeds the applicable SIL, a full impact analysis will be completed. Based on the prior application modeling results, it is anticipated that a full impact analysis will be required for PM_{10} and $PM_{2.5}$ emissions.

Table 3-1 summarizes the applicable SILs for each pollutant that will be modeled and identifies the AERMOD output option that will be used to evaluate each pollutant's SIL.

3.3 Significant Impact Area

Assuming at least one pollutant exceeds the SIL, the Significant Impact Analysis conducted above establishes the Significant Impact Area (SIA). The project's SIA is determined as the geographical area that the required air quality analyses for NAAQS and PSD increment air dispersion modeling will be conducted.

This area is defined to include all locations where the modeled potential emissions from the new sources are determined to be above the SIL, and for modeling purposes is treated as a radius around the facility to the most distant receptor exceeding the SIL, as a worst-case (largest) SIA for all pollutants and averaging periods, and described further as follows:

- For NAAQS with annual or 24-hour averages, the SIA is defined as the circular area from the radius from the source to either the most distant point where the model estimates a SIL will be exceeded or 50 kilometers, whichever is less. As discussed below, sources outside the SIA but inside the 50 kilometers will be screened using a 20D approach to determine if their impact is significant to the project.
- For NAAQS with shorter duration, such as for CO (which is not expected to exceed the SIL), a SIA will be similar to the above but not shorter than 10 kilometers.

The SIA is used for the full Impact analysis (both NAAQS and PSD increment) as well as a guide to identify other sources and facilities that will be included in the air dispersion modeling. Because compliance with the previous Air Permit has not been completely demonstrated and considering the limited emission increase identified in Section 1. The states of Kentucky and Tennessee will be contacted to identify off-site sources that should be evaluated as part of the modeling analysis.

3.4 Full Impact Analysis

For pollutants with maximum modeled concentration that exceed the applicable SIL, a full impact analysis will be completed. The full impact analysis considers post-project "facility-wide" emissions including non-project emission sources. A full impact analysis will be conducted for the significant impact area (SIA) as defined as a radius around the facility to the most distant receptor exceeding the SIL for each pollutant and averaging period, as discussed above.

Given the previous air dispersion modeling, it is anticipated a full impact analysis will be required for PM_{10} and $PM_{2.5}$ and the analysis is outlined below. Should a full impact analysis be required for CO, a similar approach will be used.

3.4.1 PM_{10} and $PM_{2.5}$ NAAQS Modeling Inventory

For PM_{10} and $PM_{2.5}$, the NAAQS demonstration will consider facility-wide emissions as well as off-site emissions. As discussed, the off-site PM_{10} and $PM_{2.5}$ emissions will consider permitted major sources within the SIA as identified in the original permit application.

Permitted sources located outside the SIA and within the annular area extending 50 km from the source will also be included if they have a potential to affect air quality near the source. This determination was made in the original application by using the '20D' approach, to eliminate the majority of regional facilities from the PSD NAAQS modeling analysis that would not be expected to have a significant impact on analysis results. Under this approach, an off-site source is excluded if its potential allowable emissions (Q) in tons/yr is less than 20 times the distance in kilometers ("20D") between it and the facility.

NAAQS values and AERMOD output options for determining compliance are provided in Table 3-1.

3.4.2 PM_{10} and $PM_{2.5}$ Increment Inventory

The increment inventory to be considered in the modeling analysis will include all increment-affecting sources located within the SIA of the facility.

The "baseline concentration" is the existing concentration at the time of the first "complete" application submittal in an area. The emissions that start after that date add to the consumption of the increment.

Table 3-1. Applicable Modeling Levels, Concentrations, Standards and PSD Increments

Pollutant	Averaging Period	Significant Monitoring Concentration[a] (µg/m^3)	AERMOD SMC Output Option	Class I SIL[e] (µg/m^3)	Class II SIL[e,g] (µg/m^3)	AERMOD SIL Output Option	Primary NAAQS (µg/m3)	AERMOD NAAQS Output Option	PSD Class I Increment[f] (µg/m^3)	PSD Class II Increment[f] (µg/m^3)	AERMOD PSD Increment Output Option
PM_{10}	24-hour	10	H1H for all 5-years (together), 1 run (5 years), Single highest H1H value	-	5	H1H for all 5-years (together), 1 run (5 years), Single highest H1H value	150	H6H for all 5-years (together), 1 run (5 years), Single highest	8	30	H2H for each 1-year, 5 separate runs (years), Maximum of

[b]NTBE=Not to be exceeded

[c]Primary and secondary annual PM10 NAAQS of 50 µg/m3 was revoked effective 12/18/2006 [71 FR 6114].

[d]$PM_{2.5}$ SMC determined not authorized by CAA (court decision June 23, 2016), but EPA retains the argument that value can be used as part of an overall monitoring assessment

[e]401 KAR 51:017 Section 9(2). See footnote g.

[f]401 KAR 51:017 Section 2(1)

[g]USEPA document "Guidance on SIL for Ozone and Fine Particles in PSD Permitting Program" (4/17/2018) identifies annual $PM_{2.5}$ Class II SIL value of 0.2 µg/m^3

The types of stationary point sources within the SIA that would be reviewed to determine the need to include them in the increment inventory fall under two specific time frames identified below:

Major Source Baseline Date
The "major source baseline date" is defined by statute or implementing regulation. The "major source baseline dates" are January 6, 1975 and October 10, 2010, for PM_{10} and $PM_{2.5}$, respectively. After the "major source baseline date" the following sources will be reviewed to determine the need to including them in the increment inventory:

- New major stationary sources, including the original applicant; and
- Existing major stationary sources undergoing modifications.

At the time of submittal of the previous application no major sources were identified in the SIA.

Minor Source Baseline Date
The "trigger date" is the date established by EPA, after which the minor source baseline date may be established. The "trigger dates" are August 7, 1977 and October 20, 2011 for PM_{10} and $PM_{2.5}$, respectively. Following the trigger date, the "minor source baseline date" is established after which a "complete" PSD application starts the counting of changes in minor source emissions. EPA has assumed the "minor source baseline date" is equivalent to the "trigger date." Therefore, since the "minor source baseline date" has passed, after submittal of the initial "complete" PSD permit application, the following sources will be reviewed to determine the need to including them in the increment inventory:

- Existing stationary sources having undergone a physical change or change in their method of operation; as well as
- Existing stationary sources having increased hours of operation or capacity utilization (unless such change was considered representative of baseline operating conditions).

As no other "complete" PSD permit application had been submitted prior to the initial FW permit application, providing this application is revising the previous application, and the fact the facility has not demonstrated initial compliance with PM_{10} and $PM_{2.5}$ emission limits contained in the subsequently issued Air Permit, the requirement to include sources beyond the "minor source baseline date" is not yet applicable.

PSD Class II Increment values and the AERMOD output option for determining compliance with those values are identified in Table 3-1.

3.5 Pre-Construction Monitoring Analysis

As part of a PSD modeling analysis, a pre-construction monitoring analysis must be performed to determine whether preconstruction monitoring may be required to evaluate existing air quality before the permit is issued. The U.S. EPA's Significant Monitoring Concentrations (SMC) establish the levels at which a facility may need to conduct pre-construction ambient air quality monitoring for pollutants subject to PSD review in order to evaluate the existing air quality.

Note that since the emission increases exceed PSD thresholds for PM_{10} and $PM_{2.5}$ [CO is likely excluded as a result of concentrations less than the respective SIL], a pre-construction monitoring analysis will only be conducted for these pollutants.

Table 1 provides the and AERMOD output options that will be used to assess whether the SMCs values are exceeded. FW will compare the applicable pollutant-averaging period maximum model concentration result from the significant impact analysis to these SMCs. If the SMCs are not exceeded, then no pre-construction monitoring could be required.

Similar to the previous application, it is anticipated that the maximum modeled PM_{10} and $PM_{2.5}$ concentrations will exceed the SMC.

3.6 Background Concentrations

A "representative" background concentration is required for each modeled pollutant and averaging period to complete the NAAQS modeling analysis. In this modeling analysis it is anticipated that only NAAQS modeling for 24-hour PM_{10} and both 24-hour and annual $PM_{2.5}$ averaging periods will be required.

The background concentration accounts for sources of air pollution other than those explicitly modeled (i.e., the facility and the industrial neighbors identified to represent the nearby inventory sources). Typically, background concentrations are accounted for by using air quality data measured at an appropriate monitoring station.

In the 2017 permit application, FW used the background PM_{10} concentration from the Nashville Monitor (AQS ID: 47-037-0024) active 2000 through 2016 located at 56th Avenue and Louisiana Streets in Nashville, TN and the $PM_{2.5}$ concentration from the Bowling Green Monitor/Smiths Grove (AQS ID: 21-227-0009) located at 226 Sunset Street Smiths Grove, Kentucky. Background concentrations are shown in Tables 3-2 and 3-3 below.

Table 3-2. PM10 Background Concentrations - Nashville, TN Monitor (AQS ID: 47-037-0024)

Year	Second High 24-Hour Concentration (µg/m3)
2014	38
2015	41
2016	33
Average	**37**

Table 3-3. PM2.5 Background Concentration - Bowling Green, KY Monitor (AQS ID: 21-227-0009)

Year	Averaging Period	
	Annual ($\mu g/m^3$)	24-Hour ($\mu g/m^3$)
2014	9.10	20.0
2015	8.40	18.0
2016	8.10	15.5
Average	**8.53**	**17.8**

If the maximum modeled PM_{10} and $PM_{2.5}$ concentrations exceeds the SMC, as with the prior application, given the above PM_{10} Nashville Monitor (AQS ID: 47-037-0024) is no longer active, FW proposes to use the Nashville Monitor (AQS ID: 47-037-0023) located at 105 South 17th Street in Nashville, TN. Sufficient annual data is available for years 2018-2020.

Below provides the 1st through 4th maximum PM_{10} 24-hour averages for calendar years 2018-2020 at the above Nashville Monitor AQS ID: 47-037-0023.

CY2018: 55 $\mu g/m^3$; 41 $\mu g/m^3$; 32 $\mu g/m^3$; 32 $\mu g/m^3$
CY2019: 33 $\mu g/m^3$; 32 $\mu g/m^3$; 29 $\mu g/m^3$; 29 $\mu g/m^3$
CY2020: 63 $\mu g/m^3$; 58 $\mu g/m^3$; 42 $\mu g/m^3$; 41 $\mu g/m^3$

The above provides an average second high 24-hour concentration of 43.6 $\mu g/m^3$.

As with the previous application, FW proposes continued use of the Bowling Green Monitor/Smiths Grove (AQS ID: 21-227-0009) located at 226 Sunset Street Smiths Grove, Kentucky for $PM_{2.5}$ 24-hour and annual averaging periods.

The above Bowling Green/Smiths Grove monitoring location provides the following background $PM_{2.5}$ values:

- 24-hour average $PM_{2.5}$ concentration using the average of the 98th percentile values over the three year period of 2018-2020 of 16.59 µg/m3 (17.36, 16.41, 16.00)
- Annual average $PM_{2.5}$ concentration using the average concentrations over the three year period of 2018-2020 is 7.76 ug/m3 (7.97, 7.57, 7.75).

3.7 Class I Area Impact Assessment

The current Federal Land Manager (FLM) policies, as outlined in the FLAG document (2010 Federal Land Air Guidance) state that any Class I areas within 300 km of the proposed source as well as any other Class I areas that may be potentially affected should be identified and evaluated for potential air quality impacts on those Class I areas.

Class I areas are federally protected areas for which more stringent air quality standards apply. “Class I” areas are generally defined as federal lands such as national parks (NP), national wilderness areas, and national monuments. There are five (5) Class I areas within 300 km of the facility location.

Typically, Class I area assessments are conducted in the following two ways: PSD increment consumption and AQRV (typically visibility and deposition).

A list of these Class I areas and their approximate distance from the facility is provided in Table 3-4.

Table 3-4. Distance to Class I Areas within 300 km of Fritz Winter

Site/Class I Area	UTM Cooridnates		Shortest Distance to Fritz Winter (km)
	East (km)	North (km)	
Fritz Winter	539.82	4072.44	-
Mammoth Cave National Park	574.61	4109.48	51
Great Smoky Mountains National Park	774.92	3943.98	268
Joyce Kimer-Slickrock Wilderness	771.57	3928.7	273
Sipsey Wilderness	467.42	3798.71	283
Cohutta Wilderness	716.4	3874.22	265

3.7.1 Class I Area AQRV PSD Analysis

The Federal Land Managers (FLM) have the authority to protect Air Quality Related Values (AQRVs), and to consider in consultation with the permitting authority whether a proposed major source or modification will have an adverse impact on such values. AQRVs for which PSD modeling evaluations is typically conducted include visibility and deposition of sulfur and nitrogen.

Historically, Class I Area AQRV analyses were developed based on the distance between a PSD project and a Class I Area. The distance threshold has been 300+ km depending on the magnitude of emissions for a project and regulatory agency discretion.

In October 2010, The Federal Land Managers Air Quality Related Values (AQRV) Workgroup (FLAG) Phase I Report – Revised (2010) was issued providing guidance which established a threshold ratio of emissions to distance, which AQRV review is not required. Specifically, if the sum of SO_2, NO_x, PM_{10} and H_2SO_4 emissions (Q, in tpy) divided by distance (d, in km) is less than 10, no AQRV analysis is required.

Based upon the distance to the nearest Class I area to the project, as with the previous applications, FW proposes to use the Q/D screening criteria in the Federal Land Managers' Air Quality Related Values Work Group (FLAG) Phase I Report to demonstrate that the project will have no significant impacts on any Class I air quality related value (AQRV), including visibility.

Similar to the initial project it is assumed that no value will exceed 10 and the facility will not be subject to AQRV review.

3.7.2 Class I Area PSD Increment Analysis

Provided all the Class I areas are located more than 50 km from the facility the following approach will be used:

AERMOD will be used to determine concentrations at the boundary of the model by placing receptors as follows for each of the six (6) Class I Areas identified in Table 3 4: in 3 rows of arcs, at 48 km, 49 km, and 50 km from the facility, with each arc spanning 10 degrees of the circumference (5 degrees each direction from the straight line between the site and the Class I Area), with spacing of 100 meters between receptors in each arc.

Given the results of the previous permit application presented in Table 3-5 below, it is anticipated that concentrations will be less than the Class I Area SILs.

Provided the concentrations are less than the Class I Area SILs at 50 km, it is assumed that concentrations at distances beyond 50 km will continue to decrease. Based on this review it would be determined that no Class I areas will be negatively impacted per Section 4.2 of the Guideline on Air Quality Models.[1]

Table 3-5. Class I Maximum Impact Comparted to Class I SIL (2016 Application)

Pollutant	Averaging Period	Significant Impact Level µg/m^3	Class I Area Maximum Impact in µg/m^3				
			Mammoth Cave	Great Smokey Mountains	Joyce Kilmer-Slickrock	Cohutta	Sipsey
$PM_{2.5}$	Annual	0.06	0.00516	0.000116	0.0000935	0.000125	0.0000884
	24 hr	0.07	0.0606	0.00246	0.00179	0.00258	0.00206
PM_{10}	Annual	0.16	0.00625	0.0000568	0.0000471	0.0000603	0.0000464
	24 hr	0.32	0.0951	0.00216	0.00174	0.00161	0.00173

3.7.3 Modeling for Visibility

Similar to Section 3.7.1, the protocol proposes to use the Q/D screening criteria in the Federal Land Managers' Air Quality Related Values Work Group (FLAG) Phase I Report to demonstrate that the project will have no significant impacts on visibility.

3.8 Modeled Emission Rates for Precursors (MERPs)

On August 2, 2018 Kentucky Division for Air Quality released a document entitled "Application of the EPA's Modeled Emission Rates for Precursors (MERPS) for Secondary Pollutant Formation in Kentucky." Following release of this document, on April 30, 2019 USEPA issued an update to their guidance entitled "Guidance on the Development of Modeled Emission Rates for Precursors (MERPs) as a Tier 1 Demonstration Tool for Ozone and $PM_{2.5}$ under the PSD Permitting Program."

The Kentucky DAQ guidance document will be followed for the evaluation of both $PM_{2.5}$ and ozone as required. The Table 3 Default MERP values for Kentucky PSD Applications will be used.

[1] USEPA, Guideline on Air Quality Models, 40 CFR, Part 51, Appendix W, FR, Vol. 82, No. 19, Section 4.2

3.8.1 Secondary Formation of $PM_{2.5}$

The Kentucky DAQ document entitled "Application of the EPA's Modeled Emission Rates for Precursors (MERPS) for Secondary Pollutant Formation in Kentucky" presents a multitiered screening analysis based on facility wide emission rates of NO_x, SO_2 and $PM_{2.5}$ emissions.

It is anticipated that a cumulative analysis will be required for $PM_{2.5}$. As stated above, the current project direction is to use the Table 3 Default MERP Values when conducting the cumulative analysis.

3.8.2 Secondary Formation of Ozone

Potential emissions of NO_2 are below the significant emission rate of 40 tpy; however, potential VOC emissions from the project will be above the significant emission rate of 40 tpy. VOC is considered a precursor for secondary formation of ground-level (tropospheric) ozone. Therefore, an assessment of the potential impact on ambient ozone air quality in the area is required.

For ozone the tiered approach will again be used. Given the facility's emission rate of NO_x and VOC, a cumulative analysis will likely be unnecessary.

Simpson County is currently designated as attainment for ozone. Simpson and the surrounding counties are rural with relatively few industrial sources and have low background concentrations of ozone as compared to other areas of the state. Given that secondary formation of ozone is more of a long-range transport issue, precursor VOC emissions from the project are not expected to have significant impacts to ambient air quality or to cause or significantly contribute to a violation of the ozone NAAQS.

3.9 Air Toxics

The project includes emissions of certain compounds that may be identified as "potentially hazardous matter or toxic substances." To demonstrate FW will comply with 401 KAR 63:020 that regulates potential hazardous matter or toxics substances (i.e., toxic air pollutants – TAPs) and in order to evaluate whether these toxic compounds are in sufficient concentration that they could present a health hazard, air dispersion modeling will be conducted.

The same meteorological data and stack conditions described elsewhere will be used to determine maximum annual ground level concentrations of each TAP. The maximum concentration of all the receptors will be compared to the concentrations listed as having a significant health threat in EPA Region IX "Regional Screening Level (RSL) Resident Ambient Air Table (TR=1E-6, HQ=1) June 2015". The concentrations in that table were derived for chemical exposures around waste storage sites and are considered very conservative.

3.10 Additional Impact Analysis

The results of the air dispersion modeling analysis will be used in the project's additional impact analyses to assist in assessing impacts related to growth, adverse effects on soil & vegetation, and visibility impairment.

Section 4
Emission and Stack Characterization

4.1 Emissions Modeled

In the modeling analysis for the NAAQS and PSD increment demonstrations, the worst-case emissions for site-wide sources will be modeled. Potential hourly emission rates will be used to develop 24-hour and annual emission rates.

4.2 Stack Parameters

Table 4-1 contains a summary of the facility stack parameters that will be modeled. The facility does not operate any other emission sources. The emission sources will be modeled as point sources with the identified Stack Parameters.

Table 4-1. Modeled Emission Sources and Stack Parameters

Stack ID	X Coord (m)	Y Coord (m)	Stack Height		Stack Diameter		Stack Temperature		Stack Velocity		Air Volume (cfm)	Stack Orientation
			(m)	(ft)	(m)	(ft)	(°K)	(°F)	(m/s)	(fps)		
ST02	539906	4072425	35	114.8	2.54	8.33	305	90	14.9	48.9	160000	V

Subject: Pre-construction Ambient Air Monitoring Waiver Request
Fritz Winter North America, LP (Agency Interest No. 129745)
Franklin, Kentucky

Dear Ms. Duff;

Fritz Winter North America, LP (FWNA) will be submitting a revised air permit application to facilitate changes to the existing PSD/Title V Air Quality Permit V-16-022-R1 (Air Permit) issued on November 25, 2017 for the operation located at 1 Fritz Winter Way in Franklin (Simpson County), Kentucky.

Consistent with the previous permit applications submitted in 2016 and 2017, this correspondence requests a waiver of the 40 CFR 52.21(m) requirement to conduct pre-construction site-specific monitoring of ambient air for the purpose of establishing background concentrations for the permit application required air quality impact analysis. As an alternative, and as provided for in 40 CFR 51, Appendix W, FWNA is requesting the use of existing regional data providing the available data meets the requirements identified in 40 CFR 51, Appendix W, 8.3.1 and 8.3.2. As requested by your staff, the revised air permit application will provide necessary information to support the selected monitors providing ambient air concentrations meet the requirements of 40 CFR 51, Appendix W, 8.3.1 and 8.3.2.

Background

As authorized by the Air Permit, Fritz Winter North America LP (FW) constructed and operates a gray iron foundry and machining operation to produce automotive parts, predominantly brake rotors. The facility is located in the Wilkey North Industrial Park located in Franklin, Simpson County, Kentucky. The facility is located approximately 5 miles north of Franklin and 13 miles south of BowlingGreen along State Route 31W.

As a result of Air Permit required initial performance testing, it was determined that certain established emission limitations were not met. Given the results of the performance test, a revised permit application is being prepared.

While the application is not yet complete, a comparison of the likely project emissions is presented in Table 1-1 below. The largest Table 1-1 increase is a result of revisions made to the Coremaking volatile

organic compound (VOC) emission rates. The table also show a reduction in PM and PM_{10} potential emission rates and an increase in carbon monoxide (CO) emissions.

Table 1-1. Emission Increase Comparison (2017 versus 2021)

Pollutant	PSD SER (tpy)	2017 Permit Modification		2021 Permit Revision	
		Emissions Increase (tpy)	PSD Permitting Required? (Yes/No)	Emissions Increase (tpy)	PSD Permitting Required? (Yes/No)
Filterable PM	25	43.3	Yes	34.28	Yes
PM_{10}	15	47.3	Yes	34.28	Yes
$PM_{2.5}$	10	30.9	Yes	34.28	Yes
SO_2	40	1.49	No	1.04	No
NO_x	40	28.5	No	18.04	No
VOC	40	79.1	No	112.27	Yes
CO	100	297	Yes	312.39	Yes
Lead	0.6	0.28	No	0.02	No

Similar to the initial application, due to the emission rates of CO and possibly VOC emissions exceeding 100 tpy, PSD permitting requirement will be applicable to PM_{10}, $PM_{2.5}$, VOC, and CO. While we continue to finalize the emission increase, it is possible that VOC emissions from this application will decrease to below 100 tpy.

Table 1-2 compares the expected revised emission rates and BACT to the same values provided in the current Air Permit. The table shows a decrease in potential emissions of PM and PM_{10} and an increase in $PM_{2.5}$ emissions.

Table 1-2. Preliminary PM BACT Comparison (2017 versus 2021)

Control Device (Stack)	CURRENT PERMIT (2017)			PROPOSED LIMITS (2021)		
	BACT for PM	BACT for PM_{10}	BACT for $PM_{2.5}$	BACT for PM	BACT for PM_{10}	BACT for $PM_{2.5}$
CU01 (ST02)	0.001 gr/dscf 1.42 lb/hr 6.20 ton/yr	0.001 gr/dscf 1.42 lb/hr 6.20 ton/yr	0.0006 gr/dscf 0.850 lb/hr 3.72 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr	0.002 gr/dscf 2.64 lb/hr 11.58 ton/yr
CU06 (ST07)	0.0025 gr/dscf 2.16 lb/hr 9.46 ton/yr	0.0025 gr/dscf 2.16 lb/hr 9.46 ton/yr	0.0015 gr/dscf 1.30 lb/hr 5.67 ton/yr	0.0025 gr/dscf 2.21 lb/hr 9.67 ton/yr	0.0025 gr/dscf 2.21 lb/hr 9.67 ton/yr	0.0025 gr/dscf 2.21 lb/hr 9.67 ton/yr
CU08 (ST09)	0.0025 gr/dscf 3.54 lb/hr 15.5 ton/yr	0.0025 gr/dscf 3.54 lb/hr 15.5 ton/yr	0.0015 gr/dscf 2.12 lb/hr 9.30 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr	0.002 gr/dscf 1.90 lb/hr 8.32 ton/yr
CU11 (ST12)	0.0025 gr/dscf 1.32 lb/hr 5.78 ton/yr	0.0025 gr/dscf 1.32 lb/hr 5.78 ton/yr	0.0015 gr/dscf 0.792 lb/hr 3.47 ton/yr	0.001 gr/dscf 0.57 lb/hr 2.51 ton/yr	0.001 gr/dscf 0.57 lb/hr 2.51 ton/yr	0.001 gr/dscf 0.57 lb/hr 2.51 ton/yr
	Increase over Current Permit (2017) in tpy:			**-4.86**	**-4.86**	**9.92**

Table 1-3 compares the expected revised emissions rates and BACT for VOC and CO to the same values provided in the Air Permit. The table shows an overall potential increase in VOC and CO of 37.56 and 22.61 tpy, respectively for these stacks.

Table 1-3. Preliminary VOC and CO BACT Comparison (2017 versus 2021)

Stack or Vent	CURRENT PERMIT (2017)		PROPOSED LIMITS (2021)	
	BACT for VOC	BACT for CO	BACT for VOC	BACT for CO
CU01 ST02	0.14 lb/hr; 0.61 ton/yr	2.11 lb/hr; 9.25 ton/yr	3.85 lb/hr; 4.85 ton/yr	2.11 lb/hr; 31.85 ton/yr
CU06 ST07 (Previously EU53)	0.10 lb/ton gray iron; 4.58 ton/yr	1.00 lb/ton gray iron; 25.3 lb/hr	0.528 lb/ton gray iron; 13.39 lb/hr 24.18 ton/yr	1.00 lb/ton gray iron; 25.30 lb/hr 45.79 ton/yr
CU07 ST08	0.70 lb/hr; 1.67 ton/yr	N/A	17.35 lb/hr; 31.38 ton/yr	N/A
CU08 ST09	20.8 lb/hr; 39.7 ton/yr	128 lb/hr; 235 ton/yr	12.98 lb/hr; 23.71 ton/yr	128 lb/hr; 234.74 ton/yr
	Increase over Current Permit (2017) in tpy:		**37.56**	**22.61**

SILs and SMCs

Generally, when conducting the preliminary analysis during the air quality impacts phase of the project, if modeled emission rates are below the significant impact levels (SILs), no further modeling is required. As with the previous permit applications, maximum concentrations of CO will be less than both the 8-hour and 1-hour SILs, therefore background concentrations of CO will be unnecessary for the project.

Significant Monitoring Concentrations (SMCs) are levels if not exceeded additional monitoring may not be necessary. Though emission calculations are being finalized it is possible that PM_{10} 24-hour concentrations will be less than the 10 $\mu g/m^3$ SMC value. Should this continue to be the result, establishing background concentrations of PM_{10} would also be unnecessary.

PM2.5 is expected to exceed the applicable SIL and the 24-hour SMC[1]

Request

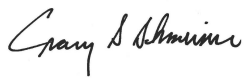
Similar to the previous applications as well as a large majority of PSD permit applications that are prepared and submitted, FWNA is requesting the use of federal and/or state-collected air quality monitoring data to establish "background" concentrations for use in conducting the air quality impact

[1] PM2.5 SMC determined not authorized by CAA (Court decision June 23, 2016), but EPA retains the argument that value can be used as part of an overall monitoring assessment.

analysis portion of the revised air permit application and correspondingly a waiver of the pre-construction ambient air monitoring requirements.

Should you have any questions regarding this request, please contact me at craig.schmeisser@madriverstrategies or 614.425.6392 or Eddie Butler at eddie.butler@fritzwinter.us.

Respectfully submitted,



Craig S. Schmeisser

Re: Pre-construction Monitoring Waiver

Dear Mr. Butler,

The Kentucky Division for Air Quality (Division) has received and reviewed the request for a pre-construction monitoring waiver submitted within the letter dated October 7, 2021, by Mad River Strategies LLC on behalf of Fritz Winter North America, LP (Fritz Winter).

As stated in the protocol, Fritz Winter is aware that the U.S. Environmental Protection Agency requires onsite pre-construction monitoring pursuant to 40 CFR 52.21(m)(a)(iii-iv). However, section 8.2.2.c. of Appendix W to 40 CFR 51 (Guidance) states:

If there are no monitors located in the vicinity of the source, a "regional site" may be used to determine background. A "regional site" is one that is located away from the area of interest but is impacted by similar natural and distant man-made sources.

The letter submitted on October 7, 2021, identified Fritz Winter's desire to utilize air quality monitors that best represent background concentrations for PM, PM_{10}, $PM_{2.5}$, VOC and CO at the Fritz Winter North America, LP site. At this time, the Division grants the request to waive pre-construction monitoring for the Fritz Winter North America, LP project. Fritz Winter will be responsible for providing sufficient justification for the representative monitors chosen according to 401 KAR 51:017 and 40 CFR 51, Appendix W in the anticipated permitting application.

If you have any questions, please contact Amy Tempus-Doom, Metallurgy Section Supervisor, at (502) 782-6786 or Amy.Tempus-Doom@ky.gov.

Sincerely,

Rick Shewekah

Section B.2: Materials and Fuel Information

**Maximum yearly fuel usage rate only applies if applicant request operating restrictions through federally enforceable limitations.*

Emission Unit #	Emission Unit Name	Name of Raw Materials Input	Maximum Quantity of Each Raw Material Input	(Specify Units/hr)	Total Process Weight Rate for Emission Unit (tons/hr)	Name of Finished Materials	Maximum Quantity of Each Finished Material Output	(Specify Units/hr)	Fuel Type	Maximum Hourly Fuel Usage Rate	(Specify Units)	Maximum Yearly Fuel Usage Rate	(Specify Units)	Sulfur Content (%)	Ash Content (%)
EU81	Core Wash Station #4	Uncoated Cores Wash	3.7 676	tons/hr lbs/hr	3.7 tons/hr	Coated Cores	3.7	tons/hr	N/A	N/A	--	N/A	--	0%	0%
EU82	Rust Preventative Application	Finished Product Rust Preventative	25.3 20	tons/hr lbs/hr	25.3 tons/hr	Finished Product	25.3	tons/hr	N/A	N/A	--	N/A	--	0%	0%

Section B.3: Notes, Comments, and Explanations
The following Emission Units have yet to be installed: EU03, EU04, EU11, EU12, EU15, EU34, EU41, EU42, EU46, EU47, EU49, EU51, EU58, EU62, EU65 (on order/not installed), EU70, EU75
EU77 : Change Paved Roadways from EU76 to EU77 as EU76 is already identified as the ID for the diesel storage tank.
EU11-EU16: Change operating limit to 91,586 tpy; incorrect assumption to split 50:50
EU17: Change description from "Melt Shop Baghouse Waste Dust Silo" to "Core/Mold Baghouse Waste Dust Silo"
EU19-EU21, EU35A-EU35B: Change hourly capacity to 25 tph to reflect pnuematic conveying truck capacity
EU21-EU34,EU48,EU49: Combine into a single emission unit described as "Moldmaking and Sand Handling" with Emission Unit ID EU21 to match SCC description
EU33-EU34: Change maximum hourly capacity as 1975 tph for the group; incorrect assumption to split 50:50
EU50-EU51: Change maximum hourly capacity to 25.3 tph for group; incorrect assumption to split 50:50
EU68, EU69 and EU71: Change emission unit name to Paint Line #3, Paint Line #2 and Paint Line #1, respectively

Tank Orientation: ☑ Horizontal ☐ Vertical If Vertical, provide Maximum Liquid Height: *(ft)* _____ Average Liquid Height: *(ft)* 4.16

Shell Color/Shade: ☐ Red ☑ White ☐ Light Gray ☐ Medium Gray ☐ Aluminum Specular ☐ Aluminum Diffuse ☐ Other: _____

Roof Color: ☐ Slack ☑ White ☐ Light Gray ☐ Medium Gray ☐ Aluminum Specular ☐ Aluminum Diffuse ☐ Other: _____

Tank Type: ☑ Fixed Roof ☐ Internal Floating Roof ☐ External Floating Roof ☐ Pressure Tank

J.2C: For Fixed Roof Tanks:

Roof Type: ☐ Dome ☐ Flat ☐ Cone **Dome/Cone Height:** _____ ft **Average Vapor Space Height:** _____ ft

Is Tank Underground?: ☐ Yes ☑ No **Roof Condition:** ☑ Good ☐ Poor **Vacuum Setting:** _____ psig

Is Tank Heated?: ☐ Yes ☑ No **Shell Condition:** ☑ Good ☐ Poor **Pressure Setting:** _____ psig

J.2D: For All Internal Floating Roof Tanks:

Rim Seal Description: ☐ Vapor Mounted Primary ☐ Vapor Mounted Primary plus Secondary Seal ☐ Shoe Mounted ☐ Liquid Mounted Primary ☐ Liquid Mounted Primary plus Secondary Seal ☐ Shoe Mounted plus Secondary Seal

Secondary Seal: ☐ Rim Mounted ☐ Shoe Mounted ☐ None

Internal Shell Condition: ☐ Light Rust ☐ Dense Rust ☐ Gunite-lined **External Shell Condition:** ☐ Good ☐ Poor

Roof Paint Condition: ☐ Good ☐ Poor **Self Supporting Roof?** ☐ Yes ☐ No

Number of Support Columns: _____ **Effective Column Diameter:** _____ ft

J.2E: Deck Data for Internal Floating Roofs:

Length of Deck Seam: _____ ft

Deck Type: ☐ Bolted ☐ Welded

Type of Deck Fitting: ☐ Access Hatch ☐ Ladder Well ☐ Sample Pipe ☐ Sample Well ☐ Vacuum Breaker

Type of Deck Fitting:

☐ Column Well ☐ Roof Leg ☐ Hanger Well ☐ Stub Drain ☐ Automatic Gauge Float Well

Design of each deck fitting:
(diameter sizes, bolted or gasket covers, sliding cover or fabric seal, adjustable or fixed roof leg/hanger well and number)

J.2F: For All External Floating Roof Tanks:

Rim Seal Description:

☐ Vapor Mounted Primary ☐ Vapor Mounted Primary Rim Secondary Seal ☐ Vapor Mounted Prmary with Weather Shield
☐ Liquid Mounted Primary ☐ Liquid Mounted Primary Rim Secondary Seal ☐ Liquid Mounted Primary with Weather Shield
☐ Shoe Mounted Primary ☐ Shoe Mounted Primary Rim Secondary Seal ☐ Shoe Mounted Primary Shoe Secondary

Internal Shell Condition: ☐ Light Rust ☐ Dense Rust ☐ Gunite-lined

Tank Type: ☐ Riveted ☐ Welded

Roof Type: ☐ Pontoon Roof ☐ Double Deck Roof

J.2G: Deck Data for External Floating Roof Tanks:

Type of Deck Fitting:

☐ Access Hatch ☐ Gauge Hatch ☐ Sample Well ☐ Roof Leg ☐ Vacuum Breaker
☐ Guide Pole ☐ Gauge Float ☐ Roof Drain ☐ Rim Vent ☐ Other

Design of each deck fitting:
(diameter sizes, bolted or gasket covers, sliding cover, unslotted or slotted guide pole well, adjusted or fixed roof leg and number of each design)

J.2H: Emissions Data:

Attach SDS/Composition Analysis for Each Component Listed

Process ID	Component Name	Process Name (e.g. Breathing, Working, Cleaning, Flashing Loss(es))	Lost Emissions *(lb/1000 gal)*	Frequency of Occurrence	Determination Methodology for Each Type of Loss*

Section J.3: Gasoline Plants and Terminals

Indicate the percentage of one or more of the following modes of transportation for incoming liquid and outgoing liquid:

	Tank Truck	Trailer	Railcar	Pipeline	Marine Tank	Barge	Other (Specify)
Incoming Liquid Material:							
Outgoing Liquid Material:							

For Gasoline Dispensing Facilities (GDF) only:

Is the loading of gasoline storage tanks at a GDF located at an area source of hazardous air pollutants as defined in 40 CFR 63.2? ☐ Yes ☐ No

Is there the dispensing of gasoline from a fixed storage tank at a GDF into a portable tank for the on-site delivery and subsequent dispensing into gasoline-fueled equipment? ☐ Yes ☐ No

Maximum monthly throughput in gallons: _____

For Bulk Gasoline Plants Only:

Is the maximum calculated design throughput less than 20,000 gallons (75,700 liters) per day? ☐ Yes ☑ No

Is gasoline loaded into cargo tanks for transport to gasoline dispensing facilities? ☐ Yes ☐ No

For Bulk Gasoline Terminals Only:

Is the maximum calculated design throughput equal to or greater than 20,000 gallons (75,700 liters) per day? ☐ Yes ☐ No

Is the terminal located at an area source of hazardous air pollutants as defined in 40 CFR 63.2? ☐ Yes ☐ No

Does the facility load from marine tank vessel loading operations at all loading berths less than 1.6 billion liters (10 M barrels) of gasoline annually and of less than 32 billion liters (200 M barrels) of crude oil annually? ☐ Yes ☐ No

Does the terminal handle any reformatted or oxygenated gasoline containing methyl tertbutyl ether (MTBE), CF? ☐ Yes ☐ No

Indicate the type of vapor control device utilized: ☐ Incinerator ☐ Adsorber ☐ Other

Section J.4: Loading Rack(s)

Emission Point #: _____

Emission Point Name: _____

Loading Rack ID#: _____

Product Type	**Number of Lanes/Rack**	**Number of risers/loading arms per rack**	**Does the petroleum storage capacity exceed 300,000 barrels?** *(Y/N)*	**Time required to load standard size tanker** *(minutes)*	**Barge/Pipeline Unloading Rate** *(barrels/hr)*	**Barge/Pipeline Unloading Rate** *(barrels/yr)*	**Maximum Loaded** *(gal/hr)*	**Maximum Loaded** *(gal/yr)*	**Stack ID**	**Control Device ID**

Section J.5: Equipment Leaks

Emission Point #: _____

Emission Point Name: _____

This section is to be completed for all components of Volatile Liquid Storage Systems that may have leaks.

Equipment Type	Indicate the number of each type of equipment for this emission point		Emission Factor *(lb/SCC units)*		Source of Emission Factor	Total Emissions *(lb/yr)*
	Gasoline	Other (diesel, kerosene, etc.)	Gasoline	Other		
Valves						
Pumps						
Connectors						
Risers/Loading-Arm Valves						
Open-ended Lines						
Other						

Section J.6: Notes, Comments, and Explanations
Capacity changed from 2,000 gallon in air permit to actual 1,000 gallon installed tank
