PREFACE

This catalogue is a compilation of fish collections made by the Kentucky Division of Water Biological Section from 1976 to 1987. These collections were conducted during intensive surveys, Stream Use Designation (SUD) surveys, and Biological Monitoring Program (BMP) fish tissue residue monitoring. While the majority of the collections are representative of the stream sites sampled, some are only partial because of the nature of the sampling (i.e. passive netting) for tissue residue.

The collections are arranged by major drainage basins. Within basins, collections are listed by segment. An explanation of site codes is provided. All scientific names follow Robins et al. (1980. American Fisheries Society Special Publication No. 12). Site descriptions include stream name, date collected, site location and mile point, along with stream order and latitude and longitude in most cases. Specimens, except those used for tissue residue analysis, are housed at the Division of Water.

SITE NUMBER CODES

The first two numbers of the site code denote the major river basin. The next three numbers indicate the segment number as designated by the River Basin Water Quality Management Plan for Kentucky (303e) documents. The last three numbers delineate the sampling site number within the segment. Example: 04017001

04 - Kentucky River basin

017 - South Elkhorn Creek segment

001 - site number in that segment

The Biological Monitoring Program (BMP) sites are designated by a PRI number that is unique for each site.
