What is the National Flood Insurance Program?
The National Flood Insurance Program (NFIP) is a voluntary program based on a mutual agreement between the federal government and the local community. In exchange for adopting and enforcing a local floodplain management ordinance, federally backed flood insurance is made available to all property owners throughout the community.

The NFIP “stool” is comprised of four primary components.

State Role in the NFIP
The Division of Water (DOW) is the state's coordinating agency for the NFIP. In this role, the DOW establishes development and building standards, provides technical assistance to communities & agencies, and evaluates & documents community floodplain management activities.

When Do I Need A Stream Construction Permit from the state?
The DOW administers KRS 151, which outlines the requirements for obtaining a Stream Construction Permit for floodplain development. Stream Construction Permits are issued by the Cabinet pursuant to 401 KAR 4:060. Kentucky requires a Stream Construction Permit for any development in areas along or across a stream, up to the one square mile drainage area, and is not limited to the Special Flood Hazard Areas (SFHAs) as shown on Flood Insurance Rate Maps (FIRMs).

The state also requires that substantial improvements to a structure be based on a 1-year period in which the cumulative cost of construction equals or exceeds 50% of the structures fair market value. Substantially improved structures will be required to bring the entire structure up to current minimum NFIP standards.

DOW Technical Assistance
The Division's NFIP staff provides technical assistance to all communities in Kentucky through outreach materials, training workshops, periodic newsletters, NFIP presentations, and on-site visits. DOW staff have also developed the Kentucky Floodplain Manager's Handbook and the Kentucky Quick Guide to help guide floodplain management decisions. Please contact state NFIP staff for information on upcoming trainings and workshops.

State NFIP staff evaluates and documents all participating NFIP communities’ floodplain management activities. This is done via community contacts, visits, and assessments. A Community Assistance Contact (CAC) is performed by a brief phone call, email, or a visit with the local community’s floodplain coordinator. A Community Assistance Visit (CAV) is an in-depth assessment of a community's SFHAs and flood prone areas to help improve the community’s floodplain management program. It is followed up with a detailed meeting with the communities’ floodplain coordinator and local elected officials to discuss the community’s successes and opportunities for improvement.

National Flood Insurance Program
January 2017

The Local Community’s Role
Community participation in the NFIP is 100% voluntary. Each identified flood prone community must assess its level of flood risk and determine whether flood insurance and floodplain management would benefit the community’s residents and local economy.

Local Community’s Responsibility

- Adopt and enforce a local floodplain development ordinance
- Designate a local floodplain coordinator that is responsible for administering floodplain management requirements. The local coordinator is also responsible for ensuring that all state and federal floodplain management requirements are enforced
- Determine whether proposed development activities are in the SFHAs
- Review permit applications for all proposed floodplain development
- Issue permits for approved development in the SFHAs
- Conduct inspections on development in the floodplain
- Take enforcement actions for non-compliant development
- Interact in the appeals and variance process
- Keep records of all floodplain development
- Investigate complaints
- Maintain floodplain maps and other data
- Coordinate map appeals, map revisions, and Letters of Map Change (LOMC) applications
- Educate community members on floodplain management best practices and development requirements

Other Resources
Kentucky Risk MAP Portal
The Risk Map Portal provides a source for all of the Commonwealth’s floodplain maps. Use this application to view the floodplains throughout the State.

Answers to Questions about the NFIP
This book is intended to acquaint public officials and community residents with the National Flood Insurance Program. This publication is designed for readers who only need a basic understanding of the program. This book provided answers to some of the more frequently asked questions. Answers to Questions About NFIP

Why You Need Flood Insurance
Everyone lives in a flood zone. In high-risk areas, you have a 1 in 4 chance of experiencing a flood over a 30-year mortgage. But you can live miles away from water and still be at risk of flooding. In fact nearly 25% of flood insurance claims come from moderate to low-risk areas.
