IMPORTANT CONSIDERATIONS

MANURE STORAGE STRUCTURES: STACK PADS

LIVESTOCK BMP #10

Photo courtesy of Eden Shale Farm

Description:

A stacking facility constructed of durable materials to temporarily store solid livestock manure or other agricultural waste until it can be removed and properly disposed of on the land.

AWQA Minimum Requirements:

Construct stack pads to provide storage of solid animal manures until it can be properly utilized for fertilizer. Other management components such as manure storage ponds and filter strips may be used effectively with stack pads to reduce nutrient rich runoff from reaching surface water.

Recommendations:

Clean water should be excluded from concentrated manure areas to the fullest extent practical. See [Livestock BMP #18 Stormwater Management](#). Locate where prevailing winds will minimize odors. Locate close to manure source to reduce scraping time.

Topography will affect location, design, and amount of excavation.

Locate the greatest possible distance from residences, water supplies, and streams. Adhere to local and state regulations that relate to site location and design. Check soils, depth to rock, water table, and topography before locating site and designing structure. As an alternate to storage, you may include in the design an access under the pushoff for daily manure spreading equipment.
