IMPORTANT CONSIDERATIONS

STORAGE OF LIQUID BULK PESTICIDES

PESTICIDE & FERTILIZER BMP #5

Photo courtesy of Creative Commons

Description:

Protect water quality through appropriate storage of liquid bulk pesticides, including insecticides, herbicides, fungicides, rodenticides, and nematocides.

AWQA Minimum Requirements:

Locate storage facilities 100 feet minimum away from on-site wells and sinkholes, 200 feet from private domestic wells, 200 feet from springs and cisterns, and 400 feet from open-throated sinkholes and perennial streams. Sinkholes are defined in [401 KAR 5:002](#), which states sinkholes are “a naturally occurring topographic depression in a karst area. Its drainage is subterranean and serves as a recharge source for groundwater. It is formed by the collapse of a conduit or the solution of bedrock.” An open-throated sinkhole is a sinkhole with an internal opening or drain, including a cave, proto-cave, conduit, sub-conduit, or fissure, leading into the subsurface through which water and other materials can pass from the sinkhole into underlying solutional voids and conduits. Open throats may be air-filled or water-filled. For new Secondary Containment facilities of liquid bulk pesticides in undivided quantities of 300 gallons or more: •Construct

facilities of concrete or other impervious materials. •The use of underground storage containers or plumbing as (or used in conjunction to) secondary containment is prohibited.

Recommendations:

Develop a plan to deal with fertilizer spills, including spill site management and storage site cleanup. Store all liquid bulk pesticides in a dry, secure, ventilated area.
