E.C.G.

Date: March 21, 1983

Subject: Submission of Computer Printouts

RAM # 61

A significant number of applicants are utilizing computer models for demonstrating the performance and compliance of ponds, fills and other pertinent features of mine plans. Due to the volume of printouts generated through the use of these models, the Division of Permits has determined that only a single copy of these printouts will be required to be submitted with a permit application. Printouts must be complete unseparated originals containing a full listing of input parameters and results.

Submission of these demonstrations can be made within the original copy of the application or under a clearly labeled separate cover. Copies of the application which do not contain the printouts must include a cover letter clearly explaining (1) the demonstrations which were completed using computer methods and (2) how the required information was submitted. A brief summary of the printout results must be provided within the appropriate section of these copies.

If you have any questions concerning this matter, please contact Jim Adamson, Division of Permits at (502) 564-2320.
