

Commonwealth Of Kentucky
Mine Safety Review Commission
Order

Whereas, KRS 351.182(8) provides for a minimum ten (10) panel urine testing protocol acceptable for the establishment of drug-free status for miner certification under KRS Chapter 351, and further provides that "the remaining panels to be used in the urine test shall be set by order of the Mine Safety Review Commission no later than June 1 of each year," and

Whereas, the Mine Safety Review Commission has investigated and concluded that the following substances should also be included in the testing, as their presence is inappropriate for drug-free status under KRS 352.182;

Now Therefore, it is *Ordered* that pursuant to KRS 351.182(8)(k), in addition to the ten (10) panel test set out in KRS 351.182(8)(a)-(j), the urine panels shall include testing for presence of the following substances:

1. Mitragynine – commonly known as Kratom
2. Fentanyl
3. Synthetic Opiates
4. Synthetic Cannabinoids
5. 3,4-methylenedioxy-methamphetamine (MDMA) – commonly known as Ecstasy

So Ordered, this the 9th day of April 2026.

Hon. David B. Sloan, Chair
Mine Safety Review Commission
