IMPORTANT CONSIDERATIONS

MILKING CENTER WASTEWATER TREATMENT

LIVESTOCK BMP #16

Photo courtesy of Creative Commons

Description:

Manage milking center wastewater to prevent surface or groundwater contamination.

AWQA Minimum Requirements:

Develop and manage a milking center wastewater treatment system that is environmentally acceptable and prevents wastewater from contaminating ground or surface water.

Recommendations:

Combine milking center wastes with manure to allow for a common collection system for both types of waste. The milking center wastewater can be directed to a holding pond or pit which contains both manure and wastewater. The wastewater should bypass the stack pad and run directly to the holding pond or settling basin if one is used. A permit may be required. Contact the Division of Water for information.
